2589. Halli-S38 serious hum/distortion...

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-03-18 06:06:25 UTC
From: grtpmpkin32@aol.com
Message-ID: <20010318010625.05046.00000767@ng-mm1.aol.com>
Source record: 55383

Hi all-
Just picked up a very nice (cosmetically) S38, an original 38 with the six tubes and BFO, etc. It powers up, lights up, and I can even hear some stations under all the distortion, which also indicate that the bandspread and main tuning work fine. I replaced all ten of the capacitors with Sprague orange drops with all the right values, with no change in performance.
But that loud buzzing distortion is maddening.
Not being immensely endowed with boatanchor knowledge, I am looking for some help. I only bought it for $10 and it LOOKS beautiful, and was fairly dust-free inside, no bugs or burns or anything unsightly. Someone took good care of it but is it a tube? A bad transformer/pwr supply?
Any help, etc....
Linus

2599. RAF WWII Aircraft Radio sets R1155/T1154 - Schematics

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-03-18 11:00:24 UTC
From: vk2ua@yahoo.com
Message-ID: <3ab49251.12866443@news.zip.com.au>
Source record: 55409

I have found very little internet information on this set up which was used in most of the larger RAF aircraft in WWII (eg Lancaster, Sunderland etc). The R1155 receivers were keenly bought by hams and SWLs after the war (myself included) and are still popular with collectors.

To attempt to remedy this, I have posted on the web copies of contemporary Air Ministry coloured charts which show simplified circuits of the main units together with drawings showing how all the components (antennas, power supplies etc) fit together. There is also a wiring diagram of the inter-connection cables.

They can be found at

http://www.zip.com.au/~sb/r1155/r1155.htm

I hope this is of interest to some of you and if anyone can point to where I can find addtional information on these sets on the web, I would be grateful (eg Transmitter operating instructions).

Simon VK2UA

Could be a heater to cathode short in a tube. The other likely cause is a bad filter capacitor. The original is something like a 40-30-30 ufd 160V multisection electrolytic. If it's missing, it probably was leaking and was taken out. There is a schematic at BAMA:

http://bama.sbc.edu/hallicra.htm

Good Luck!

What a fascinating website for the nostalgic technical minded !

I'm certain many of us would love to hear a description, technical
or otherwise, by an ex- 1939-45 wireless operator of how the
1154/55 performed when in the thick of it. There must be some of
you left to tell the tale. Please pin a long or short message on
these walls.

I'm OK Jack - I'm in the dinghy !

Old Reggie.

Source record: 55424

Thanks to everyone for your help and really informative replies!
I need to address a few things here, namely my mistake about the 'transformer', since the S38 has no transformer.... doh! What was I thinking (is the green-ness showing or what?!?!)...
The other thing is, my tube tester is indicating that the 35Z5 tube is dead, not shorted (at least the shorting light on the Hickock tester isn't lighting at all on that tube) and I'm wondering about a replacement. Is there a cross-over tube for the 35Z5 or do I need to find an exact replacement?
I'm sneaking up on this one, with all of your help, and I really appreciate the replies I've received. Thanks so much!
Linus

2616. fs: 6907 tube and socket $35

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-03-18 19:01:09 UTC
From: Bill Noble <william_b_noble@no-spam.email.msn.com>
Message-ID: <9930i7$2gmn$1@nntp1.interworld.net>
Source record: 55426

I am trying to clean up my junk pile (or is it junque?). I find I have a GE 6907 tube, with it's nice sceramic and aluminum socket and the plate cap assembly (that has an adjustable air gap cap and a resostor on it). This is used, darned if I can remember what it came out of, and I certainly don't need it, so it's time for it to find a new home. I don't have an easy way of testing it, I measured the filament at 1.3 ohms which seems reasonable enough.

I find this tube listed on teh web for $40 to $98, and the socket at $21. I'll be happy to accept offers. There are also some other goodies, including tubes and some microwave stuff listed on my web page below.

if interested, respond to william_b_noble@msn.com

One of the biggest problem with the ham radio population is hams!

I wanted to be a ham ever since I started playing around with walkie-talkies in 1973, but it took me several years and a move to a different state before I actually met a ham.

Also, the current community I live in has a restriction on antennas because, apparently, because a ham a number of years ago behaved rather badly, so the community banned all antennas over 10 ft. high. One can get waivers now, but . . . another black eye for ham radio in the mind of the general community. And if we use PRB-1 to fight their rule, the community assumes we are still a bunch of jerks. Definitely a lose-lose situation.

Somewhere along the way, we've basically lost our appeal to the younger generations. I'm 43, and am usually one of the younger hams at any gathering. I've personally tried, one-on-one to interest kids in hamming, but they want something internet-like. Voice only, or worse yet, CW, bores them to no end. Communicating with the far ends of the world to them is only a matter of picking up a phone and dialing the right numbers. I remember when communication with far points was a matter of skill and luck and equipment.

Unfortunately, I'm now part of the problem, myself. I'm a computer programmer who starts to work early and gets home late, and move a good bit. Involved in the community? Not very much. Most community involvement involves couples and families, and that leaves me out, anyway.

I'd stick with the 35Z5. I think the 35Z4 is the same without the pilot light tap. If you're sure the 35Z5 is shot, you can use it's base to make a servicing replacement. Carefully break out the glass bulb and desolder the wires. Put a 240 ohm 10W resistor across the filament pins and a silicon diode between the anode and cathode pins. Be sure to meter the AC current and don't leave the radio unattended with this set-up. You lose the pilot lamp with this and the B+ voltage will be higher, but its durable and cheap. The rectifier tube acts as a fuse on series string radios. A clever idea, back when there was an endless supply of rectifer tubes.

Hello everyone.
OH/KB9YXM here.
I wanted to let everyone know about the Finnish Club station OH8TA's Expedition to IOTA island Hailuto in the Gulf of Bothnia off of the Finnish coast near Oulu. We will be operating for three days from the university of Oulu's marine research station on the island.
We will be operating on HF VHF and UHF. The frequency for 6 meters will be 50.110USB. For other bands and frequencies please send an email message to oh8ta@oulu.fi
Operating conditions for 6 meters will be a Cushcraft 3 element Yagi, Yaesu ATAS-100 with GP and counterpoise, Yaesu FT-100@100-500Watts. The Yagi and ATAS-100 will be mounted atop the lighthouse station at 30-35 meters above sea-leval.
The dates will be April 6-8.

KB9YXM is a US operator currently living in Finland and very active on 50Mhz and above.
QSL to KB9YXM will be 100% via OH8TA

I think you have hit the nail on the head, Charlie.

The world has changed and the magic that once belonged to radio has lost its appeal to the majority of our population. There are still a few people that appreciate the "magic" of radio, but not many. The same is true of aviation, automobiles, etc. The novelty has worn off.

Couple society's loss of enthusiasm with the requirements for antenna space and the fact that our operations often prove to be a nuisance to others' electronic equipment and it's a miracle that we are permitted to operate at all.

What can be done to improve the situation? I don't think much can be done at all. Perhaps we would be wise to enjoy the time remaining for our hobby and make it a point not to be too cantankerous to those with other agendas. We amount to no more than a small bug in the grand scheme of things.

No, I don't feel I am being pessimistic. I love radio, or more precisely, communicating via EMR, but perhaps it is time to be pragmatic. Nothing lasts forever, not even life itself. Maybe that is why we should value it as much as we can while it's here. Instead of fighting over who is a "real" ham and who is a transplanted CB'er, we should appreciate all of the individuals that enjoy communicating via radio. We are a dying breed.

2640. FS.RACAL HF.Tx Driver MA1720

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-03-19 09:26:27 UTC
From: "radio-exports.com" <info@radio-exports.com>
Message-ID: <tbbk3ba1mojee6@corp.supernews.co.uk>
Source record: 55350

If you are looking for a high quality,very stable, versatile, HF Transmitter Driver,we (radio-exports.com in the UK),have just what you need.
The RACAL MA1720 Transmitter Driver provides full coverage from 1 Mc to 30 Mc's in 100c's steps.
A notable feature of this unit is the high stabality of the output, from the all solid state circuitry .
Locking of the selected synthesised frequency is achieved in approximately 10 milliseconds.
Operational facilities selected by front panel controls are LSB.,USB.,ISB.,KEY,AM.,CW.,RTTY.,RTTY Test,VOX & PTT.
The usual facilities are incorporated for receiver muting,antenna switching,receiver monitoring,drive unit side tone to receiver etc.
Output is adjustable from 25mW to 200mW and the output impedance is 50 ohms.
The unit,which is 7" high, is designed for standard 19" rack mounting.
Power requirements are 100-125 or 200-250 volts ac.
This is an extremely well made and versatile unit.It is in very good condition and is in working order.
The price, which includes the cost of packing and air freight to the USA, is $795 US Dollars.
If you would like more kinformation,or wish to order,please contact Graham Leo info@radio-exports.com
Thank you for your interest.

Truer words were never spoken. As a technical hobby, where skills in
electronics were obtained, the hobby is dying.

As to the "personal communication" aspects, even CB (with no license)
has greatly diminished use.

The problem is NOT morse code or testing, it is a social change. Radio
no longer has "magic" to 99% of the people who would have shown some
interest in prior decades. It is not a correctable problem, and
eventually the hobby will die as a technical hobby and training ground
for skilled communications people.

It'll happen, and there is nothing that can be done to change that.

Salvaged a meter from the remains of a DX100. The meter is double scale
0-50 and 0-10. Don't know if it was standard with the DX100 but that's
where I
got it. Checked it out and it works and is not sticky.

Anyone need this? Make offer.

Perhaps these views are correct. Lets assume they are. That being the case...what can be done? Why sit there and bitch and moan and offer no solution?

How about a major change in what Amateur radio can do. You want to attract the youngsters???? Ever hear of the ISS, the international space station? Tell me how you can talk to it via the internet....WITHOUT RADIOS???. Thats one idea.

It isn't going to be too long down the line when we have outposts on MARS and the MOON. No wires there either.

You ever hear of public service? Traffic nets?? etc.

How about Ham radio that interfaces with the computers for some LAN stuff?

Just some thoughts. Change is good. Use it to our advantage.

Gee, I've been struggling with learning Morse Code for the past three months, working on going the whole way to Extra from my Tech license, and looking forward to it! But I'm a little concerned here. We have people who hate newcomers because they are Tech's, people who hate newcomers because they are only starting at 5wpm, and people who hate newcomers because they apparently didn't pass a tough enough test.

I think that is enough disdain to make a person wonder what they are getting into. Certainly not a welcome mat thrown out here! Imagine a person thinking about possibly becoming a ham. Say they come to this group and simply read the messages. Does this seem inviting? Not very. Some of the messages are filled with enough vitriol to send some of the more timid running to take up a more friendly pastime, like playing ice hockey.

Perhaps some of us need only to look to ourselves to see why there may be troubles within the amateur radio service.

Hang in there, Mike. You are welcome into the ranks of Amateur Radio (capitals here) with no disdain, animosity or judgment. For every vocal comment to the contrary, I think you'll find many more hams who are anxious for new blood and willing to lend a helping hand; it's what the hobby is all about; it always has been that way. Unfortunately, too many of the "old timers" tend to be shy and silent about growth in the hobby, but amateur radio always was a melting pot of differences, ages, philosophies and backgrounds. I may or may not agree with your politics, but I respect you as a person and a fraternal member of a wonderful community and that's always what made this hobby great.

I've always been amazed at the sincerity and openness of the amateur radio community. Someone on this newsgroup voluntarily sent me a couple of spare crystals at his expense when I needed them; another eagerly copied an instruction manual and schematic for an older piece of test equipment I was working on. It was all voluntary, with no expectation of remuneration or recompense of any kind. I think you'll find, by and large, that this community is like that. I believe that the brotherhood is still there and I believe it will rally when it really needs to.

Am I overly optimistic? I don't think so... I think there are enough folks who care about this hobby to make sure it doesn't end.

73...

Stu, N1SC (ex K2IOC, W6CUY, NE6D)

2655. Hallicrafters IF transformer questions

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-03-19 21:14:24 UTC
From: "Scott W.Harvey"
Message-ID: <995srg0ml2@drn.newsguy.com>
Source record: 55365

I currently have on my bench a Hallicrafters S-40 shortwave receiver that was purchased from the estate of a deceased Ham radio operator. This radio is in bad shape, but it's complete and should clean up nicely (I've seen far worse).

This radio has problems. When I got it, the I noticed the power transformer was replaced with one a bit larger than the original one. Whoever did this didn't do a good job. The 80 tube was the only tube that would light and the set did not play at all as a result. I was able to wire it correctly so that all the tubes lit up and it would work somewhat. The B+ produced with this arrangement is on the high side of what I would consider reasonable- It's about 75V higher than the schematic calls for. I added a resistor in series, which brought it down to a comfortable range and it worked, but not very well.

The original symptoms that I had were no reception of AM BC stations at all, and very anemic performance on the shortwave bands, the best being band #3, 5-15 Mhz. Performance is so poor that the volume must be turned all the way up to hear WWV at 15 Mhz at a normal listening level. (The audio works fine- I injected a signal at the volume control pot, and there is plenty of volume) The lower end of each band is virtually dead- no reception at all. Re-capping, Re-tubing and alignment only produced a very marginal improvement in performance, so I have now started working on the various trimmer capacitors. Most of them have plates which are very tarnished, and some have a bit of corrosion on them as well.

The first thing I tried was rebuilding the first IF can. This consists of a couple of coils with two trimmer caps on top. I removed the IF can and took the trimmer caps apart, cleaned the silver plates of each one with a nice clean pencil eraser to get the tarnish off, and then reassembled them and put the IF can back together again. I have had great success doing this in the past with Zenith IF cans that were acting up, but this time, It didn't work. When I put the rebuilt IF can back in the radio and fired it up, I got nothing- the radio was completely dead except for audio hum. Injecting a 455 Khz signal into the antenna inputs produced a VERY faint signal that was audible only if the BFO was turned on.

Naturally, I thought I must have made some mistake when I put the IF can back together, so I took it apart again and double-checked. The coils appear to be wired correctly and have continuity and the correct resistance. I checked the trimmer caps with a capacitor meter and they check out fine and vary nicely and consistently as they are tweaked. I marked all the connections prior to removing the can, so I am certain that it is installed correctly. To make a long story short, I tried everything that I could think of to determine what went wrong and I'm just stumped-It should work, but it dosen't.

Finally, in desperation, I took a 1st IF can out of a junker Zenith H615 AM radio chassis that I had lying around and put that in the place of the rebuilt

original, and lo and behold, it worked! The radio isn't any better than when I started (still anemic), but it is at least receiving signals again.

Now, I have a couple of questions:

1. What could I have done to the original IF can to render it non-functional? Are these hallicrafters cans just really touchy or what? I'm very reluctant to proceed further with the other cans until I can figure out what I did wrong with this one. Ideas, anyone?

2. There are a lot of trimmers in this radio just like the ones in the IF can I tried to rebuild, and most of them are tarnished and borderline corroded. Past experience has shown that these can cause all sorts of weird performance problems, so I would like to clean these up and rule them out as suspects. Is there any way to do this without taking them apart and/or removing them from the radio?

As I said before, this set is in rough shape, but it's a little too nice to relegate to the shelf or junker pile. I would really like to get it going again-It should be a fine radio once all the bugs are worked out.

-Scott

You know, when I was a young lad, I always had an interest in things electronic and especially radio..... Once I actually found out there was a hobby called Amateur Radio, I wanted to become one of them. However, other things got in my way, like growing into a teenager with wild oates to sew, like work, like motorcyles and cars, partying etc etc.....
I was led astray for many years by the above but once I got my head sorted out and settled down (not throught marriage etc), I refocused, once again on the radio world. I got into scanners and receivers. CB radio was always a poor alternative to what I really wanted but it DID stir up the blood AND I did get in a huge amount of international contact AND I loved it. The only thing that really marred the CB excursion was the absolute idiots that persisted in interferring whilst on the air with their stupid noises and comments. These guys will always be losers in the radio world as they lack the self-discilpine needed to move on to something more serious and so they take it out on others a little more dedicated to their radio hobbies, by acting childishly.
Anyway,,, a friend who worked in and around government circles in the radio world over here,, saw that I was always interested in radio and asked me why I don't go for the Ham license. I porcrastinated for a few years then one day whilst helping him to install a few repeaters, with his encouragement I decided - I am going to get that license, come hell or high water.
I was always dead keen and good at mathmatics and knew a little on basic circuitry and electronics - Why Not???? I mean to say, I always wanted to become a "Ham"....
I enrolled in the very next radio course at the local Ham Radio Club. This went for 6 months - every Tuesday night for 2 hours after dinner. As it turned out, I started telling the tutors how to work out many of their own equations and could often work out the results in my head, quicker than them with a calculator. No!!! Not brain power,, just a good memory...
I studied for more than an hour in the morning before work (from 5am - 6am) and another 3 hours after dinner (apart from the above Tuesday nights) every night and mostly all weekend for the next six months. I got together with a few of the others on the course who were having troubles keeping up and helped them in the art of rememberring things, like equations etc. They knew the "radio" stuff but the mathmatics was getting to them....

Anyway,, came the BIG day and we all went into the exam room and sat down for the "up to" 3 hour long exam. I lasted just 28 minutes and was out the door. All that studying really payed off.....
I missed out on just one of the theory questions and got all of the law questions correct - a 99% pass rate. Once again, NO!!! not raw brain power, just a good memory.

Once the license came through the mail I was really proud, REALLY proud of myself and went out and bought some gear. The license entitled me to VHF/UHF only as to get the Full license, you have to do the dreaded CW test. For now the VHF/UHF license would do though.
I enrolled into the local radio club and was as happy as the old pig in sh_t for a while..... However, it was at the AGM (Annual General Meeting) that I got really put off the club along with a huge handful of some other more senior Hams.... The club was sort of split into little factions and each of them was only interested in their own little empire. All smiles on the outside but out came the knives at the election of the new club president etc...
I couldn't believe what I was watching as the whole club virtually split down the middle... To be honest, I personally think that a few of the older members just don't like newer younger members. Even a few older guys that sat the license with me said the same....
I too am 43 yrs and am every bit as self-disciplined and serious as anybody when it comes to my hobby... I even threatened to report a friend for illegally using another hams callsign and purchasing equipment, as he didn't have his own ticket and was constantly calling me now that I had mine. I never replied to him on the air but emailed him and told him on many ocassions to stop or else...
This went on for months and became very annoying. As soon as I popped up on the local 2m repeater, there he was calling me. He even followed me to more distant repeaters. I trasmitted from my base while he would drive to a nearbly hilltop and use his handheld. How I never replied to him in this time, I will never know.
He and I were both going to sit the exam together but he was just too layed back at the time and started calling me names when I got mine.... I also said that I would help him through the next exam but he only replied to that suggestion by telling me I was a "Know-all" and a few other names etc..... That was when I was going to report him. No not a case of 'tit for tat' but more that I told him that once I sign that dotted line, I would live by the rules... I still do.

In the last handful of years since I have been on the air, I have noticed that many older hams live in a world of their own with their head in the clouds. One big fault is that they think that all younger hams are nothing more than ex CBers and not of the blue blood so to speak and refuse to have anything to do with you if you don't have your CW pass...
I have absolutely refused to do the CW course as I cannot see the sense in torturing myself for another 6 or more months, then to sit the test and hopefully pass,,, only to NEVER use this outdated mode of dots and dashes. I truly can't see the point in it. Of course this puts me right off-side with "those types" who have passed the test. Honestly, some of them think their turds don't stink. I just stay right away from them. I quit the club and moved on.
HF ham radio is going downhill very quickly here and its because nobody wants to rack their brains for this ancient ritual called CW or morse or whatever you want to tag it. I have voiced my opinion on the matter with the correct authorities but they are all from within the "blue blood"

society and will have nothing to do with it. Oh ,,,, They did drop the number of words per minute needed to gain a pass (I am not sure from what - to what) it is now but I still think it's like bandaging an open wound rather than getting it stitched up....
In my opinion... CW needs to go,, just for starters. Then a few of the ancient Old Boys need to be axed and some newer thinking needs to be injected... The internet and cellphones are killing the enthusiasm here and the great gods of the radio world over here cannot see through their fogged up glasses.....
Also, in my opinion, anyone who thinks that CW actually has anyhting to with Ham Radio (apart from a nostalgic reminder of its roots) then they are part of the demise and need to re-evaluate their outloooks on Ham radio. I am not saying that CW should go altogether but it should not be a part of any testing.
I did download a few CW programs from the internet AND I started to learn a few strings of dots and dashes but I just cannot mentally understand why this ancient ritual has to be used in the testing procedure. It is for enthusiasts only. It reminds me of blood rituals that some people go through to get into some occults. That type of think is for that type of person.
NO insults to those who like CW, of course. BUT it's time to move on.

I am not sure if this is a worldwide trend or not but I do know that unless something is done quick-smart, then Ham Radio may well disappear from the face of the earth before you and I feed the worms. New membership here is down to about one-quarter, one-fifth of what it was when I went through. That was only 6 years ago.......
What has happened since then...? You and I know what because we are communicating via it right now....
Many of the older hams don't really get into the internet so they don't see how it is stealing prospective new members from the hobby.
At a guess I would say that there are many jealous eyes just watching and waiting for Ham radio to lose the use of many of their frequencies so they can get their claws into them....
We had better not loose any of them or they will be gone for good!!!!!

Hi Mike,

People always resent seeing something they worked for being "given
away", although I accept the lowering of requirements as a reflection
on the change in technical perspective.

I don't resent newcomers at all, or feel bad about them.

What I feel bad about is the devaluing of my license. Factually,
extra class tickets are not extra class any longer. They have been
downgraded. That isn't the fault of anyone except society as a whole.

The same thing happened to the First Class Commercial ticket. The same
thing happened to degrees in our schools.

I'm not complaining, that's just the trend in everything today. It
won't fix the lack of interest, it won't speed it along. It is the
lack of interest in how things work....and in doing work....by
most people today that drives the results....not the other way
around.

Someone said why not offer a way to improve things...but no one can.
It is a social issue, it isn't going to be cured by letting one peson
out of ten thousand or ten million talk to someone orbiting in space.

All the bitching in the world, or all the suggestions offered, won't change that. It's a fact of life, not a emotion. People as a group have to get excited about learning about how things work, and making things work or it won't change. It isn't WHO we talk to, but rather what we talk about, that has changed.

I have a maxtrac 300 mobile radio UHF version that is programmable via
the
mic connector. I need to change some of the channels and need a program
to talk to the radio. Apparently there was a russian site that had
some of the software, but they have gone offline. I am willing to write
software
for windows or linux if I can locate the interface specs and cmd set for
the
radios. Can anyone help?

So keep struggling, like the rest of us did. Don't worry about the A-holes out there. They are just jealous and ill because they had to pass the code test.

If the truth be known there has not been a real code test since the VE's took it over.

I NEVER took a test under a VE. I took it all under uncle Charlie. And Im an EKTRA....Big deal. DOn't make me a better ham. Just makes me more diversified. In July I'll be a ham for 40 years. Another big deal....see what I mean?

Welcome to ham radio. Again...don't worry about the idiots.

Source record: 55376

Ive decided to part with my stored beautiful TS830S and all accessories. It was the very last of the production run. Condition of all items are a 9.8 and includes original boxes and manuals. As follows: TS830S Gold with 2/ 500 hz cw filters, full output as well plus a full alignment was done by a certified technician. Digital VFO230 works perfect with box and manual. The SM220 Scope with the BS8 panadaptor, manual, and box. The matching SP230 speaker, box and manual. MC50 microphone. This rig has been hardly used in 10 years It has always been well maintained plus it has been stored totally the last 3 years except for periodic fireup, testing, and dusting. I actually would like someone local to see it and test it out near Boston. Asking $1200.00 for the entire package or closest reasonable offer + shipping. I will not break up any items and I am not in need of any swaps at this time.(orders from the boss-hi!) Thanks and 73s Lew K1NDV paypal is ok too

PS-I think I have a shop manual too and would throw that in.

Ed --

It depends on what you mean by "we". If "we" is the average ham in general, I don't think we are really a dying breed. I would say that "we" are an evolving
breed. Ham radio has evolved from what it was years ago, and that is the natural progess of our technically based hobby. This is to be expected, and desired.

If by "we" you mean those of us that would rather tinker with old radios and nurse
them back to life, then yes, I concur that we are a dying breed.

I don't think amateur radio will ever completely die off, if for nothing else than the
reason that we can provide emergency communications as a public service. The
more our communications networks become integrated, the more fragile they become.
Look at any of the recent disasters in which hams have provided emergency communications;
why weren't cell phones or the internet used? The answer is that the infrastructure
for both of these technologies was knocked out. It will only get worse.

Ever hear of "information warfare"? Consider how our integrated communications are
suseptable to viruses etc. Think this is an unrealistic scenario?
Think again. War is no longer as we think of it in WWII or Viet Nam; people fighting on a
battlefield. It would be far more beneficial for a potential advesary to cause us massive
economic damage by shutting us down for a few days (if not longer) than an actual
physical attack.

God help us, but a well placed tactical nuclear weapon could shut down a sizeable portion

of our comm networks. That might take out a lot of ham gear too, but I'll wager we hams
up and running in a short time. Gads, are we actually at the point in our world where we
need to actually seriously think of EMProofing some part of our gear?

Finally, during a disaster, Joe and Jane Sixpack don't think to keep an emergency
communications system up and running. We in the amateur community do.

It is up to the Amateur community to sell itself to the public for what we can do to serve
the public. And, regardless of what particular facet of ham radio an individual likes (CW, SSB,
PSK31, BA, Computers etc), we all need to be prepared to render this service when needed.

Just my $0.02!

Mark K3ZX

I have a Hammarlund HQ180, the frequency dials are in good shape and are still white, but they have collected a coating of dust over the years. Because of bad experiences cleaning other vintage gear I would like to hear from someone that has actually cleaned these dials and can recomend a method that will not damage the dial markings.

Hello Al,
I also have an SX42 that I am getting ready to power up after a long hiatus.
Can you tell me what cap could destroy the power transformer. Is it the input
and output filter electrolytics (C113 and C116)?
I understand the 0.02 ufd coupling caps to the 6V6's (C109 and C112) should be
replaced as they could damage those tubes if they leak too much dc bias.
thanks
bernard

you need to isolate the problem..
if you hear wwv then touch up the if trimmers for max volume..
next check to make sure the screen voltage is up to par..
old screen grid resistors have a habit of increasing in value but not
opening...
IF xfmrrs rarely need to be taken apart unless the set was submerged and
they got salt, sand etc in them..
do you have a signal generator and vtvm..
if so start working back from the detector ..
better yet if you have a signal tracer or scope..
also check the avc resistors and caps..
good luck
hank

Source record: 55391

My small experience with ruining dials (haha) has led me to go by the simplest idea: find the softest cloth you can, and use warm water, JUST water, first. Don't use any cleaners like Fantastic or Windex, just use the water. Go slowly and don't rub too hard, just wipe the surface evenly and lightly. It takes longer to get at all the grime but avoids the damage caused by more abrasive action.
You could also use warm water and VERY mild soap/detergent, but try just the water first.
Then, use a dry cloth (same softness) to wipe away any streaks or spots left by the cleaning.
There may be some more stubborn dirt or streaking, but if you can live with it, do so. I'd rather have something that is old actually LOOK old and not be spotless, than try to get it spotless and make it worse.
At any rate, the warm water/soft cloth technique has worked for me (ever since I wiped away half of an RCA junker dial with Windex and a sponge.... still cringe about that one!).
Good luck-
Linus

It also doesn't help that so many existing hams seem determined to run off anybody who wants to join, or does join, this service. For example, the resistance the codefree Techs have faced is more than enough to drive almost anybody away. I've never personally experienced such pervasive, and incessant, hatred in my entire life.

Richard McCollum wrote:

> repeat after me: Usenet is not amateur radio.

This is not limited to Usenet, Dick. I've seen what he describes throughout the ham community - club meetings, on-air contacts, ham fests, and almost anywhere else newcomers run into other hams.

Heck, I've even seen this in action recently at a local civil defense meeting. An Extra was promoting a certain civil defense procedure involving hams and suggested during his presentation that Technicians be excluded (no reason given). Had I not been present to speak up, and had I not once worked for this civil defense office, I'm sure he would have gotten his way.

Whatever the case, Usenet doesn't exist in a vacuum - the negative opinions about newcomers voiced here by older hams (older as hams, not age) remain with them outside of Usenet when they're participating in "real" ham activities. And the anger, and hurt feelings, because of the opinions voiced here remain with the newcomers outside of Usenet also.

Good observation. :) I personally think that the level of technology has gotten too high for our own good. I am not all that old.. and when I was young, preteens to mid twenties, people were still curious about how things worked.. kids took things apart (and attempted to put them back together) just to see what made them tick. In the past 25 years or so, technology has reached a point of everything becoming basically a "black box".... which is to say, if you put everything in a VLSI chip, it's not easy to know what it does, or how it does it. I'm sure many of you built crystal radios when you were kids.. now, you can't even find the parts to build them (except the cheap, worthless kits at RS). Also pretty sure that you opened up a table radio or two (or a pocket transistor radio) and played with the IF and RF circuits to see what they did. (I opened my folks brand new table radio, $59 1965 dollars, and pulled out all the tubes to see what they were..... I didn't know there was a tube diagram on the bottom of the radio, so put them back from memory... this resulted in a $12 repair bill and an ass beating..*ggg*)

Now, if you open a radio.. you MAY see a variable capacitor.. but everything else is IC and/or ceramic/crystal filtering... (which, btw, offers a very BAD sound compared to an actual LC tuned circuit)... no wonder no one cares anymore... there's nothing there to gain anyone's curiosity.... :(

Since when is giving an opinion to be considered bitching
and moaning? If your house was on fire and I noticed it
before you did, would I be bitching and moaning if I told
you about the fire? I guess I know what to do if this is
ever so. I surely wouldn't want to disturb you by laying on
those negative vibes.

There is no solution that would enable us to reacquire the
magic that has been lost. It occurs for only a certain
period of time during the development of a technology and
cannot be recaptured.

I used to work on cars as a teenager for hours without end.
I'd hate to see a kid trying to do that today with today's
cars. It just isn't within reason. It's not the kid's fault.
Technology has changed cars, just as it has changed amateur
radio. We are merely stating a fact.

In the respect that you have mentioned, nothing has changed
at all.

Ever since I can remember, hams have been just like every
other group of people I encountered throughout my life. Some
are friendly, some are shy, some are curmudgeons, some are -
well, you get the idea.

Get this notion out of your head that you have joined some
huge fraternity of pious people that belong to a secret
society and who will gladly embrace anyone with a ham
license. It may have been that way in the spark-gap days (I
wasn't there), but it hasn't been since then. Yes, there may
have been (and still be) clusters of hams that behave this
way, but they are the exception.

Get your expectations in line with reality and you will
enjoy the hobby much more. Hams are just people - like
everyone else. No more, no less.

Some of the attributes ascribed to "geezers" are part of the
natural aging process. With any luck at all, you too may get
to the aspired rank of "geezer". Wouldn't it be nice if
those of younger years and clearer minds had a little
compassion for someone, such as yourself, whose mental
acuity and physical deterioration has affected their outlook
on life?

As I have stated elsewhere, in other posts on this thread,
there are curmudgeons, or worse, in every venue life offers.
Unfortunately, it only takes one to sour someone's
afternoon. I wouldn't take it personally, but would look for
another contact with someone that wants to communicate. Like
me, for instance! I don't care if you know the code or not.

The politicians likely were paid off as usual, and allowed this.
224 acres !
Developers are tearing down the old Lockheed Martin, Grumman, Sperry, and former old UN building off Lakeville road in New Hyde park NY.
What once landed a man on the moon is being thrown down huge 2 city block 80 ft deep crater
(they excavated the toxic soil over the past 2 years).
Scopes, Power Supplys, must be tons of RF and other strange looking equipment I never seen
(Most sledge hammered or high dropped).
No auction, No public sale.

Sad day in Long Island.
I did manage to run with a Hickok 3 meter Tube tester, HP Freq Counter, Lafayette HA-230 and went back for a TEK 553
before being spotted.
The place like a nuclear bomb hit !

I have three Yaesu FT50RD hand held transmitters.

One is a 7 . Buy it for $160.oo.

#Two is a 7. Buy it for $160.oo

#Three is a 9. Buy it for 170.oo
All three units have original box and green serial number certificate.
The prices include shipping, handling, and insurance.
Reason for selling: Retired and Tooooo many handhelds.
They won't last long at these prices.
Guaranteed to not be D.O.A.

I'm already age-qualified, Ed, but I like to keep my mind open to the natural progression of change. It keeps me way behind my physical age. More folks ought to try it sometime. It'll make them feel good about themselves and the world again.

How true! I've only received my license recently after being away from radio for 40 years. Yes, I read the book and did the internet practice tests, but that gave me book knowledge, not the practical knowledge only an "Elmer" could provide. Sure I'm licensed, but it's gonna take me a long time to learn anything about this hobby! Needed info that was regularly shared in the days of olde! Let's stop bitchin' and start keeping up with the times. And for you "Geezers" - how about realizing that you are the masters and the youngsters can't take that away! But true masters readily pass along the knowledge and experience they've accumulated in all their years!

Another valid statement by Dwight Stewart. Now all you that love to badmouth the 'new guys' I challange you to pull out a QST. Check out the articles concerning emergency and disaster communications. Check out the calls of the operators....

Notice how many 'new guy' calls are there? Now check the database and see how many are 'no code geeks'.

What have you oh no it all old timer done FOR THE SERVICE LATELY???

Now shut up.

Thats true...but...most new comers seem to think they know it all. Perhaps both groups need to knock it off and pay attention to whats important...keeping Amateur Radio alive and viable.

Look folks...this argument is not new. It was the same when I got on in 1961. The difference was I was willing to listen, and some were willing to teach. See my point?

Dwight, if you think it thru there are bits and pieces of this picture that do not make any sense. You are getting pervasive and incessant hatred from a group that by and large could not agree on lunch, when to have it, or the merits of pastrami on white with mayo. HF amateurs could not qualify as an armed mob let alone an army. Why might this be??

Since its inception in the early 50s the upgrade rate for Techs has been about 15% at best. This is an entry-level license?

Yes it revolves around Morse testing, not however Morse itself. The reality is that in most HF stations the key exists to allow tune-ups (it's a bitch on SSB) and precious little else. Determined dittyboppers would much rather see no-code than 5 wpm for the good of the mode. You learn so many bad habits at 5-10 wpm that zero is a better starting place. So what is all the flap about. How are they related?

Better yet, walk into your club with the 5wpm cert and the tension level will drop about 40db. You are no more savvy about anything than you were before and have earned a learner's permit to dittybop. Why? Pass Element 3 with the code cert and you become a part of the woodwork.

It is not about VHF, it is not about operating practices, it isn't about age, and those who value their seniority get about as much flak from their contemporaries as they get from you. It is all about a lousy code test and at 5 wpm at that. But the same problems existed when it took 5 for the Tech and General was 13.

The fact on the ground is that for at least the next five years HF Amateur licenses are going to require an inconvenience called a code test. We can argue shoulda coulda hafta from now on but that is the reality. The 15% I

mentioned have long since downloaded Morse Academy from http://ah0a, and blunderfutzed their way to success or are doing so in silence, calmnity, and dignitude. These guys you don't hear from long enough to generate pervasive hatred. Hmmm.

So knowing about the success rate of Techs in general for 50 years (and incidentally being one of the 15%) just what is my ethical duty when he walks in to the club, the restaurant table, or my life seeing the call sign plates? The fresh newbie unless he lays his freeband stories on me as if I should give a shit will get nothing but positive ego-boo. After 90 days he gets the prod in the ass to get going with the code. At somewhere in the 6 mos to a year, he gets written off as one more loser swallowed by the Tech trap. Sorry if it bothers you but that is the size of things. In the days of 5-year licenses the word was that the only dishonor to a Tech was renewing it.

Now we come to Lifer Tech Syndrome. When the decision is made not to pursue the code for whatever reason -- remember that you do have something of the Cathedral Problem here; the OTs did pass a more substantial code test so you are unique -- strange things seem to start to happen. Now I am over 25 years since my Extra and forever since the Advanced (never held a General) so my viewpoint may not be among the best but from this exalted pulpit it looks like things in the following categories seem to happen to those afflicted:

Morse is defined out of existence as a 'legacy mode' and pissed upon at every opportunity. The Lifers never miss a chance for Morris Kode.

Great and lengthy discussions occur about wonderous digital techniques none of which ever get built.

Great mythology gets built up and believed about OTs, Wouff Houng rituals, the nasty ARRL (one of the world's truly clueless operations) and the vast conspiracy to deny the codeless their due.

Any one who ever passed 20 must be attacked, unhorsed, and mugged. Even tho we see thru the self-deception it does cause us old guys to get a little testy.

Vast effort is expended at the peripheral aspects of the hobby, every publication is memorized, and periodic pilgrimages taken to Dayton and Hiram Percy Maxim's grave.

When prodded about the code requirement they scream "Bigot" and worse.

OK, the view from the other side. A lot of us read a good part of the frenetic activities of the lifers as a big smoke screen to cover their unwillingness to simply clear the 5wpm hurdle and move on. When faced with self-deception the OT has an ethical problem: people who go along with and encourage unrealistic behaviors are known as 'enablers'. Most of us are of an age where we have dealt with alcoholics, addicts, or simply loafers. We do not play the game and in fact can not without becoming part of the problem. Kind of like talking with pirates on 10 meters.

Are us OTs a bit quick on the trigger? Yes, more than likely. Do we simply define Techs as lifers when they are merely slow to grasp reality? Certainly.

Are we killing the new blood of the hobby? Probably not. One cannot kill the already dead.

Always ready to be educated. You have a better explanation???

Dick N&#65533;BK

Ummmm..... gee looks like the people working at Tripod are human
after all and make mistakes just like you and me. At least they were men
enough to apologize and make things right. Whar's your beef or do you just
like to whine and moan.

Panzer

I have acquired one if these submarine radios and am seeking a few pieces to get it up and running. Anyone have one of these beasts or a line on parts suppliers?Maybe a parts radio?

I do have a service manual for WRR-3A,B for anyone who may need a copy. Maybe you'd wanna trade for a few pieces?

I'll be at the MRCG meet in San Luis Obispo the first weekend in May. Hope to see you all there.

TCRPE

AWA Member Check-In Request

The Antique Wireless Association would like to determine how many of its members are now on-line and able to access its web site. If you are currently a member, we'd appreciate it if you would take just a moment and click on the link below to reach our site. Then click on "Members Please Check In!" on the main menu and fill in the name and address blanks as directed. It's as simple as that, and will help us determine how effective the internet might now be as a tool to communicate with the membership at large. Check-ins cannot be accepted at this e-mail address, and no reply is necessary.

Thanks,
the Antique Wireless Association

CERTIFIED MAIL–RETURN RECEIPT REQUESTED
Roger L. Wiseman
610 Glen Haven Avenue
Glendale, WV 26038-1302
Subject: Warning Notice: Amateur Radio License: KC8JBO

Dear Mr. Wiseman:
The Commission has monitoring evidence that you have been deliberately and maliciously interfering with the radio operations of other licensed Amateurs on the 14 MHz Amateur band. This interference has occurred at various times in the last several months and includes broadcasting music and other unidentified transmissions.
The Commission generally relies upon the Amateur Radio Service to be self-policing. Operation of the type described above is contrary to the basis and purpose of Amateur Radio and degrades the service for legitimate users. This serves as a Warning Notice that such operation will not be tolerated. Additional incidents of operation of the type described above will result in a monetary fine being levied against you and in revocation proceedings before an Administrative Law Judge.
You are requested to contact me at 717-338-2502 to discuss this matter.

Sincerely,

W. Riley Hollingsworth
Special Counsel, Amateur Radio Service
Enforcement Bureau

Hi All,
I picked up an external speaker the other day and I have no idea what I have here. It is in a wooden cabinet with deco style cutouts. the cabinet is 12 1/2" high, 11 1/4" across and 4 3/4" deep. There is a paper sticker on the bottom/top inside of the cabinet that reads: Utone
Utah Radio Products Co., Inc.
Huntington, Indiana.
There ia a 10" PM speaker inside with the following wording on the magnet frame: QUAM Speaker
Chicago 37,USA
Part #10a31
710
I can send photos to anyone that can help me identify what this speaker was used for....
Can anyone out there help???
Thanks in advance and rgds,
Mark S.

Sounds like it could have been an old radio speaker from the late
20's or early 30's. Since Utah usually labelled their own
speakers, it seems as though the original speaker has been
replaced with a Quam, an equally popular brand of a later era.

Date: 2001-03-21 01:07:25 UTC
From: grtpmpkin32@aol.com
Message-ID: <20010320200725.27650.00000058@ng-fj1.aol.com>
Source record: 55231

Hi folks-
Well, the Halli S38 is coming along nicely. I'm awaiting the arrival of the needed electrolytic condensers to replace the multi-section, along with a refill of some polishes and so on. It's starting to look almost new (it *was* in great cosmetic condition when I found it), and I'm enjoying going over the restoration plans while waiting for the caps. After cleaning up my tester, all tubes are running well into the 'green'. Whew!
I've noticed, though, that there's a loose-end wire, and I cannot find anything in the schematic to indicate why this should be.
It's coming from the 12SA7, I think pin 5 (don't quote me), and heads toward the 35Z5, but instead of attaching anywhere, it wraps around another wire in a little tight loop, and simply ends. Cleanly, no fraying. It is insulated and the wire it wraps around is insulated, so there is no electrical contact being made at the juncture. Awfully strange to me, I've never seen this type of thing before (I am fairly new to this)...And there does not appear to be any broken wiring tips on any of the nearby posts/sockets/etc...
I'm laughing at myself that I haven't seen this until now, but I really can't find any spot where this wire was supposed to have gone, other than wrapped around that other wire. In fact, the dust and grime that had settled on all the wiring is not present under the wire-loop area, indicating to me that this condition was in place for a long time.
Any thoughts?
Linus

It sounds like a gimick capacitor. They're made by twisting two insulated wires together. Just downloaded the schematic for the S-38, the capacitor in question is C25, it is the coupling capacitor from the BFO to the detector. If you don't have the schematic it is available from the BAMA FTP site.

Hi Linus,

Sounds like a "gimmick" capacitor- inexpensive way to achieve a few pF of coupling.
Don't mess w/ it.

Dale W4OP

I learned a LOT about radio working with my OT chief engineer who took the time to mentor me and work with me. I always felt that no question was stupid. A lot of other engineers I've worked with assume you know it all and get pissed when you ask them something. Again, it's all in attitude.

> Needed info that was
> regularly shared in the days of olde!

The same can be said of the internet. Five years ago, it would have taken five minutes to find how to open up this Motorola SP10... I've looked for 5 hours straight and all I've found that wasn't ads for 2-way shops was someone else who asked the same question in a forum somewhere, but never got a reply. SO, the 'net has turned into a big, frustrating advertising medium and the useful info is either gone, buried or "pay to access" now... what a joke!

> Let's stop bitchin' and start
> keeping up with the times.

I'd be a Ham but for the stupid code. My brain just can't seem to catch it. As for code tests, liken it to having to understand how black and white television works in order to get cable TV.

This is a true statement. IMO, the old "retro" circuits are the best. You
can usually tell what fried in them and fix them, let alone that they
sounded better.

An SX-42 followed me home, and the XYL said I could keep it. I'm still fiddling around with it, and am not completely familiar with all that it can do. (The crystal phasing on CW has me particularly confused).

If any of you folks already have one of these fine radios and know all the ins and outs of it, I'd love to hear from you. Even if you don't have any special tips, feel free to send me a note so we can both congratulate each other on owning such a fine radio.

Frank, AB7YT

Your statement sounds typical for a 38 year old. No
disrespect intended. I was 38 once myself.

Wait until your hearing and carotid artery has deteriorated
enough that you actually hear wrong words and sentences that
bear no resemblance to what was actually said. I can tell
you with certainty that this happens and it has nothing to
do with attitude.

Wait until every day you endure pain without end that
interferes with your sleep. Ever hear of sleep deprivation?
Until you've been there, you haven't a clue. Attitude has
nothing to do with this.

Wait until nearly all of your family and friends are
deceased, the culture is speaking a foreign language and
even the damned television doesn't make any sense. This WILL
affect your attitude.

Whatever happened to looking out for children and old
people? Whatever happened to having respect and
understanding for those that built your world and took care
of you when you were young and helpless? Do you take to
heart every word that a child says in anger? Of course not.
The same tempering should be used for some older
individuals. Give them the benefit of the doubt. It doesn't
cost a thing.

With any luck at all, most of us will reach the age when our
presence of mind and our body will not function properly. I
hope when that happens that you will find yourself among
compassionate people.

I'm not speaking directly to you, Johnny, but to all of the
readers of this newsgroup. If the shoe fits, wear it. If
not, just nod and move along without taking offense.

My dad always told me, "You get what you pay for." I guess since Tripod is free, you can't complain. I keep several pages on Tripod...never had a bit of trouble. I also keep every file on Tripod's site on my computer just in case there is ever a problem. Haven't had to use the backup plan yet and I've been with Tripod for about 3 years now. I guess it's a "sign" you should keep backup files of everything on your computer anyway. You HAVE been doing that haven't you? Ever "lost" anything on your computer at home?

From: JM <jdm@iland.net>
Message-ID: <3AB8A70B.6D7A235E@iland.net>
Source record: 55103

I have 2 receivers that I would like to trade (only) for a Hammarlund SP600 JX21 or JX17.
First receiver is a National NC188, collector quality, looks great and works good with original manual. Front panel is perfect, cabinet is 98%. I bought it from the estate of the original owner.

Second receiver is a Hammarlund HQ110, no clock but has the plastic clock lense. Looks great, a lot better than most I've seen. Front panel is near perfect. Maybe could use some electrical tweaking but I have been listening to CW and SSB with it. No manual.

If interested in a swap, let me know. Primarily I want a SP600 JX21 or 17, or newer, but let me know what other receivers you may be interested in swapping. Prefer one with ceramic caps (or recapped) not the black beauties, but that is really not an issue. Receiver must look and play good. Trades only at this time.

Email direct if interested, thanks for reading.

John in Missouri.

I have to agree, I have had many problems with ISP (used to cover all the net
stuff), and none ever owned up to being the cause of the problem. These folks

are to be praised for their honesty, not flamed. As I tell the students here, "you will make many mistakes, the only people that never make mistakes are those that never do anything".

AUUGH! Good one, OM! Wish I'd thought of it, hi!!

I agree 100% with Linus' suggestion. Start with warm water only. If you
can remove the dial, put it under slowly running warm tap water. If any
dirt refuses to come off, try a small amount of mild soap on the unprinted
area of the dial. If that helps, then try it gently at the end of one of
the band scales. I *think* the HQ-series dials are silkscreened and the
printing holds up better than other types such as decals. But don't take
my word for it... proceed cautiously. Good luck, and let us know how it
turns out.

Dwight,

Don't let those old grumps bother you at all. Actually, I have seen more griping on the newsgroups than on the air. It is just a part of human nature that *some* people cannot accept change. Even my dear old Dad lives for and like 1950. If the phone rings, it MUST be answered! Nevermind that we have an answering machine to screen calls--if the phone rings, he will almost break his neck to get to it. I keep the ringers off so he won't hurt himself charging thru the house like a mad bull. If he goes outside, he MUST wear a hat--one of those old 1940's homburgs. And so on. I'm not making fun of him, just using him for an example. Whether we notice it or not, we are just like him. Some of us wear our hair long and over our ears because that's the way we did it in 1970. And other generations wear their hair (men) in a pony tail-bald on top but a long tail at the back--because that's how it was when *they* were young. It is a part of our struggle to prevent our youth from slipping away--we want ourselves and our environment to be as it was in our youth.

Likewise, hams *sometimes* try to hang onto to their youth and the way *it* was when they were first licensed. Therefore, if it is different, if "them" dadburned whippersnappers don't do it the way *I* did it, then they AIN'T real hams.

Still, I don't think you will run into the opposition on-air as you do in this forum. Just ignore 'em!

Jerry

Hello.......NG.
Anyone need any "Boatanchors" Pinball machines, Jukeboxes
Organs, Pianos,Mixing consoles, Radios,Transmitters,Speakers,
Musicial instruments, etc.
Leaving NW...Pa. End of this week...on to ..NYC,
Then down South,across the southern route to Cal. then up to
Seattle ..
Then back east by-mid April.
Please let me know...
Leaving next Fri. Be out west the first two weeks in April.
Then back East by the end of the month.
Thanks......Mike

I have a small quantity of replacement tuning cards for the Navy ATC and the AAF ART-13 transmitters. They are similar but not identical. They come with a new plastic cover insert for the chart holder. $5 each. pp.

Please reply to this address: jeepp@erols.com

Also the milatary used the 829 (3E29) as pulse modulators on some RADAR
equipment.
Not sure about the 826 but I think it was used in a VHF radar.

Along about the time I got my 6th or 7th boatanchor rig, it occurred to me that I needed a tube tester. My rigs are all 1950s and 1960s vintage Collins, Johnson, Drake, Hallicrafters, Heath, Knight... the usual lot. Which tube tester do I want? I'd like to keep the price under $100 if possible. Thanks for any input.

I have severe tininnitus (ringing) which is around equivalent of 6-8kHz tone @SPL +8dB. Years of working around blaring studio monitors and loud enviornments have knocked out the high frequency response of my ears. Everything sounds like a muddy AM broadcast. And they wonder why I can't learn code? It blends right into the ringing. Five minutes trying to hear code and I've got such ear strain that I'll actually get a migraine. I also get frequent ear infections which have required me to have drain tubes in both ears for the last 15 years.

> I can tell
you with certainty that this happens and it has nothing to
> do with attitude.

I know... at 38, my doctor says I'm in about as good of condition as an 80 year old. I've been on sickleave on and off for a good majority of the last two years. I work in a car factory since all the consolidation in broadcasting made radio engineering a less than desirable position. Low seniority=worst jobs. We run 75 cars an hour and there's not enough time to spit between cars and it literally has ripped my body apart.

> Wait until every day you endure pain without end that
> interferes with your sleep. Ever hear of sleep deprivation?
> Until you've been there, you haven't a clue. Attitude has
> nothing to do with this.

I have an unknown problem in my back that keeps causing ribs to break free from the spine. MRI's and Nuke scans can't find what's wrong. The pain level is 7-9 ALL THE TIME. The cartilage around my ribs and spine are so messed up that it hasn't healed for over two years. The nerves around my spine are all inflamed.Sometimes I can't take it and have to go to the ER. The hospital attending will occasionally give me Vicodin (like they help or something) but my doctors will not. They're too scared that the FBI and DEA are going to bust their door down at 4AM for prescribing sched 2 pain meds. Change doctors? Been there, done that... they're ALL that way around here because of years of "drug seeking" GM patients. So, I'm no stranger to sleep deprivation. Even have a hard time sleeping with klonopin and ativan.

> Wait until nearly all of your family and friends are
> deceased, the culture is speaking a foreign language and
> even the damned television doesn't make any sense. This WILL
> affect your attitude.

The only survivng kin are my brother (he's having bad heart problems and I don't expect him to be around much more than a couple more years) and sisters (thet're both over 50) and one aunt. Most of my friends are either dead or lost. You can't hardly trust anyone enough nowdays to befriend them as most people today would rip off their own mother. Culture and society as a whole make me ill anymore. The world is a big "market" and we're merely "demographics". And I HATE TV...

I'm so fed up with pain and suffering (mine and others'), being ridiculed for not being "rich" and being expected to just pull large amounts of money out of thin air that I've been in treatment for depression for over two years now. Has it affected my attitude? YES! I keep trying new antidepressants every so often and none of them ever help because none of them can change the surrounding mess we call the world. I feel like half the person I was five years ago and they wonder why I often have suicidal thoughts!

> Whatever happened to looking out for children and old

> heart every word that a child says in anger? Of course not.
> The same tempering should be used for some older
> individuals. Give them the benefit of the doubt. It doesn't
> cost a thing.

The problem is society cares about ONE thing: MONEY! The prevailing attitude today is 'if it doesn't line my pocket, screw it". Anything else is "inconvenient" and "too time consuming". GREED. It makes my blood boil to be around greedy types for just five minutes. I come from an upbringing where we did the best with what we had and the WASTE and VANITY of people today just blows my mind.

> With any luck at all, most of us will reach the age when our
> presence of mind and our body will not function properly. I
> hope when that happens that you will find yourself among
> compassionate people.

I'm getting there fast. I know I won't be around "compassionate" people as they are just too few and far between.

> I'm not speaking directly to you, Johnny, but to all of the
> readers of this newsgroup. If the shoe fits, wear it. If
> not, just nod and move along without taking offense.

I just don't take offense much anymore as it doesn't do any good anyway. My point is, there are people my age who aren't in any better shape than someone much older, so age isn't the main factor here. I have to accept that the world, my friends, my body, etc., has changed. As much as I'd like to

have it otherwise, as much as I hate it, I can't stop it. It would be the ultimate in futility to try. Some people can't accept change and think that if they fight it hard enough, it'll go away and all will stay the way it is. I't called "sticking their head in the sand and blowing hot air out their rear".

As bad as code is anyway, I have physiological barriers to passing the code test. This has kept me from getting a license for years. HF is the only thing in amateur radio that I feel would justify having a license. But do I want to punish myself trying to learn code just to pass a 5wpm test for novice? Hell no! I'd NEVER use code, so I'd have a little piece of paper. I'd NEVER pass 10 - 13wpm with my hearing, so what's the point? I don't have any need for a Tech ticket as I already have GMRS from my engineering business. I paid for that license and the radios and I will continue to use it when I need it. I always heard how Ham radio catered to the handicapped, which it has. Except for my case. I'm not really considered to be "handicapped so I get "can't hear good enough to learn code? Too bad! Learn it visually. Well, my eye's aren't too far behind my ears where problems are concerned.

So, I guess I can just forget a Ham ticket until the ARRL decides to let the old CW requirement fall by the wayside.Then if I'm not a "good enough" ham because I got a license without a code test in the opinion of the "old timers", well too bad. Three options for you Old Timers: Accept it, quit Ham radio because it's pissed you off. or do as you are now and act like a 65 year old kid about it. If you choose the latter, fine! I just don't have to worry about you. It's like arguing" I have to pay $30k for a hardly decent new car today, while YOU OLD TIMERS only had to pay $3k in 1965 and it was built of metal not plastic... it's all *your* fault that it costs more today, so I'm not going to drive because of it".

2761. Trade: Icom AutoTuner for BA Transmitter

Newsgroup: rec.radio.amateur.boatanchors

Source record: 55120

Hello all,
I have a MINT IC-AT160 automatic antenna tuner with all cables that I would like to trade for a nice functional BA transmitter. I use this tuner with my IC-725, but will work with 726/728/729 - and I am told by Icom the 706 and others will work with different cables available from Icom or a dealer. It has automatic band switching and is lightning fast. The best tuner I have come across.

My interests in order : Hallicrafters HT-30, HT-37, Heathkit TX-1 -
NO SB Heaths please.

I may be interested in other transmitters. What you got?
Thanks for your response,
Dave k5fng@arrl.net

Old Hickoks are fairly plentiful, and very good. Often found for less than
$100, and don't go bad easily. You want a mutual conductance type tester,
I think all the Hickoks are. There are a cupla military types, TV-7, etc,
that are good, but usually more expensive, and are basically using the
Hickok ckt.
http://www2.gdi.net/~padgett/index.htm is a good place to compare the
Hickoks

2778. Re: RAF WWII Aircraft Radio sets R1155/T1154

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-03-22 10:29:10 UTC
From: vk2ua@yahoo.com
Message-ID: <3ab9d1cd.1943773@news.zip.com.au>
Source record: 55135

My previous posting on this topic generated a lot of interest both in web site visits and personal emails, which has encouraged me to add more info to the web site.

I have copied quite a number of pages of interest from Chapter 2 of the official ministry manual covering the R1155 receiver. I don't have Chapter 1 covering the T1154 transmitter, but maybe one of you can help?

- Detailed circuit diagram
- specifications and variations between models
- component index and layout diagrams
- installation diagram
- fault finding chart

The URL remains

http://www.zip.com.au/~sb/r1155/r1155.htm

If anyone is interested, I have a BC221 unused calibration book. If
you want to follow the procedure indicated by Bob/NA4G you will need a
book to enter the results into!

>we did the best with what we had and the WASTE and VANITY of people today
>just blows my mind.

Well spoken. I too grew up learning to do the best with whatever I had, and to be resourceful. It's a challenge, but can be rewarding in itself. I've recently gotten back into Amateur Radio after a lapse of 40 years. I left the hobby because the "have's" were always drowning me out with their "California Kilowatt" rigs, and my homebrew 50 watt transmitters couldn't compete. I was a little saddened to find that the same types still dominate certain portions of the bands, but there's still room for everyone. I get a little miffed at the guys who just go out and buy a big Yeasu or whatever, have someone install their antenna and get on the air. I am running ancient vacuum-tube gear, because I LOVE working on that stuff, it's a pleasant break from the high tech crap I work with all day. But again the "collectors" have driven the prices of old gear through the roof, not because they want to USE the stuff, they just put it on a shelf somewhere. There are exceptions, (like myself) but not as many. Whatever happened to PRIDE in one's work? Most people I run into today just collect their paycheck and don't really give a damn.

I sympathize with your physical problems and your frustration with the medical profession. As one who has had heart problems, and one whose wife is fighting cancer, I can doubly sympathize. The disease is bad enough, but the insurance companies make it ten times worse.

Sorry for the rant, you just sounded like the kind of person who sees through all the bull**** in our society today. Keep on keeping on.

I think what you've found is a capacitor. No kidding, this is the way a small-value (low-double-digit picofarad), trimmable (you can change it if it isn't right) capacitors used to be made, by winding a short length of insulated wire about another insulated wire. I was called a "gimmick" capacitor.

I'm not sure where this is in your circuit; isn't the 12SA7 the pentagrid converter? I have seen before in one mass-market tube-type SW receiver where a "gimmick" capacitor was used to get the IF stage to oscillate weakly when the switch was thrown to "CW". This was good enough for casual listening to CW, but not really adequate for listening to SSB.

Mine prints out its own book. But, I am sure someone could run off
a set manually or with a typewriter on an unused calibration book.
Those things are rather scarce items, so I am sure someone will want it.

Message-ID: <3ABA1870.D7F993EB@maich.gr>
Source record: 55149

Hi,
I wonder if some of you captains can take a bit of time to clarify a couple the differences, features for me wrt older HP gear; the 200 series oscillators, the 400 series ac voltmeters, the 330 distortion analyzers and the 33xx function generators.
I am trying to set up my hobby workshop again (after~15 years gap). What I used to do is design and repair audio circuits, reel to reel recorders, mic pre-amps etc. Mostly low level stuff...sometimes micro-volts, tube pre's....
Looking for very high impedance inputs on the voltmeter, and very clean output from the oscillator/generator. I have heard that the vtvm (which ones are these I have no idea) has very high impedance. How are the ss stuff....
Anyway I also saw on the web a HP 608 generator but I do not know whether is for audio or rf...
Any reliable dealers recommendation, as I hesitate to buy stuff that would need repairs as I am in Greece and life's stuff here from this respect.....
Anyway, would much appreciate it...
sincerely,
nicolas boretos
P.S. Any rec's for other precision manufacturers along these lines...

From: Keith Densmore <densmore@idirect.com>
Message-ID: <JMtu6.2$C6.377@quark.idirect.com>
Source record: 55156

Greetings,
Time limitations force me to list an interesting Heathkit SB-303 for sale.
It will come with the following

Original heath manual--good to very good condition.
Original power cord.
Heath AM filter installed
Heath CW filter installed.
Large extender board (and the small one if/when I can find it).
Accessory plug.

The radio itself is an overall 8-9. It has an excellent front panel, all
original. The case has some typical paint chips, no dents.
Potentially a 10 cosmetically with some TLC.
Electrically the radio works well with the exception of a bad 80 meter
antenna coil, which will need re-wound or replaced. Will be sold guaranteed
to have no other major problems.

You can view some images of it at
http://webhome.idirect.com/~densmore/sb-303s.jpg
http://webhome.idirect.com/~densmore/sb-303%20c.jpg
http://webhome.idirect.com/~densmore/sb-303r.jpg
http://webhome.idirect.com/~densmore/sb-303.jpg

Best offer over 225.00 by Sunday evening March 25 will get it. Shipping
will be 25.00 double boxed anywhere in North America.

73,
Keith, ve3gem

If its like the 830S, there is a user-modification to enable transmit on
the WARC bands. It consists of cutting some blocker diodes on one of
the internal circuit boards. The modification would have been described
in the owner's manual for the rig.

John

I know they continued publication through the mid-60's. I have one or two. I would look carefully into whether GE wants to claim copyright on any or all of them before you get too far into your project! They could pour a lot of cold water on the idea! However, everything else equal, I would be very interested in buying a CD with the complete collection on it. I would look at Radio Era Archives CD of QST as an example of how to do it!

Message-ID: <99e2us$pa9$1@slb5.atl.mindspring.net>
Source record: 55161

As supplied the 530s will receive only. See below to make it TX on WARC
also.

Break the line between the RF unit X44-1360-01 connector #6, Pin #1 (TOF
terminal) and AF unit X49-1150-00, connector #7, Pin #4 (TOF terminal).

Or if you want to do just the individual bands:

10 Mhz D4 (cut)
18 Mhz D5 (cut)
24.5 Mhz D6 (cut)

The RF unit is on the top right side (looking at from the top)
The AF unit is underneath the RF unit under the chasis.

Hope this helps.

Murray, I have seen one of the factory kits from Kenwood for this mod. It is intensive to say the least. A very complicated and time consuming mod.
I doubt you could replicate the parts list easily. I post to the list since others
may be thinking the same thing. Of course for the talented bench guy it can be done but it is not a small project in my book. 73 es GL Mike K0AZ

Folks,

Grumman was not located in New Hyde Park.. They were located further east in Bethpage, NY.
The LEM, Luner Excursion Module, which ferried the astronauts to the moon, was built in Bethpage. Alas, Grumman is gone also. Their site is now an industrial park with other
tenants, including cablevision.

2806. Hallicrafters SX-100 Collector Pair FS (Mark 1A, Mark 2A)

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-03-23 02:37:02 UTC
From: edandsusan@aol.com
Message-ID: <20010322213702.15490.00000384@ng-fa1.aol.com>
Source record: 55164

Nice pair of SX-100 radios from an estate.

The Mark 1A is serial x74297 (a piece of ther label is missing). It is in condition 8.5, near perfect original two tone paint, face plate, beautiful knobs! Works great, excellent audio. Chassis is a bit dusty, and I would recommend alignment, but it seems to work just fine.

The Mark 2A is nearly as clean, about condition 7, only due to a slight yellowing of the knobs, one has a chip, and there are 4 scratches (about 4" long) on the otherwise nice face plate, right at the Hallicrafters SX 100 markings. Turns on, lights up, but alas, no audio.

Both radios still exhibit the precision feel in the dial tuning mechanism that was the higher end Hallicrafters radios of the period. (My SX-99 didn't feel like that, though).

They have been together for a long time- I can't separate them (you can!).

$450, plus cost of shipping. I intend to double box the radios, that will cost around $20, plus actual postage cost, with insurance. E-mail for more info.

Ed Tilley, KE4WXY

The reflectors claim quite very convincingly that this place is an outfit engaged in criminal activities and that many thousandsof of dollars have been lost by well-meaning ham patrons. Can't vouch for the veracity, but I would suggest that anyone considering doing business with this outfit check the archived posts for the last week at the Collins and Heathkit lists on QTH.net.

Murray,

I installed the "kit" in a TS-180 many years ago. It is as the others describe. A bunch of small parts but not unreasonable. The main problem was I could never get any of the bands to work and Kenwood was no help at all. I wouldn't waste my time. When I finally sold the 180 that I bought new after about 18 years the main problem was a drift it had acquired.

2810. FS:GPS antennas for sale again!$55 plus Free USPS Priority mail shipping.

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-03-23 05:20:55 UTC
From: Robert Lonn <rlonn@home.com>
Message-ID: <3ABADD20.86498B9E@home.com>
Source record: 55168

NOTE! Please email me first to be sure I have antennas still available.
I can also provide a 10 ft. jumper with BNC connectors at each end for
$6.00 extra for a total of $61.00. Thanks!

a reference from one of my customers!!
(Thanks Robert, I received the antenna, it was as I expected and works
great with my Garmin GPS-III+. Don't hesitate to use me as a reference.
73 de AC7KE)

I have for sale, once again, a bunch of these real neat GPS antennas. I
had 12 units that sold out in a few weeks last year. Please check
out the 3 pictures for full information. Some have red gaskets, some
have white and some have black gaskets. This gasket seals the antenna
when you drill the hole for securing it. No difference but in case you
purchase one the color of the gasket might vary plus when they are
installed you don't see it anyway. They all have white tops. 2.75 inch
wide X .75 inch thick. Antenna requires 5 volts DC and receives its
power form the GPS unit like the Garmin GPS-1, GPSII+, GPS III plus etc.
units that provide power up
to the antenna. $55.00 includes FREE USPS Priority mail shipping in the
USA only. Payment via PayPal or USPS Money Order or Western Union money
orders.
Money orders and will ship in a few days, if you do send a personal
checks I will ship when it clears
the bank. All units have been tested and are working. Have about half a
dozen to dispose of. If interested, send me an email! Thanks for your
interest!

Source record: 55172

Greetings...

I took a pair of Eimac 3-500Z's in partial trade for a rig I had.
Previous owner reports full power output from tubes with very low hours. I
have no way to adequately check them. Visually, they look good, with no sign
of internal gassing. In fact, they look beautiful! If interested I can take a
couple of digital pics and send them to you. Looking for best offer for the
pair above $250, and shipping will be via USPS Priority Mail. They will be
packaged VERY carefully and insured and guaranteed against breakage.
Unfortunately, that is the only guarantee I can offer. Payment via PayPal.com,
as I have obligations I have to pay via Paypal for purchases I have made and
need the money there. Make me an adequate offer and I'll get 'em in tomorrow's
mail! They are currently of no use to me, and I could use the money elsewhere.
Will take offers thru Midnight 03/23/01 CST. Highest offer gets 'em pending
payment via PayPal.com! I have a nearly impeccable track record here on the
NewsGroups, as well as the Ham classified sites and eBay under screen names:
N9LXX, blainefox, and fox7498!

73, es gud luck~~~

If I recall correctly, there weren't that many pages in the GE Ham Journal.
The way law firms do this is to copy the document onto 8.5*11 sheets and
then feed it into a scanner with a document feeder to make a PDF file.

Hi Jeff
It's best to send it out and have it done properly. On the Ranger it's very easy to wipe off the lettering with anything other than soapy water. Windex will take the lettering off very quickly. There are people on here who have the silkscreens and the right paint for about $250 or so. Well worth it if the radio is working well. On the 390a it's much easier. Take the front panel off, apply paint remover, scrape off the old paint, sand it smooth, dig out the lettering, prime it well, wet sand the primer and paint it. Bake the panel in the oven at low heat and let it cool.
Dig out the lettering again and either paint it back carefully or use a white laquer paint stick. When finished I like to spray the whole thing with a flat clear. This makes it look very good. 73 Chris VE3NGW/W4 Florida

Hi,

Take it down to your local woodworking store. Not the lumber yard.
Show it to them and ask for their best knowledgable guess as to what
will remove the surface crap without harming the paint beneath.

Sometimes a product will do it perfectly.

Bob

I have three Yaesu FT50RD dual band hand held transmitters.

#One is a 7 - Buy it for $160.oo.

#Two is a 7 - Buy it for $160.oo

#Three is a 9 - Buy it for 170.oo

All three units, never been abused, have original box, wall chargers, and
green serial number certificate.

They won't last long at these prices.

Guaranteed to not be D.O.A.

EMAIL DIRECT FOR DETAILS AND OR BARGAINING.

2838. The Halli-S38 Saga continues...

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-03-24 02:26:01 UTC
From: grtpmpkin32@aol.com
Message-ID: <20010323212601.07808.00000498@ng-ma1.aol.com>
Source record: 55047

WELL.....
The needed replacement caps for the S38 arrived today, along with a refill of Novus polishes I'd been needing for a while (the order on caps was a great excuse to replenish the supply)...
So I finally did a thorough cleaning of the cabinet, some touch-up paint in a few bad spots (cheap black fabric paint works beautifully on that wrinkled finish if it's in small spots and stippled just so, to blend in), then a coat of clear Krylon 'satin' acrylic spray over the whole cabinet... REALLY brought everything to life and the cabinet looks almost new, without being artificially shiny or otherwise non-authentic.
I had carefully removed the plastic dial cover plate before the cabinet finishing, and while the cabinet was drying outside, I gave the dial cover a good twice-over with the Novus system polish... looks like a new dial cover!
I'm pretty proud of the cosmetic restoration on this one.
THEN, the electrolytics were replaced, and the whole thing was put back together.
Plugged in the isolation supply, and turned on the radio.
Warmed up, and now plays beautifully!!! It really has an interesting tone to the audio, and the tuning, while it takes a little getting used to, is pretty accurate, even into the higher HF region. On MW it's almost dead on.
Only problem now (always a fly in the ointment!) is that after about ten minutes of tuning and testing, the pilot lamp died!
Hahaha! The thing works great and sounds wonderful now, but that damn lamp is out. Oh well, back to the drawing board (or I should say, the lamp suppliers)... I did a check of voltages on the lines to the bulb and they read correctly, so I can only guess it was finally that bulb's time to go.
Anyone know the best place for a replacement lamp (AES's online catalogue is sorta useless for searching at the moment)..?.
Thanks to everyone for their help, and their support, and mostly their great sense of humor and kindness. I am really proud of this radio for a lot of reasons and I have your help to thank for it.
Linus

From: Mike <wb6vse@ipa.net>
Message-ID: <0tUu6.279$8Y6.411074@nntp3.onemain.com>
Source record: 55050
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

I am forced to get rid of the only existing 2KW SBE amplifier to make room for more goodies.
This amplifier was developed in our engineering department in the mid 70's. It is almost
identical to the Heath SB-220. They used a Heath assembly manual and Henry schematics to construct it.
The only difference I am aware of is the ALC circuits. They were designed to work with another un-marketed
model, the SB-35. The tuned input coils are slightly smaller than the 220. I prefer local pick
up, or close by with this unit, as it weighs close to 60 lbs. I can ship if necessary, and will double box for
safety . No tubes will be included. I can supply jpg if you want. Painted black and light gray. Front panel excellent.
Worked the last time I tried it several years ago . This is the only amplifier in existence. There were three built, and this is
the only one that had a cabinet. There is a serial number plate on the rear apron, with no number, which let's you know it
was never in production. Only a prototype. Collectors look!

Price will be $750.00. If no takers, will list it you know where!
Thanks
Mike/K5VSE

Hi All;
I got a bunch of Audio Amplifier boards with 4 transistors on them.
Has 3-2n3904 and 1-2n3906 with 8 ohm output, run off about 5-12vdc.
The size is about 3" x 4".
The sizes and placement of components may vary a bit from this picture.

http://members.nbci.com/wa2rqy/audioamp.jpg

Use it in your portable qrp rig, built it into something or use with your xtal radio.
Price is $10ppd.

Source record: 55054

If anyone cares... :-)
I found a replacement bulb in a junk box I hadn't rummaged through in a while. So I ran another check on the lines for the lamp, and their connecting points to the tube, and everything was hunky-dory so I replaced the bulb. It now works fine, lights quite nicely.
While I was doing THAT, the bandspread dial string broke! I'm not making this stuff up I swear, hilarious!
Anyway, that was an easy fix, and now everything is in really nice shape, running warm but not hot, all voltages check correctly, clean and stable.
I know I have some other aligning to do, and maybe some more cleaning in the Volume pot (another shot of Deoxit should do) but it's a really nice unit now.
Yippeee!
Linus

Drake TR-7 for sale. In excellent physical and electrical condition. Recently aliened and checked out by a Drake recommended service tech (actually he is a retired engineer). Includes two CW filters, the standard SSB filter and a noise blanker. Also, another filter position has been made available for AM at approximately 8khz without a filter (sounds great). Included is the correct plug and cable to connect to your 12 volt DC supply (at least 30 amps; this rig puts out substantial power). $350 firm plus shipping from San Diego. John, K6KOI

news:20010320200725.27650.00000058@ng-fj1.aol.com...
| Hi folks-
| Well, the Halli S38 is coming along nicely. I'm awaiting the arrival of
the
| needed electrolytic condensers to replace the multi-section, along with a
| refill of some polishes and so on. It's starting to look almost new (it
was
| in great cosmetic condition when I found it), and I'm enjoying going over
the
| restoration plans while waiting for the caps. After cleaning up my tester,
all
| tubes are running well into the 'green'. Whew!
| I've noticed, though, that there's a loose-end wire, and I cannot find
anything
| in the schematic to indicate why this should be.
| It's coming from the 12SA7, I think pin 5 (don't quote me), and heads
toward
| the 35Z5, but instead of attaching anywhere, it wraps around another wire
in a
| little tight loop, and simply ends. Cleanly, no fraying. It is insulated
and
| the wire it wraps around is insulated, so there is no electrical contact
being
| made at the juncture. Awfully strange to me, I've never seen this type of
thing
| before (I am fairly new to this)...And there does not appear to be any
broken
| wiring tips on any of the nearby posts/sockets/etc...
| I'm laughing at myself that I haven't seen this until now, but I really
can't
| find any spot where this wire was supposed to have gone, other than
wrapped
| around that other wire. In fact, the dust and grime that had settled on
all the
| wiring is not present under the wire-loop area, indicating to me that this

Bob,

Yes, it is supposed to generate RF on the WARC bands. Although I think it was built and sold after the WARC bands were authorized, I remember my TS130V had them blocked (It was sold before they became available). Get a book for the rig, even if you have to beg, buy, or steal one! There should be a jumper you can remove to fully implement the WARC bands.

Message-ID: <99jml4$4ro$1@plutonium.btinternet.com>
Source record: 55079

NEW PROGRAM TOPHAT1.exe

TOP CAPACITANCE LOADING OF SHORT VERTICAL ANTENNAS

Loaded by any number, zero upwards, of uniformly-spaced radial rods or wires, of specified length and diameter, circled by a ring of wire. With only one radial you have an iverted-L. By entering a large number of wires the hat will have the same capacitance as a disk of close-mesh chicken wire.

Enter antenna height and diameter, frequency. Guidance provided on estimating ground loss resistance. A coil is always needed either at the antenna base or incorporated in an L-match. Coil Q is asked for.

The performance of a short top-loaded antenna is generally several dB better than a coil-loaded antenna of the same height with the coil fitted 2/3rds of the way up the antenna. With a largish top hat the antenna current is sufficiently uniform vs height for there to be little or no advantage gained by inserting a coil in the antenna. It can then be incorporated in the L-match or an automatic ATU and the antenna can be operated multi-band. With coil loading multiband working is not possible except with screwdriver-type antennas.

The superiority of capacitance loading is due to the smaller inductance needed to maintain resonance. If the coil has the same overall dimensions, and hence approximately the same Q, the coil loss resistance will be reduced for no increase in loss in the hat.

Sweep the principal input parameters over wide ranges using adjacent up/down keys on the keyboard while observing corresponding changes in radiating efficiency. The improvement in dB is calculated due to the hat compared with no hat.

Download TOPHAT1, 44 kilobytes, in a few seconds from website below.

>
>Mike, N4PDY

Hickok was the Cadillac of tube testers. Nearly all the tube testers they made where mutual-conductance, which are to be most preferred as opposed to a basic emission-type tube tester.

My personal favorite is the 539 series, especially the 539C. Will test a very wide range of tubes and built like a tank. That model and the 600 and 800 series are probably your best bet.

One kind neat model Hickok made that I would avoid is the 123/123R CardMatic: instead of set up switches this model used a card reader to read the paramenter setting. When these work they are nice, but the card readers where a royal pain, and parts for them are damn near impossible to find.

Hickok is still in business (in Cleveland, OH) but they no longer stock parts, charts or anything else for their test equipment line.

BTW, let me add I worked for Hickok in the mid-70s while the 539C and the 123R where still in production. It was a very interesting company to work for.

Source record: 55085

Hello all,
I am offering my Johnson 500 RF Deck up for sale. I bought it as a project a couple years ago without the P.S./Modulator. It was tested on a working PS and seemed fine. After aquiring an old broadcast xmitter the project got shelved and I no longer need the unit. The front panel does have some scratches- I guess about a 7 out of 10 on condition. The case was stripped and powder coated by the previous owner but never painted the original Johnson maroon color. It is now a primer gray color.The chassis is in nice shape and appears original with no hacking or crazy modifications. I also have the original Johnson 500 manual.
I want $1000 CASH (FIRM-no hagglers please) for the unit. I realize most want to see before they buy so I will be bringing it to the Timonium hamfest for you to check out. I am not interested in shipping this beast as of yet so please do not inquire if you cannot pick up near Philly(my home QTH) or at the Timonium,MD hamfest next week.
Thanks!
Jim

P.S. For those not familiar with this unit it is just the RF Deck. There is no Power Supply/Modulator. THIS IS NOT A PLUG AND PLAY UNIT. You will need a P.S. and modulator to make it work. It is sold as is because it is a 45 year old boatanchor!

Source record: 55091

Hi Guys;
A few years back I bought this Heath HW-5400 Transceiver from a local SK's estate thinking that it would be neat to finish up. As time went on I realize that there is NO extra time anymore so i've decided to sell it here first before putting it up on Ebay.
Heres what we got;
The HW-5400 Matching supply/Speaker/Clock is completed with manuals, Excellent shape, almost mint.
The HW-5400 Transceiver is just about 95% complete, looks like the back panel/FR section needs to be installed, Covers are still in sealed plastic bags.
All wiring is TOP notch as the fellow was a trained tech.
I have all the assembly & operations manuals & rest of the few parts needed.
The Major assemblies are done & installed in the radio so theres not much left to do.
The Radio is like brand new and obviously was never turned on!
I thought it would be neat to be the first to fire it up but now someone else will have that honor.
The price for both supply & radio with everything I have is $450 + ups charges.
All will be shipped in double boxes & in two cartons.
Thanks es 73....Rich WA2RQY (1961)

Hi,

Looking for an older power transformer with the following specs:

Primary: 120V

Secondary:
275v-0-275v @ 90ma (B+)
6.3v (filament)
5.0v (filament)

The HV secondary winding is approximate and I can use something from
250v-0-250v to 350-0-350. One from an old 50's TV chassis would be great.
Let me know what you have, condition, and price.

Thanks,
Michael

Message-ID: <3ABE9E49.3EB1FA0F@netscape.net>
Source record: 55004

I was just given a National NC-183R, with a poor photocopy of the Sam's photofact. The unit appears to be complete, except for the bottom and back cover. I can't find a serial number or date, so I guess it was marked on the back of the case. This is a rack mount radio, and i was told it worked, about ten years ago when my friend had it given to him by another EE. A few caps have been replaced, but it has all the knobs and looks about 95% original. Looks like it'll be a fun one for me to rebuild.

Simon - get the manual offa ftp://bama.sbc.edu follow the instructions EXACTLY for the IF alignment. If not, you will find that the AVC is all screwed up AND, as an added bonus, the selectivity posititions will have different sensitivities.

Suspect the problem with the BASS switch is a crapped-out coupling cap somewhere in the audio chain. A likely suspect would be in the phase splitter. An impulse of voltage from flipping the switch which should be bypassed may be cutting off a tube..

Have fun with re-capping the RF deck. It's no fun at all. See www.antiqueradio.org for a complete discussion on this arduous task. As yuo probably found out, restringign the dial cords is no fun either. Hope that, as long as you had the old buzzard all torn apart, you lubed up the gears and the bearings in the tuning mechanism. I found that a teflon grease works very well (available here in the Colonies at Radio Shack - dunno if you can get it over the pond or not).

Good luck and 73 - John

From: Brian Denley <bdenley@mediaone.net>
Message-ID: <B4yv6.1210$107.1692605@typhoon.ne.mediaone.net>
Source record: 55010

Anyone know the socket type (4 pin) for the 5Z3 ? I am restoring an SX-28
and someone converted the rectifier to an 5U4 and changed the socket. I
would like to put the receiver back in it's original condition.

> They provide welcome relief from all
>the FOR SALE messages.

Hahaha, I can buy that!
Well I'm always glad to be a help, and if I can do that by asking questions that someone else hasn't asked, or was afraid to ask, or even by simply changing the jist of the more numerous FA/FS posts, than so be it. I owe a lot of the great contributors to this group a debt of gratitude for all THEIR help with my repair job, so if I've returned the favour in some small way to some of you, I'm happy with that!
It behooves all of us to keep our room 'clean', so to speak. Certainly it behooves me to do so, since I know I'm going to be relying on the info and kindness I find here, again and again.

2911. Cleaning pots

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-03-26 17:58:53 UTC
From: Ham <h@a.m>
Message-ID: <3ABF835D.40538847@a.m>
Source record: 55021

Most pots on inexpensively made gear, including most boat anchors, have an opening where the 3 lugs exit the pot. Thus you have access to the inside of the pot. After spraying and running the wiper back and forth several times, turn the gear so any liquid or residue or dirt can run out through those openings..

Mil spec pots, the Ohmite branded pots usually, are nearly sealed - and in my experience usually don't need cleaning. Sometimes if you are anxious to try to revive a noisy one, you can carefully bend the tabs that hold the back cover on enough to get a small bit of space between the body and the cover and you can introduce the cleaner there. Try to reseat the cover and bend the tabs back after you've fixed it. I've also known people who've used a Dremel tool or equivalent and drilled a small hole in the cover and after cleaning and drying covered it with tape to reseal it.

When I last bought Caig products (DeOxit and variants of it) it was cheapest on what is now the radioshack.com web site. And after making a purchase you'll get their large catalog via mail each year.

> correctly, so I can only guess it was finally that bulb's time to go.
> Anyone know the best place for a replacement lamp (AES's online
> catalogue is sorta useless for searching at the moment)..?.

If this is a bayonet-based lamp coming from the tapped filament on the rectifier, odds-on its a type #47. If that's what you want, any supplier (Newark, Allied, Digi-key) should be able to get it for you, although you may have to buy a box of ten.

These receivers were created at a time when the nominal value of the AC powerline was 110 volts. The nominal value is 120 volt today. That's 9% higher, which has to reduce filament life. If I had one of these receivers, I'd do my bulb(s) & tubes a favor by putting a power resistor into the series heater string to drop that "extra" ten volts. Maybe my set wouldn't then be "original" in one sense, but in another sense, I'd be restoring the "original" voltages to the filaments.

2915. The Great Johnson Ranger VFO Mystery

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-03-26 20:17:01 UTC
From: jtyburczy@aol.com
Message-ID: <20010326151701.19825.00001084@ng-cd1.aol.com>
Source record: 55025

The Rig: Johnson Ranger I.

Status: Recapped by previous owner. Solid State power supplies. 6550 modulator tubes.

Symptoms: Intermittent frequency instability when using VFO on 75 meters. Not exactly a drift, more like a jump, from 1 to 3 KHz at a time, back and forth. Sometimes coinciding with modulation, like FM'ing, but sometimes it happens with no modulation. VFO is stable for weeks, then one day it acts up. During this time, problem seems to grow worse with warmup.

Previous Surgeries: R3 (18K) in VFO compartment replaced with higher wattage component. Blob of solder between air variable cap plates found (!) and removed. OA2 VR tube replaced. All VFO mechanical connections visually inspected. VFO box screws secured with lockwashers.

History: This rig has ALWAYS had this particular VFO problem. When using an XTAL on 75M it is fine and rock stable.

Theories/Suspects: Silver Mica Caps in VFO? 6AU6 (untested)? Something in the grid block keyer circuit?

Discussion: Help! Does anyone have any ideas? I have been in that damned VFO compartment 3 times now and I dread going there again.

Source record: 55028

I recently heard someone talking about Ranger VFO problems where it would jump in frequency.
He finally isolated it to the actual tuning mechanism. The grease dried out in it and with heat the control
mechanism which has some ball bearings in it would actually move. Problem was cured by greasing
it.

Hi,

Have you been soldering for years and now are getting cold solder joints? Are you aware that flux has a limited lifetime? Did you buy that 1 Lb of solder at a flea marked for next to nothing and find that it doesn't solder well?

Flux has a limited life. This includes the rosin flux in the core of your solder. You can still utilize that solder with an external application of flux. Kester sells a "tin" of flux, SP 44. This is a paste and seems to be mildly active. I have also tried flux from several other manufactures and have found out that a very active rosin flux is needed when repairing old solder joints with old solder.

The most active flux that I have found is sold by Radio Shack. It is a paste flux in a squeeze tube. Works great and will help you to produce those beautiful shiny joints again.

Does anyone know who makes this flux for Radio Sack and how it can be purchased direct? I would like to buy this flux in another container. It is difficult to squeeze this stuff out without making a mess.

Regards,

Bob

I am using some solder that is almost 20 years old. Still works
fine and makes good looking joints. I do use 63 / 37 solder
rather than the normal 60 / 40 type. I find that it has always
made better looking joints and does less damage to the circuit
boards.

Hi All,
Just surfed into the Paris Tx. radio store and they have a PRISTINE NC183D for only $800.00!!!!!!!!! Thought I would choke!!!!! Last time I saw one of them go for that price, it was a completely restored and refinished cabinet and chassis on ePay.... God save us from the killers out there.......

If the 183D they have IS pristine as you said, please explain
why you would prefer one that had a "refinished cabinet and chassis?

Personally, if a rig has been "refinished", it's worthless to me.

"Preservation rather than Restoration"

Most paste flux is acid based and shouldn't be used for electronics.

I have been using flux core solder that is very old and it's just fine. I have some paste flux too but the only think I use that for is 'tinning' the iron tip and any kind of non-electronic work such as outdoor metal, etc. And when I do that, I use 50-50 tin-lead rather than 63-37 or 60-40. It's stronger although does require higher temperatures for a good joint. But I don't use a regular soldering iron - I use a propane torch with solder tip for such stuff.

Second the motion to do *everything* as long as you have your beloved SX-28 on the bench. It is a delightful set and well worth the extra mile, but it's never much fun to lug things back into the workshop later on. For instance, I didn't go to the trouble of replacing my band indicator strings, and now I wish that I had. Whenever I use that set, I'm reminded of that scene in the Wizard of Oz where the Scarecrow is struggling up the mountain hanging onto Cowardly Lion's tail and shouts, "I hope your tail holds out!" :-)

I must be a glutton for punishment. After finishing my first SX-28, I found a second, very very original one which is patiently waiting for his turn.

I'm working on an old homebrew power supply that uses a Stancor P-6333 Transformer, and it no longer has legible markings. There are 12 terminals that look like a bunch of filament voltages, but I'm not sure.

Could anybody come up with a schematic of this transmitter or at least give me some hints as to what voltages I should expect at what terminals?

Any help would be greatly appreciated.

They are collectors' items. Just like the difference between different
grades of coins or stamps, the unbuilt kits command a higher premium
than the already-built products.

Sounds correct to me too... another of my hobbies is model building/collecting (mostly of horror and sci-fi figures but that's of no consequence!) and the same tenet holds true there; if it's unbuilt, it's worth far more. Add the box, in good shape, and it's at a serious premium.

2937. FS.Eddystone VHF (Tube)Receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-03-27 09:19:18 UTC
From: "radio-exports.com" <info@radio-exports.com>
Message-ID: <tc0mlg3jd3ag12@corp.supernews.co.uk>
Source record: 54947

For Sale in the UK by radio-exports.com
Eddystone Model 770R VHF Communications Receiver.

This receiver is a first class example of a high grade Eddystone receiver from the tube era.

Ruggedly built,the receiver uses a total of 19 tubes in a single conversion design,covering a frequency range of 19Mc's to 165 Mc's in six ranges,viz:-
114-165 Mc's, 78-114 Mc's, 54 -78Mc's, 39 -54Mc's, 27-39Mc's, &
9 -27Mc's.
Provision is made for the reception of CW,AM,FM and NBFM signals.
The large weighted Tuning Knob gives is a joy to use, as is the beautifully engineered Turret Tuner for which Eddystone receivers are justly famous.
Use of the tuning vernier in conjunction with the logging scale gives no less than 2500 logging positions on each range.
Controls include,AF Gain,IF Gain,Noise Limiter,Standby Switch, & Adjustable Muting.
The receiver is fitted with a dual function panel meter indicating signal strenght with AM signals or correct tuning with FM.
The receiver is housed in its correct table top cabinet measuring 17" wide x 9"high x 15" deep.Weight 60 lbs.
Operation is from 100-125 or 195-250 volts ac.
This receiver is in very good,all original condition.It has been tested and is in good working order.
The price,which includes the cost of packing and air freight to the USA is $485 UD Dollars.

If you would like more information or wish to order,please contact Graham Leo info@radio-exports.com
Thank you for your time and interest.

I have an SP-600-JX with a problem related to double conversion. I cannot calibrate the unit on the top 3 bands; those that employ double conversion. I have changed out the 3.5 MHz crystal and tried spare osc modules in an attempt to get the end spread in spec. For example, 7.5 MHz will adjust (L) just fine. When I attempt to adjust the (C) 0n 14 MHz , the best I can do is about 500 KHz low. There is no balance point between the L and C. I note that the single conversion bands are just fine, thinking that the dial may have slipped, etc. Any thoughts? Thanks much. Please reply to: jeepp@erols.com

Hi Bob,
Please leave all of that stuff in the garage.... The tunnel is just about finished and I would hate to have done all that digging to come away empty handed.
After the great Garage Robbery, I will haul all of your worth-it's-weight-in-gold boatanchors over to Paris, TX. and see what I can get for it. I will email you from beautiful Tahiti and let you know how it all works out......
rgds,
Mark S.

Source record: 54957

For Sale.
A nice and excellent Hallicrafters SX-42. This unit is used. Used but not abused.
Inside you see the usual dust in the tubes, transformers etc.
Front is in exc cond with hardly any scratches or dents. All dials, knobs etc are present and accounted for. Comes with original manual and

instructions printed in 1946.
The original packing is still all there with the wooden braces, corrugated carboard bottom,
even the screws holding the wooden braces are there!
Nothing has been replaced, changed or modified inside.
Available for $500 delivered to Timonium hamfest this Saturday. No shipping.
Thank you.
Chong Ong

2954. Need info on repairing FTDX-401.

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-03-28 00:46:14 UTC
From: Matt Hone <honema@freeport.com>
Message-ID: <tc474oe0gpkeec@corp.supernews.com>
Source record: 54976

I'v got an old FTDX-401 that's been working great until a couple of months ago. I don't have any test equipment, so I'm just looking for somebody that might have had the same thing. I'f it's fairly simple to repair I'd like to do it, but if not, I'd just like to sell it to someone who has the equipment and know-how to fix it.

I heard a pop while transmitting on CW. There was a flash inside the radio, so I turned it off quickly. When I powered it back on, there was hardly any power on TX but it still rcvd just fine. I've since replaced the finals with a set of used ones, that helped quite a bit, but I was only geeting about 75 watts out. I got around 200 before this happened. So since the finals were used I thought this solved it. But it will only transmit for about 3-4 minutes and the power meter will suddenly drop to zero.

I hope this is enough for someone to help me diagnose the problem. I'm considering selling it, but it would really be fun to get it working again as it has some sentimental value to me as my first rig. Any help or suggestions will be greatly appreciated.

2960. Info on SX28 rebuild

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-03-28 02:43:07 UTC
From: Jim Hall <n4kwg@worldnet.att.net>
Message-ID: <33j2ct0s5lo33t2af807kl49ss2fpncl0t@4ax.com>
Source record: 54969

A few years ago I picked up a sad old SX28 at the Dayton
Hamfest. It was very rough but complete. I have since completely
disassembled the unit (even drilled out the rivets holding the tube
sockets in) and am preparing to rebuild the radio with all new
components. I plan on chrome plating the chassis (ala E.H. Scott) and
already have 15 new tube sockets to start with.
If any of you have suggestions for improvements to this unit
I'd like to hear them. Since it will never be an original radio I
pretty much have a free hand in the reconstruction. One area I
considered is a product detector and improved AGC.
What would you add, delete or change? Do you know of any good
articles on mod's to the radio?
At the very least it'll be interesting to hear what a "new"
SX28 sounds like.

Thanks in advance.
Jim

2961. Re: The Great Johnson Ranger VFO Mystery

JTyburczy (jtyburczy@aol.com) wrote:
: The Rig: Johnson Ranger I.

: Status: Recapped by previous owner. Solid State power supplies. 6550
: modulator tubes.

: Symptoms: Intermittent frequency instability when using VFO on 75 meters. Not
: exactly a drift, more like a jump, from 1 to 3 KHz at a time, back and forth.
: Sometimes coinciding with modulation, like FM'ing, but sometimes it happens
: with no modulation. VFO is stable for weeks, then one day it acts up. During
: this time, problem seems to grow worse with warmup.

: Previous Surgeries: R3 (18K) in VFO compartment replaced with higher wattage
: component. Blob of solder between air variable cap plates found (!) and
: removed. OA2 VR tube replaced. All VFO mechanical connections visually
: inspected. VFO box screws secured with lockwashers.

: History: This rig has ALWAYS had this particular VFO problem. When using an
: XTAL on 75M it is fine and rock stable.

: Theories/Suspects: Silver Mica Caps in VFO? 6AU6 (untested)? Something in the
: grid block keyer circuit?

: Discussion: Help! Does anyone have any ideas? I have been in that damned VFO
: compartment 3 times now and I dread going there again.

Could be the silver micas. I've seen an occaisional defective one where
the capacitance would jump around a few pF. Siver micas are made of a
stack of plates and mica sheets. Sometimes the plates aren't soldered very
well, and a few become intermittant, causing the capacitance jump. A rare
problem with off-brand capacitors, but it does happen.

Nope.

>Are you aware that flux has a limited lifetime?

Never heard of such a thing.

> Did you buy
>that 1 Lb of solder at a flea marked for next to nothing and find that
>it doesn't solder well?

Nope. I've used solder that was brand new and solder that was old when I bought it 20+ years ago, and never a problem if it was good solder to begin with and if I used good tools and procedures.
>
>Flux has a limited life. This includes the rosin flux in the core of

I've been soldering for 35 years and never had a problem with old flux.

>You can still utilize that solder with an external
>application of flux. Kester sells a "tin" of flux, SP 44. This is a
>paste and seems to be mildly active. I have also tried flux from
>several other manufactures and have found out that a very active rosin
>flux is needed when repairing old solder joints with old solder.

If it's really rosin flux, that's OK. But most of the flux I see has some acid in it, making it useless for electronic/radio work. I still recall the frequent warnings of Heathkits and the Handbook to NEVER use paste fluxes of any type. They knew what they were talking about.

Wow!

Check out the Collins prices; take the average nutty inflated Collins collector price and DOUBLE it.

There's a supermarket near me that operates under the same principle. I once asked them how they justified marking up all their items 200% to 400% and they said that that people pay a premium to shop in a store with superior "service". All the help in the store do say hello to you and smile a lot, but I don't know if it is worth paying $7.95 a quart for orange juice.

What got me interested in radio was my Science teacher and Math teacher. One taught the theory and the other taught the code. We started a class after school. Not everyone was interested. People are being flooded with tons of high tech gadgets like never before. If I want to work New Zealand I can get onthe internet with a voice program and chat and still exchange qsl cards. (I dont). Hard to beat that. I hear there will soon be direct internet link from home to satellite someday soon.
Do people want to build anymore???? Hard to beat the selection of stuff available. Just a day away from the mailbox. I was interested in electronics so it didnt take much to get me hooked. I used to build my own weather satellite receiving equipment from surplus stuff back in the 60's but heck now it is on the internet. Now I read about the old days and keep a tube rig in the shack so that if it breaks i can fix it. I can see the tubes, resistors, caps, etc. Not surface mount stuff. I cant afford to throw it away if it breaks.
Other hobbies have gone the same way to a degree. I fly radio control planes and it has changed over the years. Got a lot better. I dont have tobuild as much due to ARFs. Radios are better. Thank God I dont have to fight with a gas filled superregen receiver tube. We couldnt fly 5 at a time then like we do now.
My 2 cents.

2972. trade FRG-7700 for R$x/Hq170/180

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-03-28 19:44:05 UTC
From: Jim - qrp/cw <kw3u@warwick.net>
Message-ID: <3AC23F04.9510813B@warwick.net>
Source record: 54982

Hi;
I am currently running two old novice xmtrs with xtals on
80/40 mostly and would be interested in a trade of some sort
for my FRG-7700 yaesu rcvr.
the 7700 is a GC rcvr 150kc - 29.9mc with am,ssb,cw,fm and
3 bandwidths for am. digital and analog display,dig clock,timer,nb,s
meter
rf attn, owners manual. It works 100%, front plastic panel has wear on
lettering by headphone jack, and by audio gain.
Looking to trade or buy a BA rcvr like drake R4C or Hq-170/180
in great working condx, not a collector item so cosmetics not real
important (up to a point-no bullet holes or heavy smoker enviroment).
My location is where I-84 crosses Pa. and NY and NJ.
tnx Jim KW3U

2973. s- meter problem hw-101

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-03-28 19:45:31 UTC
From: jim breeyear <jbreeyea@zoo.uvm.edu>
Message-ID: <3AC23F5B.49705DF7@zoo.uvm.edu>
Source record: 54984

Hi,
I have a HW-101 that has a almost no response to signals . It works fine during transmit and can be zeroed during receive but it takes a 90 over signal to make it go to S-9. The calibrator on 80 meters makes it go to a S-4 at best. I replaced the 6au6 , cleaned the PC board, checked the tuning. I measured most of the resistors , sprayed them with freeze mist , hit them with a heat gun but that didnt seem to make much difference. Not sure about the stability of the zero pot. Is this typical of some of these rigs. I read the engineering changes and couldnt get much help from that.
Any ideas?

Message-ID: <3ac25b56_3@news3.prserv.net>
Source record: 54987

Frank:
From the 1958-9 Stancor catalog S-104, P19:

Two 5V@3A windings, not tapped, one 6.3V@4A, center tapped, and a 7.5/6.3@3A
also center tapped. If the wires are loose, those ought to be easy to dope
out, two pairs, one triplet, and one set of five. As I recall, the 7.5/6.3
is an either/or for the 3A, or in combination for a total of slightly less.
Primary is 117 volts, 50/60 Hz,and all windings are insulated for 2500 volts
RMS. Hope this helps.

ahhhh....shotguns are for marriages only! or ham hating XYLs HIHIHI Take that you old Collins BANG!!! Almost pay to see that!

Dan is right. It IS an open cap. This happens all the time with ol BA rigs. Here is a trick I use and it works most of the time. Turn on you 101 with the CAL ON for that mighty S-4 signal on 80.

Now take two insulated wires and tightly twist them together so the metal is not touching. Don't need much... about an inch of twist will do.

You now have a "gimmic" capacitor.

Take the ends and put them across leads of the disc caps you wish to test in the IF/S Meter circuits. You'll soon come across the one that makes the S-meter jump. That's the one that's bad. Be careful you don't kill (shock) yourself doing this!

You can then tack on (solder) a temp cap near the same value underneath the board and see if that fixes it.

If it does then just replace the bad with the good topside of the board.

But.... you might also want to check your tubes. Sometimes the tube elements short out or the tubes get gassy or have weak emission and that produces the same low S-meter symptoms. Corrosion on tube sockets can do it too. Pull and insert your tubes several times to make sure the pins are getting good contact.

Eventually you might want to get yourself a Collins rig. Since they are much easier to fix.

Simply open up the cabinet and insert several $100 bills.....

ahhhh heeemmmm.... jusssss kidding! CCA'ers ;^)

>That's what's great about free enterprise.....if you don't want to buy it,
>then
>don't.

I'm sincerely happy that you bought your receiver from them, and felt it was worth whatever you paid for it. That is indeed a basic benefit of free enterprise.
My only 'gripe' about dealers who artificially inflate prices, either by accident/enthusiasm or sheer moxy design, is that unchecked, it tends to encroach upon the market as a whole, in ways that sneak up on most collectors and even other dealers. The tendency to over-price what some consider collectible is rampant in the antique village/flea market realm, where one intelligent dealer sells a good piece of whatever collectible for a high but fair price, and before you can blink at least a dozen other dealers who have similar but worse condition goods automatically assume *their* goods must be worth the same as the first dealer's price. These other dealers feel that they are losing money if they don't sell for the highest going rate, regardless of what's appropriate to condition or even common-sense practical.
Within months, radios, clocks, phones, toys or even dishware become ten times higher-priced than they should be anywhere, let alone in the given region. Then, when you try to haggle or educate the dealer on the 'going rate' they immediately go on the defensive with cries of "Show me anywhere else in a hundred mile area that sells radios for less than I do..."... and you can't argue, even though they're dead wrong about the base price because they came to their pricing decisions via faulty/ignorant thinking.
A favorite example of mine is the fairest antique monger in my area selling a very clean, restored and working Philco cathedral for $200. Another dealer in an adjoining store bought it and a month later put a $450 price tag on it. Already it's ridiculous.
Then, the dozen or so associates of this second dealer started pricing their own radios, ANY kind, working or not, damaged cabinets be damned, for the exact Bunis book highest prices... within another few months I could not find a working radio at a common sense price anywhere in a hundred mile radius (literally, I drive to most of these places three or more times during a year)... and the common customer buys it thinking it's either common to pay that much, or not too common but still a sign of status and therefore the dealer is allowed to pratice this self-deception. The example I gave was three years ago and only now are prices starting to come down to less-than-absurd levels.
Free enterprise, yes, but the logic of "don't want to pay it, don't buy it" only holds water for so long before it collapses under its own weight.
On the good side, a built-in failsafe of this problem (or perhaps I should say idiosyncracy) is the fact that the most extreme cuplrits usually don't get the right kind of attention (as witnessed by the tongue-in-cheek 'ridicule' of this

one store), and therefore do not have as much influence on market prices over a reasonable period of time.
And while you should be happy about your particular purchase, there is still no reason on Earth that an SX-88, no matter if it is "EXCELLANT", should *be expected* to sell for $8,000. There's nothing terribly wrong with someone who has the dough spending that much on an 88; the problem is with the dealer who thinks it's a common or reasonable price anywhere else.
Just my thoughts, hope you take them in the spirit in which they are intended.
Linus

Speaking of silver micas: I'd always worked with the newer ones, the components that are kind of dark brown. But I recently bought several assortments from Dan's small parts -- they are the older rectangular style with the color dot codes on them. Are there any differences in quality or reliability between the two styles?

BTW: I really love the way Dan sends out his small shipments: wrapped in newspaper and brown paperbags with rubber bands around them. It almost seems like you are getting something illicit! FB!

Jim: I learned from some of the Heath gurus that a lot of the resistors in the HW-101 were under value (wattage). They should have been a bit heftier As a result, the normal problem of older resisitor increasing in value as they get hot is partiicularly bad in the HW-101. Some guys do a complete replacement of the resistors. Seems kind of extreme to me, but I have had to replace some of the resistors in mine. The resistors in my S-meter circuit were changing in value quite a bit as the rig warmed up. S-meter was all over the place. I swapped them out for some higher wattage components and it settled down. I also had serious problems (still unrresolved) with the VOX circuit I suspect that the same kind of resistor problem is at work here.

Good Luck 73 from the Azores Bill CU2JL N2CQR

Hi all
I have a 930 service manual that is missing the large foldout insert schematics for the signal board. I need both , for the two different serial number models. If anyone has a service manual , I would appreciate someone mailing me the two signal board schematics so I could copy them or copying them for me ... I will pay all shipping cost......

Thanks John KI4NR

Subject: ** FLEA at MIT ** The THIRD SUNDAY of Each Month APRIL thru OCTOBER in Cambridge MA

Spring has sprung...
and it is less than a month till the seasons first FLEA at MIT..

*** GREAT NEWS We again have full use of the garage for sellers !!!

Summary: Buy Sell SWAP Ham Radio Electronics Computers 9AM - 2PM

*** !!!! In our Traditional GARAGE and lot !!!! ****
so come rain or shine or super heat the Flea is on !!!

********* $1 buyers discount with hardcopy of this notice ********

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
Sunday April 15th 2001
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >2000 cars!

Buyers admission is $5 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $20.00 or the first and
$15 for each additional at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

SEASON PASS + Advance Seller Discount

A sellers discount season pass is available which
offers a 33% discount. See the registration form
below for full seller info.

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Separate lines will form prior to gate opening
for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

Talk-in: 145.23- (PL 88.5) W1BOS/R and
W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)
MIT Radio Society (W1MX)
Harvard Wireless Club (W1AF)

>Just my thoughts, hope you take them in the spirit in which they are intended.
>Linus

I guess it's just a matter of how much it costs for this fellah to stay in business. He has to pay monthly rent on his store lease. Pay utilities. Pay for any employees he has. Pay for locating, buying and transporting radios to his facility. Pay to check them out. And then pay for boxing up and shipping the radios. Plus, pay for a web site. Then, on top of all that, he has to add his profit. That's an awful lot of costs to add to whatever the radio, itself, it "worth." I don't know if it justifies charging $8000 for an SX-88, but buying from an antique radio dealer who's making a living at this sort of thing is certainly going to be more expensive than buying from an average joe who has another fulltime job, and is just trying to unload some old boatanchor that's been sitting in his garage for 40 years.

Cheers...

Bob

Certainly true, Bob. I hope I didn't offend any antique dealers in my post, and
you're right, the difference in overhead can be enormous, and will certainly
affect product pricing. It's just a question of the extreme to which they
travel to do it.
I guess the main target of my post was the dealer who *for no other reason than
keeping up with the Jones'*, jacks up his prices beyond any common sense.
I hope no one felt I was accusing any particular dealers of being criminals or
otherwise bad people.
Linus

2999. question Drake T4XC-R4C

Hello to all.
I am the recent and happy owner of a Drake 4c line (T4XC-R4C).
I noted a 10 dB difference of gain in reception when i drive the
transceiver by the
TX (more gain when the R4C drive the transeciver.) I imagine there is a
little difference of gain
on inj and/or car-osc between tx and rx.
is it normal on this material or my T4XC needs some adjustement ?
Tnx for help

You may not be using the right kind of cable to connect the INJ line
between the rigs. Excessive length or incorrect impedance can have
the effect you describe.

It's his radio, he can do what he wants with it. The SX-28 is hardly a rare radio (if you want one, just go to ebay, there are almost always at least two up for auction during any given week), and he said his was in poor condition to begin with, so if he wants to customize it a bit in the rebuild, that's entirely his business.

To the original question, I haven't played around with the -28, but have with the earlier "Super Skyrider" radios (SX-17, SX-16, SX-12, and SX-9), they were all pretty deaf above about 10 MHz. If the -28 shares this affliction you might want to get advice on modifying the circuit to improve that. Good luck.

Dave

It doesn't matter what they ask. They can't sell an SX-88 for $8000 unless someone is willing to pay it. It all depends on your definition of "worth". If you define "what something is worth" as what a willing buyer who doesn't have to buy pays a willing seller who does who doesn't have to sell, then "what something is worth" become fairly obvious.

73,

Then walk away and let him/her sitting with the radio. Or pull out a wad of
cash for what
you think a reasonable amount is, and stick it under their nose. Amazing
what hard currency
will do at 4 PM right before closing.

I think a lot of people get confused with "want" versus "need". I don't
think any of us "need"
radios, and all of us "want" them. No one puts a gun to your head and makes
you buy something
at inflated prices. The choice is up to you. Any yes, I've paid some high
prices for some things in
the past, but I "wanted" them, and had the money. It was my, and only my,
decision.

Money is flowing right now, albeit not as much as a year ago. I've noticed
ebb and flow in
ebay prices. Have patience. Free Enterprise works just fine. As Barnum
said......

The SHORT answer, is YES - it IS "normal" for a slightly lower
drive/receive level in the Drake twins when the transmitter is used as
the frequency source. It MAY be minimized by careful alignment, but
virtually EVERY set of Drake twins *I* have owned have done the same as
yours in varying degrees, and a COUPLE I've owned were bought brand new,
and used factory cabling...

I had a problem with my SB102 (basicly same circuit as the HW101). The
meter zero pot had gone bad.
I replaced it with a 50 cent unit from rat shack. The meter zero pot in
these rigs never lasted very long. The
carier null pot is of the same kind, but probably not subject to as much
current.

Source record: 54921

Now that is right on the head !

Change all the 100K plate resistors and match the 2 IF tubes.
The meter Zero pot even walks in them things.
Check AVC tube for gas R-109, 106, 107, 104, 105, for walking
Even a gassy or problem around V2 (RF receive amp) will screw up the AVC
voltage that will affect the IF amp.
Note:
Meter zeroing different for each band :
Aged heterodyne oscillator crystals
adjust the heterodyne oscillator coils for a more equal output at test point
by V19
Usually *not* as exactly in the manual get it to zero correctly at each band

1. The radio is not rare by any measure.
2. In it's original condition it may have been good for some parts but
by no means restorable to original condition.
3.When I'm done with it (if ever) you won't be able to afford it.

Well I forgot to add... it is a Heath "KIT".

Which means someone - not you or the factory - could have put it together.

It might pay to bring up a nice big cup of coffee and check that everything was put in place correctly. If that checks out...

It might just be a cold solder joint.

Yes... Yes... nothing is ever THAT simple.... but sometimes we luck out and it is......

Good Luck!

You're right Mark... like I said (and maybe it got lost in my other ramblings!)... there's nothing wrong with someone paying a million dollars for anything they want if they feel it's worth it. I've paid more than others thought reasonable for things, not just radios either, and have been perfectly satisfied with the transaction. I've also walked away from items which were simply absurd in price, and let the guy know about it, too. Common sense, to be sure.
My concern is over any seller who *expects* his stuff to be worth the highest price anyone *ever* paid for it, and that gullibility and ignorance trickling down to other sellers of similar items.
Yes, I can take it or leave it as my choice, but that doesn't stop regional markets from becoming needlessly inflated, and the hobbyist gets the shaft down the line.
Not a huge problem, not a big priority in my life, but a legitimate concern.
Linus

Hi Rick,

That would be a 6CA4. The European number is EZ81. 9-pin miniature, full-wave rectifier with heated cathode, 6.3v heater, good for about 125 ma, IIRC. Pretty common tube, easy to find but out of production.

Hello,

I have recently bought a Maruader. A manual came with it, but it is missing
a few key pages.

I need pages 82, 83, 118, 119, 122, and 123.

Perhaps some kind soul can reproduce these pages for me. I would be happy
to reimburse for expenses. An e-mail attachment, mail, or my calling your
fax maching on my dime will be fine.

Thanks for your conderation of my need.

Sincerely,

Jim

3024. HW 101 Question

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-03-30 17:19:54 UTC
From: Chris Wagoner <cwagoner@us.hsanet.net>
Message-ID: <3AC4C03A.83403EFC@us.hsanet.net>
Source record: 54934

I have an HW 101 that, after being out of service for a number of years and stored in an unheated garage, worked fine on both recieve and transmitt for approximately 10 - 15 hours (total on time) and then the 1000 ohm resister (located on far right hand side of the board looking a the radio from the front) on the board labeled 85-129-6 burned up, as well as the two 330 ohm resistors (both located near the El-Rad inductor shield can) on the same board. I checked all of the tubes (2- 6EA8s and 2 - 12AT7s) on this board as well as the 6AU6A on the VFO - all of these tubes check out OK. The 1000 ohm resister burns up as soon as the radio approximately 30 - 40 seconds after the radio turns on. Any suggestions on trouble shooting this problem.

I am also looking for a schematic/manual for my HW 101 - any suggestions. I have checked the Alabama site with no success.

Thanks,
Chris Wagoner - KA4FDM/3

Hi all,
tnx for help and reply. On my 4c line, the difference is not vy important
but i noticed it HI.
I am vy happy of this set up, really a great technical advance when there
were built.
The receiver is serial number 28735 and transmitter 21178. The RX is equiped
with 1500 and 500 Hz CW filter, i own also the MS4.
When i was a young ham (got licence in 1973 at 16 years old), the 4c line
was a dream but a vy expensive dream! The cost was twice a "classic"
japonese transceiver.
73 to all, tnx again for your help

Hi Guys;
Getting down to the last few parts from my 32V-2 xmtr.
Have:
power transformer
Choke
3 filter caps(1-rectangal HV Can, 2 round cans)
Some switches.
All can be used to HB a tramitter aslo.
Please make offers, i'll add shipping.
Thanks es 73....Rich WA2RQY (1961)

Have 3 BIRD dual element line sections. These accept TWO slugs at the same time for forward and reverse monitoring at the same time.Like NEW condition.
WITH your choice of "N" or "UHF" QC connectors
WITH meter connecting cables (Line section connector on one end, BNC on the other to hook up to your 30ua meter movements) (meters ARE available NEW for $50 each, genuine BIRD meter movements are $79 each)
WITH mounting brackets
LESS elements (sold separately)
Line sections are $175 each W/QC conn., connectors/cables, brackets. (new price is $233 + connectors + brackets + cables)

Source record: 54806

Hello and thanks for reading. I recently retired and we've moved to a smaller place. My trusty old S-Line is taking up a little too much room in the new shack and I'd like to replace them with a KWM-2A transceiver. The station is comprised of a 32S-3, 75S-3B, 312B-4, and the 516F-2 (all winged). They were purchased as a set and I am the second owner. All units are in near mint condition and come with the original manuals. I'd like a round emblem rig to go with my round emblem 30L-1. If you'd like to trade or sell I'd sure like to hear from you.

Thanks and 73,

Pat (W7YCN)

>I certainly understand and appreciate your comments, however, the market will
>eventially determine the selling prices. '73'
>

I'm quite aware of that, but occasionally one has to wonder how one store lists an SX88 for $8,000 if the market (which is on the whole substantially lower than that) is supposed to be dictating prices. 'Eventually' is not a goal, since the market itself is always in a state of flux (the nature of such a thing).
I think it's even more subjective than market determination, with even more variables.
Oh well, I'm just a young new guy, what the hell do I know, right?

Source record: 54808

NOTE! Please email me first to be sure I have antennas still available.
I can also provide a 10 ft. jumper with BNC connectors at each end for
$6.00 extra for a total of $61.00. Thanks!

a reference from one of my customers!!
(Thanks Robert, I received the antenna, it was as I expected and works
great with my Garmin GPS-III+. Don't hesitate to use me as a reference.
73 de AC7KE)

I have for sale, once again, a bunch of these real neat GPS antennas. I
had 12 units that sold out in a few weeks last year. Please check
out the 3 pictures for full information. Some have red gaskets, some
have white and some have black gaskets. This gasket seals the antenna
when you drill the hole for securing it. No difference but in case you
purchase one the color of the gasket might vary plus when they are
installed you don't see it anyway. They all have white tops. 2.75 inch
wide X .75 inch thick. Antenna requires 5 volts DC and receives its
power form the GPS unit like the Garmin GPS-1, GPSII+, GPS III plus etc.
units that provide power up
to the antenna. $55.00 includes FREE USPS Priority mail shipping in the
USA only. Payment via PayPal or USPS Money Order or Western Union money
orders.
Money orders and will ship in a few days, if you do send a personal
checks I will ship when it clears
the bank. All units have been tested and are working. Have about half a
dozen to dispose of. If interested, send me an email! Thanks for your
interest!

The asking price doesn't dictate the market. The price where it actually sells is the market price. There's nothing wrong with asking anything you want and there's nothing wrong with offering less. How much do you want for your SX-88 Linus?

<< 'Eventually' is not a goal,
since the market itself is always in a state of flux>>

Welcome to the real world Linus. Sometimes the market price is unknown and it takes a little while for it to reach a point of equilibrium even in a stable market. Have you seen the advertisement in QST for an SX-88 wanted by W6OU that's been running for years? I've read that there are only around 60 of these radios that survive today. That makes it a "seller's market".

ALan,

The current flowing through the resistor determines the wattage is should have. You can calculate this by using the formula P=I^2/R with appropriate modifications to represent peak power, average power (what you want) or RMS power. These are all factors that multiply the Power rating. I would look at the resistor in question and see how large it is physically. Small resistances are probably 1/2 watt ot 1 watt. Larger sizes can be anything.

One doesn't talk about "wattage" but power rating and the formula is Power equals current squared MULTIPLIED by resistance.

I can't find the original posting on my server so don't know what the original posting was. However in general if you MEASURE I and R or E and calculate power you get the power rating required and double it as a safety factor. It would be unusual to have to deal with peak power or some other variation of power when talking about component value in a circuit.

Gotta sell it so heres your chance to steal one..too warm in my little tiny shack, for summer!! This is a NoTune Standard AMP Supply set up...two pieces, one transformer (large) sits on the floor), RF deck a normal size and in very good condition... Has three Eimacs in it that appear to be full out...it is set as from the factory to do 1200 watts all day with 100 in....it will go considerable higher than that if you wish...either by using more input power (up to 150 watts) or you could reduce the input Pad. So....bottom line....Ive had no interst in it at normal 1500 + or - pricing...now its $1250...you pay shipping....no use offering less, I have that offered if I will drive 300 miles...rather not...cash OR will trade for a good FT 1000MP, maybe other rigs too...but it will be wholesale for wholesale if we trade...THis amp is quiet , works well, has qsk, nothing wrong with it...so easy to use...thanks 73 Murray K5MDM

Over the past few months eBay has gone out of their way to come up with new ways to insult their users. Higher fees, silly restrictive policies, poor or non-existent follow-up on non-pays or bad sellers and increasing fees continually has made a once-enjoyable past-time aggravating. This morning they announced their new PRIVACY POLICY. I suggest all users of eBay READ THIS CAREFULLY. I, for one, am getting sick to death of every entity around feeling they own the entitlement to know, use and share my private information. Gentlemen, eBay has taken looking up our skirts to the next level. If this stuff doesn't bother you, then "have at it."
I urge all eBay users to say "enough's enough" and let eBay spiral-dive into a burning heap like they are headed for anyway. At least we won't provide their bankruptcy court with money they have made from sharing "all identifiable user information" INCLUDING "credit information, e-mail addresses and telephone numbers."
There are plenty of other auction sites out there and I, for one, am having INFINITELY better luck selling and buying using non-eBay resources anyway.

Does anyone have a Sam's PhotoFacts for a Hallicrafters S20R?
Would be glad to purchase or pay for a copy.
Also need one of the small knobs for S20R, or may be interested
in a complete or partial parts unit if someone has one.
Thanks - Tom N0BS

3069. Free: HP-200 D (in the original "A" case style)

Newsgroup: rec.radio.amateur.boatanchors

Message-ID: <M7ux6.82433$K54.10761065@news02.optonline.net>
Source record: 54829

This item must be picked up about 60 miles east of New York City on Long Island.

I have an HP-200 D Audio Oscillator which is in the original very old "square box" case with no trim. It's the same case the famous first "A" model came in. (The first instrument every produced by HP) It used to work fine but, hasn't been powered up in years. It's in fair to good original condition except for the main tuning dial which I polished in about 1975 (a full restoration would need to paint it gray again with white in the numbered indentations).

I rescued it from going to the trash (with permission) from a laboratory at Columbia University's EE department, probably around 1974. I'd guess its from just after Armstrong's days (He invented FM radio at Columbia) but, not by much. It's probably from the late '40s or more likely the 1950's.

Included is an original manual (same model number but slightly different serial number range) with schematics and calibration procedures that I bought on eBay. It goes with the generator, I'd take $10 to cover the manual but, it's more important to me to save the machine from being scrapped.

So, both are free but must be picked up at my home.

Phil,
I've got a 1952 Handbook. Although there are two or three HF
transmitter projects using a 6AG7, none of them additionally use a 1625 or a
6V6. I'll dig into some of my Orr and Jones Handbooks from that era and if I
find anything I'll drop you a line.

Hi Phil,
A quick check of my '52 hanbook does not turn up a rig with this tube line up. There is a transmitter with a 6AG7 osc and a 6V6 doubler, but it uses a 813 as the final. There is another project that uses a 6AG7 followed by a 6L6 (same base as the 6V6), but it also uses a different final. If either of these will do you any good, e-mail me and I will attempt to scan the pages and e-mail them to you. 73,

Kevin, K9HX

Hi!

I have for sale one each 8072 and 8122 transmitter tubes. I want to sell them because they are not glass bottles but "ceramic" or something. They are in original boxes and I do not know if they are used or not, but I believe they are NOS. Price? Maybe USD 150.- for both? Postage might be a bit high since I live in Norway.

(I could possibly trade them for four working 45's or two 811A)

Willy.

Sorry OM, I don't buy it. I am certainly no big fan of EBay, but use it on rare occasion. I just went through and read their privacy policy and have to respectfully disagree with the statements posted here. Actually, I find their privacy policy better than most I've seen on the Internet. They certainly do NOT make money from sharing "credit information, e-mail addresses and telephone numbers" as you allege.

I would just urge anyone interested in this matter to read the info for yourselves and not take the info posted here at face value.

And in addition they've changed your ability to see who the bidders were on items unless you were the seller.

I think that MANY of their auctions are shilled, and they don't care, because the shills are very often their regular sellers.

I bid (one bid) a signal generator last week, to be outbid by a dollar during the last five minutes, and then saw the same auction begin again just 2 hours after it ended-----I can only think that it was a shill trying to get my bid up and when the shill "won" the seller knew immediately and just got on with the relisting. I know there are many legitimate sellers, buyers and bidders, but a great many of the unbelieveable bids are exactly that.

3100. Gonsett II and 12 modern preamp ?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-04-01 23:20:57 UTC
From: Robert Greene <rgreene@pivot.net>
Message-ID: <3ac7b982_2@news.cybertours.com>
Source record: 54868

Has anyone connected one of these new 12v preamps to a Gonsett II? Do you need to add a coax relay, or will the inherent delay of the manual T/R switch provide the necessary isolation?

Would appreciate any info / experience...

3101. Re: Johnson Viking Valiant question....

Bill,

The stock Viking II is a better AM transmitter than the Valiant because in 1956 when they designed the Valiant, EF Johnson (like other transmitter makers) wanted it to sound more like a sideband voice channel. So the stock Valiant contains a clipper section and does more low frequency and high frequency rolling off. If you circumvent that clipper, though, the transmitter sounds better than a Viking II -- and it's easy to do. If you're interested, email me and I'll give you a schematic for the modification.

Rob K6RB

That may be so.....

However it's also a new federal law.

You - WILL BE - getting more emails and snail mail letters now til the end of July from your banks, credit card companies and anyone else that has some info on you. This includes how much is in your accounts, how much you are borrowing, and how fast you pay your bills.

You - MUST - send a letter back to them stating you DO NOT want to release this information. Many will have deadlines. (usually 30-90 days)

If they don't get that letter... they are free to sell your information to ANYONE that wants to buy it..

It's your responsibility to let them know that you don't want this to happen.

The valiant has very good audio, don't remove the clipper! It had absolutely nothing to do with trying to sound like a sideband rig but to make the transmitter more efficient. That clipper was the reason the val. had so much punch and was one of the better am rigs. The vicking 500 was the one to beat it had high level clipping.

The dielectric in an aluminum electrolytic capacitor is the anodic oxide film. In the absence of a polarizing voltage, this oxide film gradually hydrolyzes, decreasing the voltage rating of the capacitor. The effect is not uniform across the capacitor foil, however, so the capacitance, which should increase if the decrease in film thickness were uniform, may actually change the total capacitance very little. This gradual hydrolysis is one factor behind electrolytic capacitor aging, another being the evaporation of the electrolyte. Thus capacitors that have been left unused for a while need to be reformed, the process where the oxide film repairs itself and regrows to the original thickness in the presence of the proer polarizing voltage.

When an electrolytic capacitor with a higher voltage rating than is needed is used in a lower voltage circuit, the result is that it gradually becomes rated at the lower voltage. It is typical to derate an aluminum electrolytic capacitor as much as 30 percent. But going much over this is wasting money and may cause a significant change in capacitance.

In this case, using a 400 volt electrolytic in a 300 volt circuit is fine. But I would not consider using a 400 volt capacitor in a 100 volt circuit.

Thanks for the input, but I found the problem was that the crystal control unit was not switching out all the way (linkage problem) and adding some stray C to the L.O.. This was pulling the L.O. down in freq. All's well now and I appreciate all the excellent comments.

3130. FS Daystrom, Weston, Singer, Leeds & Northrup equipment Decade boxes, meters

Hello Folks,

Are you are interested in that test equipment that we all used in
highschool? Remember,
the galvanometers, single purpose meters by Weston, Singer, Sensitive
Research,
Daystrom. The decade boxes and micorammeters?
Some of this equipment has been sold to collectors, museums, and schools
already

I have quite a bit of this equipment on my new Rescue Electronics Surplus
website.

Now the site is not complete,but there is quite a bit of equipment up here.
I have many more meters, for AC DC voltage, AC, DC amps, microamps,
milliamps etc.

This is my first attempt at a website so I would appreciate any comments on
how to improve the site.

More to come in the way of potentiometers, meters etc,

Please check it out by clicking the link below.

Thank you

Paul A. Cianciolo

See
http://www.metcoelectronics.com/cancaps.htm
This fella sells some NOS can caps at very reasonable prices. AES
has a few "new" ones but you're looking at $20-30.
I don't have much faith in old caps, reformed or not, but at that
price - especially if he has the exact one you want - it'd be
worth a gamble. Electrolytics like to be used, so if you're gonna
listen to the radio often, then it may be ok.
If it were my radio, it'd probably be getting new, modern axial
caps. If the radio merits top notch aesthetics, then replacing or
re-stuffing the old can is an option.

If there is room under the chassis (and in this radio, there should be!) I'd just leave the can in place and replace the caps with modern axial lead ones mounted under the chassis. Unless you pull the chassis and look underneath you'll never notice the difference. Be sure to disconnect the old cap and don't just bridge it with the new ones. Some people do open up the old caps and stuff new ones inside, but it's not worth the work IMHO.

3146. Re: Metal Can - Body Capacitor Source

Newsgroup: rec.radio.amateur.boatanchors

Source record: 54756
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.boatanchors

I have a very limited personal stock of NOS Metal can type caps for sale, not cheap at $17.50 each but they have all been tested and run up past their rated voltages with no problems. Small and larger size units, not a large amount left, but I have enough to help a batch of people.

I also have the original multi section NOS paper body type used in classic 5 tube am/fm radios for similar prices. I hand tested each cap when I purchased a closing wherehouse stock last month. Any cap sold will tested and operated at the full rated voltage plus before shipping.

Email me direct if your interested...

These are Original NOS Metal Can Sprague, Pyramid and Mallory brand/type caps in the slim and standard size packages.

cheers and thanks

Guess what!

Fair Radio's prices for R-390As are now HIGHER than EBay.
$495, working without meters or covers
$550 with cheap plastic meters

Even the "repairable"units are $395.

And NEW imitation nameplates are $17 ea

There goes the neighborhhod

3148. Another Capacitor Question

>
>

Sorry, I meant $310 (but w/o meters and covers).

If 390As are worth that much, what about R390/URRs, which are better and rarer radios? (I have 2 For Sale)

Actually based on prices for individual parts, I think I'm going to break them down and sell the pieces!

Worth about $1200 each that way

BTW, even more interesting, Fair Radio became an EBay bidder on a 390A last week. Wonder if they needed parts or were driving up the market price?

Mike,

There are some sources of can caps, but they're getting very spendy.
Amateur Electronic Supply, RF Parts Company, Surplus Sales of Neb.,
and Fair Radio Sales all come to mind. The capacitance values are
not as critical as you might think, which will expand your horizons
somewhat. For example, you can probably do just fine with caps up
to 47 uF in place of your original 30 uF, and anything from 250 to
500 uF in place of the original 300 uF.

If you're not concerned with the equipment looking original inside,
then you can certainly use individual axial-lead caps in place of the
original can-type cap. This will almost surely be the cheaper route
as far as parts cost.

SAFETY WARNINGS concerning electrolytic caps:
1. Be sure that the voltage ratings on your replacement cap meet or
exceed the ratings of the original cap. Electrolytic caps can
explode violently if their voltage rating is exceeded.
2. Be sure to observe correct (+) and (-) polarity when you install
new caps. Electrolytic caps can explode violently if they are
connected backwards.

As for how to connect them, a look at the schematic will explain how
they're connected electrically. Can-type caps typically use the can
itself as a common ground for all sections, and the can is normally
connected to ground (screwed, riveted, or soldered to the chassis
itself in most cases). Some cans have a paper or plastic coating to
insulate the can, and may be mounted on an insulated footing to float
the can above the chassis. In these cases, the can is NOT ground, and
you'll have to observe that when you replace it. Match up the square,
triangle, and semicircle icons with the markings on the old can, then
connect your new caps as such. There are often some components mounted

off of the can cap's solder lugs (bleeder resistors, etc). In place of the cap terminals, you can use terminal strips. The "gotcha" is often a lack of space to mount individual caps under the chassis. In some cases, I've mounted them on pieces of perf board standing upright above the chassis in the space formerly occupied by the can cap. You may have to get "creative".

It's a shame we can't just walk down to the corner TV shop and buy any electroltytic cap right off the shelf like we used to...

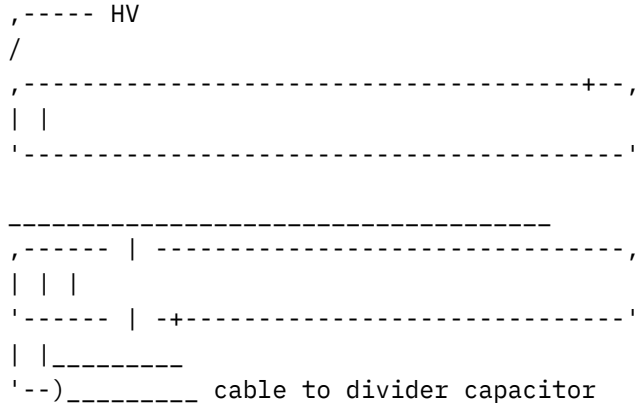
sci.electronics.design,sci.electronics.components,rec.radio.amateur.homebrew,rec.radio.amateur.boatanchors,rec.radio.swap

Hello Gang,

My AoE coauthor, Paul Horowitz, is looking for an old classic RF transmitter neutralizing capacitor - some of you know what I mean, the ones with two plates made from large discs, with one adjustable to set the spacing. I had a nice one with 4" diameter discs, but I modified it for a 20kV RF divider.



Yes, better done other ways, but that's another story.

If anyone has one he'd be willing to part with (for a good price, natch) or knows where one might be had, we'd really appreciate it. These caps are very good pedagogically speaking, and one will make an excellent addition to my friend's teacher's bag of show-and-tell stuff for his students. They are virtually the ideal textbook capacitor, the type one never sees in real life these days!

Thanks,
- Win

The student should, by now, have enough experience and freinds with the rquired equipment to have one built for a couple of crates of Bud.

First, you have two choices regarding the old can capacitor: You can either leave it in place disconnected, or restuff new capacitors inside of the can replacing the old innards. If this is any sort of vintage BA set, having a gaping hole where the can is supposed to go is a cosmetic and restoration no-no.

You cannot parallel the new capacitors with the old ones, however. It is fairly simple to add a tie strip or two under chassis to provide mounting points for the new capacitors. Most modern caps will be a fraction of the size of the vintage cap in the set.

The smaller 300m/25v cap was probably across the audio tube cathode, and it is often just as easy to mount the new cathode bypass right at the audio tube socket. You will find other convenient common tie points under the chassis where the higher voltage caps could also be installed, no doubt.

> you can certainly use individual axial-lead caps in place of the
>original can-type cap. This will almost surely be the cheaper route
>as far as parts cost.

I just did this very thing to the Hallicrafters S38 I restored a few weeks ago. I followed the schematic to make sure of all values and polarity, then looked at the actual can that was there to make sure the leads were correctly lined up. The can itself gave the values and the color of leads they went to. It was a fairly easy way of fixing the problem, and although it doesn't at all look original, with a little care it can look nice, and is certainly cheaper than finding one multi-section cap.
Just be sure, as the previous fellow mentioned, to observe the polarity of the leads.

Exactly, and indeed both Paul and I have had some very
nice air capacitors made in the machine shop, however
the original item, complete with the threaded ceramic
standoff, is very much to be preferred for a teaching
tool. Consider, the elegant engineering and earnest
craftsmanship of that early great old era can live on,
newly minted, by becoming ingrained into the new mind
of a young Harvard student, plus all the students from
other schools who come to Cambridge to take Physics 123
each summertime.

So someone, please, let's find one of those old beauties
for the cause. And for the Bud. Ribbit.

Thanks,
- Win

Will TRADE TUBES for EICO 667 manual copy!
Am deseperate. Need Instructions for EICO 667 tube tester soon.
I will trade 10 or+ GOOD 6v6 addio output tubes. Good tested pulls in
boxes.
Tested in Superior TR-11 tester. Reason: I shipped my Eico 667 w/roll
chart,
extra data books etc. to a Man in NY. He can't figure out how to operate
it.
He thinks it is broken. I know it is not by his description. I can not
tell
him how to use it, unless it is infront of me. I need a partial manual
(instruction section),
to send him. I will be very generous in tube trade.
Please consider this offer. Even scanned image files of instructions
will do it for him.

Thanks for reading,
John Williams

We all know that there's a good resource available for finding schematics of BA's at:

http://bama.sbc.edu/

and many links beyond that.

But what if you are looking for a schematic for old BA era test equipment, like an HP-606 or an HP-5345L or a Wavetek 142 or a Tek 465B? Is there a comparable archive for BA era test equipment?

If there isn't an archive, do you think one should be created? I would think that it could function similar to the BAMA site, except that it's focus would be on popularly available surplus market test equipment.

What would be needed to host such an archive, and is anybody interested in doing it? I sure could help start it off with a flock of items!

First BA Panoramic ?? Go to:

http://www.megacycles.com

... go to ham radio section.

Worked on this all night. No sleep. Pretty neat though. Takes about 2 min to download the 517 KB file. You will need a quicktime player from Apple. Do the free download thing for Windows or Mac here:

http://www.apple.com/quicktime/download/

On Windoz machines - click the link on the page and select "open at remote location" or some such nonsense. This will download it into a temp folder. Dialog box should pop up after 2 minutes (when the papers stop flying) and then select quicktime player app to see it.

Works and looks the same on Mac or Windows.

Wierd but fun.

Gotta go to work. I'm already late.

Whatsamatta Psycho, you don't like products that have a useful life
of more than two or three years. Is that because your personal skill
set is incapable of producing an innovative product having a useful
service life of over one-hundred years, as many of those products
with the claw feet, artistic scrolls, and gold-leaf trim have?

If you prefer the quality of products manufactured today with a
useful service life of 3-years, incapapable of being cost effectively
repaired, then destined to being ground up for scrap, it is likely
because you yourself are personally incapable of designing or
manufacturing anything superior -- as those who have preceded you
(and me) clearly were.

Sadly, it appears the technology with which we are familiar can
be characterized as producing ONLY high-performance, low-quality,
short-lived, throw-away specialty items. Items of this type have
only a very limited value to the needs of our core infrastructure.

By contrast, that claw-footed punch press, bathtub, and decorative
turbine housing existed long before high-tech throwaway products, and
some are likely to remain in service long after many of today's "hot"
items are just a fading memory. This is because beyond the basic
utility of such low-tech items, the design skill and craftsmanship
that produced them far exceeded that of most of today's over-
specialized, high-tech design types who, without the help of
a computer, design handbook, and product catalog, are incapable
of designing very much of anything yet alone add decorative
flourishes as as an indication of the designer's pride in his
accomplishment.

Hi Win,

I recall two firms making neutralizing capacitors.

James Millen in Malden, MA made the disk style units precisely as you describe. Unfortunely as you no doubt know, Millen has been out of business for some years, but if you prowl around surplus dealers in the Malden vicinity, you may be able to find one or two. The Millen part number for the 2" diameter disk neutralizing capacitor is No. 15011. (You might also want to have someone check the MIT ham radio flea market, since I recall one dealer there who regularly has transmitter type variable capacitors for sale.)

Another potential source would be E.F. Johnson Company in Waseca, Minnesota. (They MAY still be in business.) Johnson made the Type G neutralizing capacitor. By contrast with the Millen product, Type G consisted of two coaxial cylinders with a screw adjustment that determined the degree of penetration that the smaller cylinder made into the larger one.

National Radio (famious for their HRO series receivers) was also located in Malden and made a component line, and although they did produce a line of variable capacitors, I don't recall them offering any neutralizing capacitors.

Win, for whatever it's worth, neutralizing capacitors of the above type were generally associated with triode final amplifiers whose popularity declined rapidly shortly after WWII. As you know, triodes exhibit considerably higher plate-to-grid capacitance than do the tetrodes that rapidly replace them (at least in ham use). Becuase of the shielding effect of the screen grid, plate-to-control-grid capacitance, tetrode r.f. amplifiers required very little neutralization, hence the market for neutralizing capacitors just about completely died after a huge increase in the use of tetrode final amplifiers circa 1950 or so.

I received by first ham license while in middle-school (1952). My second rig used a donated Taylor 100TH triode, hence I at one time owned a Millen neutralizing capacitor. Sadly, that capacitor went with the rig at the time I disposed of it.

Good luck with your search.

Harry C.

p.s. Both the Millen and National products are depicted in the catalog sheets bound as part of the ARRL 1956 "Radio Amateur's Handbook."

That is economically sound, for any technology that changes rapidly. As you mention, infrastructure technology changes less slowly, and should be built to last longer, but even that is changing relatively rapidly (on the order of decades rather than centuries).

Of course, some technologies change slowly, and these items should be built to last.

Try www.hosfelt.com or www.mouser.com
One of these two places should have this connector.
Online catalogs or will send you one for free via a 1-800 telephone call
request.

Actually, I would. There are problems, however. Space and time. I
think I'm pushing the envelope on both. I do have a few HP and GR
manuals on BAMA, but I've actively discouraged additional submissions
of test gear from the big commercial firms because of the limits of
server space available to me...not to mention the time required to get
the manuals on line.

>Ed Price wrote:

Thanks for the plug. 8*)

Despite all of the problems experienced recently, BAMA had its busiest
month ever in March. The number of simultaneous ftp connections
allowed has been increased and so has the size and speed of the disk
that holds the BAMA files. Users should notice an improved level of
service from the site. I'm sure this is the case, because the number
of complaints has dropped to zero over the last couple of weeks.

>> and many links beyond that.

Not that I know of. I certainly wish that someone would start an
archive for test gear, though. I beleive that there is clearly a need
for such a site.

What's needed is a very fast internet connection, a large and fast bit
of storage space and many hours to manage the site.

I would certainly like to see a test gear site started. I know that
there is a lot of good information to put on such a site, since I have
been offered quite a bit over the last few months. There is also
probably a need for a similar site for military communications gear.

Greetings...

I am in the market for a good, working Heath SB-220 with full output tubes. Cosmetics are not particulary important, but I don't want it looking like it barely made it through a hurricane, either...<Grin> It just needs to work, and I prefer that the seller take PayPal.com for payment, as I need to get it in the shack as soon as possible. I need to be QRO again. :) This past weekend I screwed up royally. I have been running the SB-220 with my TS-570DG, among other rigs, and it performed beautifully. I decided to get an old Swan 700CX for nostalgia's sake, and yup, you guessed it, I forgot to turn the amp off on keydown. ZAP! What a Lid!!! Oh well...live and learn. I've sold off the SB-220 as 'needing work', with a full explanation as to what happened, as there is no one around here that works on them except for a CB shop down in Rockford, IL, and they said they couldn't look at it for 4 to 5 weeks. Hence, my search begins for another...

My wallet is pretty thin right now, but I will pay a reasonable amount for a good, working 100% out SB-220. Would prefer the Harbach soft-start mod, but can do without. E-mail if you have one to sell reasonably.

73~~~

: with the old stuff.

ROFL! Well said. At least when they break, you can fix them
with relative ease. Also, note the prices these items (75A2-75A4)
continue to command when auctioned on eBay.

My dream receiver is the 75A4, but I'll settle for an HRO-60.
Boat anchors both, but they perform their intended function well,
and will still be alive and ticking when the last ICOM and Kenwood
has long since bit the dust! ;-)

Until then, I suppose I'll just have to make my Hallicrafters
SX-71 and B&W 5100 make do for another 30 or 40 years!

: That is economically sound, for any technology that changes rapidly. As you
: mention, infrastructure technology changes less slowly, and should be built
: to last longer, but even that is changing relatively rapidly (on the order
: of decades rather than centuries).

On that point I have to take serious conceptual disagreement. It is not economically sound when fuctionality requirements are outpaced by the availability of new technology. New technology is not always particularly useful, as we are currently seeing in the PC marketplace.

For example, except as toys and novelties, there are no broad-base requirments for 1,000-MHz computers. In fact, a 200-MHz Pentium Pro system provides vast overkill for most real computing and communications requirements. Also, were it not for the gross designed-in inefficiency of the software currently produced for common business application, it would be difficult to justify demand for even a 200-MHz machine.

Don't read me the wrong way, because 800-1,000 MHz systems are wonderful for playing fast-paced, graphically intensive games, but other than that only a negligibly small niche market in science and engineering design requires performance at this level. Still, for the vast majority of real applications (such as word processors, spreadsheets, information retrivial, and general purpose computing), things that would be seriously impacted were the technology not available, is becomes difficult to rationalize a need for much beyond 100-MHz system performance.

The same holds true for mass storage. Few people have real working needs that require more than 1-2 Mbytes of storage (exluding space taken up by today's heavily bloated application packages).

Getting back to economics, the problem is this. Given an economic recession that severely impacts consumer spending on recreation and luxury items, no market exists for the newest generation of technology (computers). Couple this with a home computer market that is alread saturated and it follows that this total market

will shrink to the level of replacement demand (not insignificant only because products of this gendre are produced so poorly that their useful service lifetime is limited.

Industry is a similar situation, although for entirely different reasons. That is, industry on the whole has few performance requirements that can justify the purchase of newer technology when the older products are perfectly adequate, except for useful service life and reliability issues. Here again, the market for new computers is limited to replacement units.

Hence, I don't believe it is valid to justify the short useful service life of high-tech computer products as making economic sense based on the rate of technological advancement. Also, I'm not sure that a careful analysis would support the economic sense of purchasing cheaply constructed, short lived products only to replace them with newer products when they fail, except during times of extreme and continuing affluence.

For what it's worth, I'm predicting that during the current economic shake-up, people are going to begin to place more focus on the steak rather than the sizzle that fueled the immediately past 2-3 years of boom times. Industry has already moved in the direction of regarding computers as commodity items, a view that is likely to overtake the entire market. As this tendency advances, the key discriminants between computers is going to become price and quality (equating to useful service life) rather than price and performance (as it has in the past).

The sizzle days were good to a lot of people, and the intensity of the sizzle allowed a great many shoddy products to be successfully marketed, partially the result of naive consumers. Computers were sold on the same footing as "Monster Speaker Cables", with all focus on the sizzle and none on the steak. In many cases, as it turned out, there was no steak!

Today, Intel and a majority of the PC houses have already felt the pinch and have begun belt-tightening. Expect it to continue for some time to come. Some of it, like demand for the Mood Ring and Hula-Hoop, will never return.

When things finally recover and stabilize, I'm predicting that the demand for computers and other high-tech products will have an entirely new slant, 5-year warranties will become the norm (the technology, were it to be properly implemented, can easily support this), and any demand for performance will be gated by actual need.

In other words, the PC marketplace will begin to take on an appearance very similar to that which has always existed in the industrial controller and computer marketplace. You may even begin to see the use of standardized qualification testing of computers, just

as the government already requires of many other products.
Now this would make economic sense and, at the same time, allow
workers in the field to once again make long-term personal
plans or hold a job with the same employer for more than 3-4
years!

Other than the fact that many of the folks who sold sizzle and bought
3-garage McMansions will predictably end up out in the street,
it should be a refreshing change.

Hey, maybe someone will even make a flat-panel monitor with Claw
Feet. That would be cool!

Harry C.

You're talking about products from a time that can't be put far enough in the past fast enough. These products were manufactured by slave labor working 6/14 at poverty level wages. These people worked and lived with dismal and unhealthy conditions. The average lifespan - even in the US- barely broke into the 40's- and this into the early part of the 20th century. This stuff about "elegant engineering" and "earnest craftsmanship" is nearly a psychotic hallucination. I don't call using 10-100 times the material required engineering of any kind. So if we stick a manimal symbol on it- you would consider the 4000 pound cast iron 1/8th HP engine running on crude oil to power your car? I've seen your wretched New England mill towns- and thought I was in hell- these places stand as a monument to wicked manipulation of resource for personal gain- they killed people and nature with reckless abandon. Now take a look at that hysterical excuse of post and ask yourself who the real psycho is here.

BTW- most of that ornamentation that you consider indicative of the designer's pride was pure popular glitz of the time- looks like something created by an opium user with severe lead poisoning. The engineering profession was not held in high regard in those days- the last thing allowed would be individual expression of any kind- so you're wildly off the mark there, boyo.

Source record: 54704

Dave, Gary & Ken:

Ken, at BAMA, said that his site "mission statement" should be to include only tube equipment likely to be found in a ham shack of the BA era. It's HIS site, so he
can set the rules, and I respect that. He has a very valid point that management time and
storage is limited, and BAMA must have some type of limits.

Now, I might argue the point that a lot of nice industrial test equipment of the BA era has found their way into our shacks now. (Back in the era when a Tek 555 scope was a dream, hams would be doing good to have built a 5 MHz Heath OL-1.) So, by Ken's criteria, the OL-1 would be welcome, but not the 555.

Similarly, I tried to contribute the manual for a Fisher 80R FM receiver. Again, it certainly is a classic tube era receiver, but not "ham shack."

So, that still leaves the question open; is there a home somewhere for BA test equipment and other stuff that doesn't fit into the "typically present in a BA era ham shack" criteria?

:
: You're talking about products from a time that can't be put far enough in the
: past fast enough. These products were manufactured by slave labor working 6/14
: at poverty level wages. These people worked and lived with dismal and
: unhealthy conditions. The average lifespan - even in the US- barely broke into
: the 40's- and this into the early part of the 20th century. This stuff about
: "elegant engineering" and "earnest craftsmanship" is nearly a psychotic
: hallucination. I don't call using 10-100 times the material required
: engineering of any kind. So if we stick a manimal symbol on it- you would
: consider the 4000 pound cast iron 1/8th HP engine running on crude oil to
: power your car? I've seen your wretched New England mill towns- and thought I
: was in hell- these places stand as a monument to wicked manipulation of
: resource for personal gain- they killed people and nature with reckless
: abandon. Now take a look at that hysterical excuse of post and ask yourself
: who the real psycho is here.

Actually, anyone but a psycho realizes it was those wretched New England
mill towns that brought the remarkable benefits of the Industrial
Revolution to America. Without these, most Americans would be limited
in both productivity and lifestyle to the fruits of their strenuous,
manual labor.

I'd call that a definite plus, but then I'm not a psycho.

: BTW- most of that ornamentation that you consider indicative of the designer's
: pride was pure popular glitz of the time- looks like something created by an
: opium user with severe lead poisoning. The engineering profession was not held
: in high regard in those days- the last thing allowed would be individual

: expression of any kind- so you're wildly off the mark there, boyo.

Not even a clue! ;-)

Indeed, the designers/craftsmen of that day had infinitely more creative freedom than do the narrow skill set armies of todays professionals who daily toil in the grand bland environment of their rat maze style working facilities. Indeed, the mental health hazards created by this environment rival the physical health problems created by the worst physical health working environments that existed at the turn of the century. In fact, when you total today's deaths due to stress related conditions including suicides, it rivals those due to direct physical causes at the turn of the century.

Why do you think it is that many of today's professionals are driven to pursue a "more simplified lifestyle" after spending as little as 10-years working within one of today's "ideal" organizations?

Harry, I know New England, and the majority of those mill towns arose to create the textile industry as early as the early 18th century [early 1700's to you]. New England was ideal for this because of all those rivers which were good not only for water power but also for flushing waste products. The "iron age" of the industrial

revolution was supported by the huge iron deposits in the Great Lakes region and the industry built up in that area- namely Michigan. The Erie Canal, which was initiated by another *Clinton*, also known as "Clinton's ditch" at the time, governor of New York, was absolutely essential to making the connection between the iron ore, coal, and product transport. Note that we're not in New England- and actually New England underwent a population drain at about this time due to people moving to the midwest. For your information, Michigan was considered part of the Northwest frontier as late as the latter part of the 19th century. New England never had the scale of industry that was established in the midwest- and this is what you have in mind with your reference to industrial development and the "remarkable benefits of the Industrial Revolution..." in America. .

>

Because many of these people were not fit for the professions to begin with.

While you're hunting, be on the lookout for a modification that
FMs it. I had one of those setups a loooong time ago and the FM
was superb.

It has always been claimed that the leading edge of computing is unnecessary for ordinary applications, and it's always been true for a few months. The applications have always expanded to use the speed and memory capacity available. While it is true that with a great effort, much business software could be compressed by a large factor, the cheapening of hardware speed and capacity makes

that uneconomical. As to the need for higher speed graphics and floating point computation, imagine a computer that would produce a screen projection of a three-dimensional antenna radiation pattern in good quality graphics, where you could grab and stretch the antenna wire with the mouse and have the displayed pattern adjust immediately to show the effect of the adjustment? I think that would take more than present-day capability, but it would sure be handy, and I think it will be possible some day.

FS: More estate stuff. I have a very clean Collins 30L-1 Linear
amplifier. The front panel and trim ring
look extremely nice and clean with all original knobs. There is
also an extra set of 811A (qty 4) tubes
that go with it as well as a manual and I want $425 for it checked.
It has no cabinet but the 30L-1 is
totally encased whether it sits in either a cabinet or rack or out
on your desk. This unit was rack
mounted but the rack it slipped into wasn't there. If interested
call Mike at (979) 693-1461 eves and
wk

Please attempt to contact Dr. W. Thomas Joyner,
Elliot Professor of Physics and Astronomy
Office: Gilmer 009 Phone: (804) 223-6176
Hampden-Sydney College, Hampden-Syndey, VA, USA.
http://www.hsc.edu/
mailto:tjoyner@tiger.edu

When I was a student there, the attic of the science building
contained a beautiful set of such demonstrator equipment, some
of it hand created by a professor in the late 1800s. There
was a large glass disc, glass column-with-sphere-and-tube
transmission lines, and hand blown gas discharge tubes with
uranium glass. I regret I no longer remember if the specific
item you are looking for was there.

None of this equipment had been used recently and the College
may well be happy to place it on long term loan.
-Dan Barlow

P.S. I was taught from your book and found (and continue to find)
it an excellent work. Thanks very much!

This tube tester is a drug store self service type in a grey metal cabinet. it has shelves underneath that give me a nice place to store tubes. there isn't much to it so I am sure I could get it working, and I would love to be able to use it ,, if I only had the charts. Model 201 made by the Mercury electronics corporation. it has tube sockets numbered up to 46. Any help you can offer would be really appreciated. Phil

Since the expectation of life is now a whole lot longer than it was
then, this claim seems difficult to justify. The physical hazards of
bad food, unheated housing and work-shops, foul air and dirty
drinking water would seem to be much more lethal than today's mental
health hazards.

> In fact, when you total today's deaths due to

"Deaths due to direct physical causes" presumably does not include
those resulting from direct infection by tuberculosis, cholera or
typhus - a slightly idiosyncratic interpretation of "physical cause".

> Why do you think it is that many of today's professionals are driven
> to pursue a "more simplified lifestyle" after spending as little as

They aren't "driven to pursue a 'more simplified lifestyle'" - they
are paid so much that they can save enough to make this a possible
choice. Your endlessly creative ancestors didn't have this sort of
disposable income, so they could not make this particular choice - it
was "root hog, or starve".

Wow! When did this newsgroup become one of semantics and philosophy? I subscribed to learn about design, help others with design, and simply have something enjoyable to read. All this junk about quality and craftsmanship is just a little troubling. And to think all this started over a professor's request for something not normally found...
Pete

Source record: 54733

New program RXZCALC.exe

PARALLEL & SERIES EQUIVALENT CIRCUITS
==========

For given frequency in MHz this calculating utility will tell you -

L uH which resonates with given C pF and vice-versa.
Reactances of L uH and C pF.

Z magnitude of R and L in series or in parallel.
Z magnitude of R and C in series or in parallel.
Angle of Z

R and L, and R and C, for given Z and angle, either series or
parallel connected.

The basic calculation is as follows - For given values of Rs and
Xs in series, the program calculates the equivalent values of Rp
and Xp in parallel, for a value of Z common to both circuits. Xs
and Xp can be entered either as ohms or in terms of L uH or C pF.
All input and output data is displayed on the screen as an
internally consistent group.

Input and output data is in a form which facilitates step-by-step
network analysis. For example it is easy to calculate the input
impedance of a Pi-L network for a given terminating impedance R+jX
and given L uH, C pF component values. It is necessary for the user
to know what he is doing and not get lost.

Best to begin with sketching a circuit diagram on paper showing
component values. Impedances at various points can then be recorded
to be used later to calculate currents and voltages from input
through to output terminals. Will provide a sound understanding of
how a particular network functions. No more arguments about which
configuration of antenna tuner has least loss.

Download RXZCALC in a few seconds from website below. Only 50
kilobytes. Not zipped up. Run immediately.

If an old Millen neutralizing cap doesn't appear, maybe you could
actually buy a brand-new one: Unadilla, the balun people,
seem to own the Millen tooling and rights, and claim to offer
the products. The Website is http://www.unadilla.com .

A note on the Website says that the owners are ready to retire
and would like to sell the Unadilla and Millen businesses to
somebody who would like to keep them going. So here's
a chance for somebody who loves the old stuff to keep it
alive. Don't know how big the market is for neutralizing caps, or
829B sockets, or all that lovely "Designed for Application" stuff we
used to drool over in the Handbook catalog pages...

I am new to this ARRL stuff. I got interested after building a single tube regenerative receiver. I passed the tech and general written tests last week and am just starting on my code. I found an HA-1 keyer unit at a secondhand store for $10. to my amazement it worked. There is an octal socket out the back end with a jumper across two pins. I assume this connects to a transmitter. It would be nice to hook the HA-1 up to a transmitter (when I get one). Can anyone tell me the pinout of the connector?

I too like using ebay, but to give your name/address/email/phone number/credit card number in confidentiality and later be told that they are going to sell this information to others (spammers, credit agencies and the like) is a pretty disgusting way to do business.

I used a Millen GDO when I was a kid. I saw some coils for one
somewhere recently on the net. Whoever had them didn't know what they
were for.

From: Mark Bell <bell@blazenet.net>
Message-ID: <tcsrcpkv8c1s4a@corp.supernews.com>
Source record: 54599

Folks --

Almost finished with the 7 month restoration. After testing the 40/40/40 uF
450V cap, I found it was really a 27/35/35 uF cap, so I have acquired individual
reaplcement caps.

I realized I have a B&W LP filter that I believe came out of my original (novice)
5100B. The unit I'm restoring doesn't have the filter. How do you secure the filter
to the chassis bottom? My manual is photographed (probably of a photograph...)
and I can see no brackets etc to hold it in. The filter fits in nicely, and occupies
the correct space as indicated by the residual lines on the chassis bottom.

Thanks

Mark K3ZX

3240. WTB: Halli. SX-62 knobs

Looking to buy the "band selector" and "sensitivity" knobs from a
Hallicrafters SX-62. The band selector is the same knob as was used on the
"tuning" and the sensitivity knob is identical to the "volume" knob.

I will also buy an entire SX-62 "parts rig."

Thanks!

Personally, I think it would be a great idea. I have several that I would be
able to contribute, and I'm sure that others on this NG would do likewise.
Needs someone with the desire, and skills, to implement. Another possibility
is for the BAMA folks to expand the scope of their site.

3255. FT: Exc. Viking Valiant I

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-04-07 17:09:48 UTC
From: "D. S. Platt" <jeepp@erols.com>
Message-ID: <3ACF49DB.C6E5FADF@erols.com>
Source record: 54614

After considerable deliberation, I've decided to divest one of my Johnson Valiant I's. This particular one has a new front panel and cabinet, re-screened and painted by Dee. Dee's work is factory perfect... some say better.. some say too good (Dee's units have a more glossy, automotive type finish). The unit is fully operational and very very clean. Its had the "ER" audio mods performed as well as the VFO screen resistor and VFO B+ regulation. Its currently on the air and I'd be happy to sced anyone interested and/or send a digital pix (although all you'd see was a factory looking Valiant!! hi). The transmitter is available for trade....only. I have no desire to sell it outright. I'd like to trade it for a military AM/CW transmitter or one of several ham type units. I'd consider a fully operational GRC-19 setup, for example. I'm also looking for a Hallicrafters HT-20 transmitter or an SX101/HT-32 combination. I have units such as the Viking I and II, so no interest there. The only other caveat is that I can't (read: won't) ship this puppy. I have had lost 2 units (incoming) that are now used for parts. Valiants just don't make the trip... reliably. So, this would be a pick-up only deal, or potentially FOB delivery to a shipper/packer of your choice. Don't like to make things difficult... but. This Valiant has been a real pleasure to own and use. Having 2 of them seems a bit much, though. So if there's interest out there, let me know. I'd be happy to discuss whatever. Thanks
de Jeep/K3HVG (Frederick, MD)

3257. Help ID a Mystery Military WW-II VHF Receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-04-07 18:28:50 UTC
From: Rob Dunn <robdunn1@earthlink.net>
Message-ID: <C%Iz6.11448$VF3.1067616@newsread2.prod.itd.earthlink.net>
Source record: 54617

Hi All,

I need help identifying an old miltary receiver that found its way home from the local ham swapmeet this weekend. It was lonely and since nobody could ID it nobody wanted it. Every boatanchor needs a home so into the van it went. The front panel had been repainted with crinkle black over all the lablels and the ID-Tags as well as one switch label were missing. Here's what I know about it.

1. It is WW-II vintage. The MFP information on the chassis is dated Feb 1945 and inside the back of the fully enclosed dustcover is written the date Oct 16, 43.
2. The orginal front panel color was green
3. It was designed to be rack mounted and use an external power supply via a 6-pin Jones type connector on the back. The only other connector on the back was a SO-239 antenna connector.
4. It tunes over the range of 100 MC to 158 MC with numbering from 100 to 155 in 5 MC increments
5. It has a big black brass tuning knob on the left hand side with tuning dial above it.
6. I addition to the Tuning knob there are five other knobs, three are along the bottom in a row and two are in a row directly above the two leftmost bottom controls. The bottom controls are labled as follows from left to right
a. "RF Gain" Pot.
b. 3 Pos. AVC Switch labled "CW and Manual"; "Manual"; "AVC"
c. "Audio Gain" Pot.
The upper row on controls consist of a 3 position switch that is unlabled on the left and on the right is a control I am sure is the BFO.
7. It uses 11 tubes, 6 Octal base tubes on the top of the chassis, 2 subminiature 7 pin tubes on each of 2 VHF tuning assemblies, and finally one very short "6H6" octal base tube under the chassis.
8. There are two phone jacks in the upper right hand of the chassis.
9. There is a tuning meter on the upper right hand side of the panel, it is approx 2" round, made by GE and the scale is marked 1-10 ma.
10. There is a front panel adjustment beside the RF gain control that is capped normally. It is a screwdriver adjustable pot. labeled "Threshold Sen sitivity".

That's about all I know. Any help in indentifying it and any source for manual/schematic would be appreciated. As always thanks in advance for any replies. The boatanchor community truely represents the best of the spirit of amatuer radio and the electronics hobbies.

Rob Dunn

Hi folks,

I have an RA1792 (non backlit model), ser; 10323 for sale or trade. The receiver is in fine working order, (guaranteed not to be D.O.A.) and everything works as it should. There are a couple of minor issues with the cosmetics however, firstly the LCD's are suffering from some "burn in" which does not affect every segment on the display. Replacements can be had (ï¿½50 Sterling each) and I can supply them to the purchaser / trader. Secondly, the front panel does have some scratches and rubs. They are nothing too major, just a result of use over a period of time. No dents or dings though!

I am looking for ï¿½550 Sterling, firm, plus packing and postage (at cost) if you want to buy it. If you want to trade then I am looking for offers of Hammarlund, Hallicrafters, Collins etc etc. What have you got? Please, no rubbish!!

Email me in the first instance.

3263. HELP! Newbie needs advice on Atlas 210X!

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-04-07 21:13:41 UTC
From: bomc <bomc@goodnet.com>
Message-ID: <3ACF8305.B63E1E6A@goodnet.com>
Source record: 54623

Hello all,
I am really having trouble getting this transmitter to work. The reciever is good, as far as I can tell, but I need some hand-holding on the
rest of it. This is my first radio and I want to get on the air! It was gracuously donated to me by Tom, WA9OXY, and I am grateful, but it would
be even better if I could thank him on the air! I appreciate any and all help possible.
Briefly, let me describe what I have already done and what I have. As I said, the Rx is fine. The cabinet is fine. I used to be able to get the
ammeter to jump to 4-5 A draw when I shouted (should be 9-10), now I can't get anything. I took out the boards and looked over them REALLY
carefully. Only found one trimcap that had a bad solder joint. I fixed that, but still nothing. Suspected the problem was in the mike, so
replaced that with one Tom said worked well with his. Still nothing. Where do I go? I have a partially working analog multimeter, a DMM, the
console unit, two microphones, a dummy load, a transmatch, a random length end fed zepp, and a limited budget. I am going to college next year
where they want $19,000 from my family each year, so I can't just buy another radio. You can understand, then, why I really appreciate your time
and help. 73 and hope to hear from you soon, Ross AC7JO

3264. WARNING: Beware of eBay !

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-04-07 22:43:26 UTC
From: W9STB / WPE9GHF <telegrapher@hotmail.com>
Message-ID: <iKMz6.14213$Kr1.1193385@newsread1.prod.itd.earthlink.net>
Source record: 54624

Over the past few months eBay has gone out of their way to come up with new ways to insult their users. Higher fees, silly restrictive policies, poor or non-existent follow-up on non-pays or bad sellers and increasing fees continually has made a once-enjoyable past-time aggravating. This week they announced their new PRIVACY POLICY. I suggest all users of eBay READ THIS CAREFULLY. I, for one, am getting sick to death of every entity around feeling they own the entitlement to know, use and share my private information. Gentlemen, eBay has taken looking up our kilts to the next level. If this stuff doesn't bother you, then "have at it."
I urge all eBay users to say "enough's enough" and let eBay spiral-dive into a burning heap like they are headed for anyway. At least we won't provide their bankruptcy court with money they have made from sharing "all identifiable user information" INCLUDING "credit information, e-mail addresses and telephone numbers."
There are plenty of other auction sites out there and I, for one, am having INFINITELY better luck selling and buying using non-eBay resources anyway.This week I picked up a nice SX-62 on another auction site for $75.

http://pages.ebay.com/help/community/png-user.html
http://pages.ebay.com/help/community/png-priv.html

It probably will do no good but I urge all eBay users to send a SNAIL MAIL (they don't read email most of the time) registering your disapproval and advising him that you are leaving eBay. Mail it to: President, eBay, Inc., 2145 Hamilton Avenue, San Jose, CA 95125.
Effective on May 21st, 2001 for new registering users, and is otherwise effective on May 15th, 2001 for all users registered prior to May 21st, 2001.

3265. Re: help needed with swan mobile supply

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-04-07 23:33:46 UTC
From: Bis Wichy <wd0hco@ev1.net>
Message-ID: <3acfa365_1@newsa.ev1.net>
Source record: 54625

Hello Fellow Swan'ner,

Nothing like a 270B or 350 mobile that's for sure!

OK to answer your question - that power supply draws 40 AMPS at 12 vdc (neg ground).

To make it work correctly, you need to hookup a jumper from terminal "A" and "B" and then through a 45 Amp slo-blo fuse to the + terminal of the battery. => - IF - you plan to hook it up directly to the battery. Problem wit this setup is that the 14-C is always - ON - even if the radio power switch is OFF.

The other method is to remove the jumper and hook terminal "B" to the cig lighter or other 12V terminal and hook up terminal "A" through a 45 Amp slo-blo fuse to the + terminal of the battery. Terminal "B" goes to pin #1 of the jones plug which goes to the power switch on the rig. From there it comes back to the jones plug through pin #4 to the relay coil and through the RCA 39804 snubber diode to ground.

Turning the switch - ON - will key the 14-C power relay and bring in juice to the power supply directly from the battery.

NOW YOU -------> M-U-S-T <----- use a #10 CABLE and 45 AMP slo-blo fuse from the 14-C Term "A" to the + batt terminal.

Using anything less could cause a fire when you tune up.

Ahhh bubba, voice of experience talking here. Last thing you want is a small fire next to a plastic fuel filter like the one they put into my chevy.

Them Chevies burn up reeeeal nice.
My 350 was one hot little radio (for awhile anyway)...

The 14-C draws 5.5 amps just for the heaters - add that to 3.5 amps for RX and 16 AMPS during "Normal" SSB. TUNEUP is 40 AMPS PEAK! So keep tune ups and "Hola's" short! 10 or 15 seconds MAX and no more!

I have schematics of both 117 and 14-C. I can scan & email if you need them.

Now that I have warned (scared) you ... go have fun and fire up a real radio.

73's

-Biz WDï¿½HCO-

Nine or ten amps on average voice peaks?! I think you might see that much current 'key down', but 10 amps seems to be very high for an average peak.

Did you have the radio connected to a resonant antenna or dummy load while you were transmitting with the mike?
If not, you have probably destroyed the final transistors. The transmitter must always be operated into a proper load.

Pete

Mark,
There should be a L shaped bracket attached to the input end of the filter. That bracket is screwed to the chassis from the bottom. The rear apron of the xmtr should have a square hole punched to accept the flange of the SO-239 on the output side of the filter. I just got my 5100 spiffed up and playing fairly well, despite B&W's design shortcomings.

NO $$** ng BIG BROTHER WATCHING AND MAKING FILES ON FOR ME !
You really read it like a sneaky record companies contract
anyway found this:
SNIP:
Q.
What if I do not agree with the change?
A. If you do not wish to accept the revised Privacy Policy once it is
effective (on May 15, 2001), you may cancel your eBay registration by
emailing decline@ebay.com. If you are selling any items at this time, you
may continue until their scheduled conclusion. However, you will not be able
to access any service or feature that requires you to enter a password once
your cancellation request is processed.

For starters this would be an excellent way to spread a virus to wipe a hard drive clean! So why trust you? anyone doing
illegal activity or at least dumb enough to store it on the Hard Drive instead of an encrypted CD deserves to get caught!
but the best thing to do is pop the cover and slam the HD with a hammer! thats that. I don't even keep the screws in the
back holding the mid-towers case since I am always upgrading CD-ROM's, Video Cards etc., as they get faster and cheaper! so
take this wasteful spam crap somewhere else, didn't you know pyro's are the most intelligent people on the face of the
earth?

PD

p.s. a self exploding device could easily be made by using whatever for the trigger and Boom, no more HD! just as fast as
the police can say, "Police we have a Warrant!"...If the information was of something of very classified importance like
what computer hackers get from our own defense department. other than that who really cares what porno sites can be traced,
my wife busted me many years ago before I learned how to clear the Documents folder which shows last pictures or Doc's
looked at! funny now but not then!

PD

Can you operate the rig in the CW mode? You may need a telegraph key to provide the contact closure. Being able to generate a CW signal would prove that the TX chain is operating (your mike may have an open cable). Testing the final transistors is best left to a professional.

3292. Help HW-104

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-04-08 20:25:27 UTC
From: Ron Oberloh <wa0kds@arrl.net>
Message-ID: <3AD0C937.43404BB8@arrl.net>
Source record: 54653

Hi fellow
Just bought a nice HW-104 but it is not working on 20 and 15 meters. Anyone out there have a manual that they would be willing to sell or can make a copy of the alignment section of the manual for me. I might be placing this in the wrong group being it is a solid state radio but it is 24 years old.

Thanks
Ron WA0KDS/7

Sounds all the world like a BC-639. It was the companion receiver to the BC-640 transmitter. It should be the standard 10 1/2" high rack panel (?) and have a couple of acorn tubes in it (e.g.: 955/956). It was also known as a BC-1421. I've had several BC-639's and the work pretty well for monitoring the aircraft band. Lots of room inside, too. I probably have the schematic somewhere around the shack, too Matter of fact, I just looked. I do have the book but its about as "light" as you can bet and still see it. Maybe it will copy? Any help? de Jeep/K3HVG

I was thinking it might be a 639 too - but it's been a LONG time since
I had one, back in the late 50's on 2 meter AM... Not much bandspread
on 2 meters, and poor sensitivity - an Ameco nuvistor preamp helped, but
internal noise on the 639 was the limiting factor...

I think I need to replace the final transistors in my HF rig. They are the two CTC CD2545 models. However, I cannot find these ANYWHERE. The
online lookup service said they are discontinued by a manufacturer without a web address. Doe ANYBODY know where I could get these or at least a
comproble substitute? Thanks!

From: FJose <eb5agv@ctv.es>
Message-ID: <3AD19810.C9AA7B49@ctv.es>
Source record: 54666

Hello BA-ers,

Due to damage in transit, I am in need of an HRO-5 (although I think most PW dial knobs will be fine) bakelite knob. It was sadly smashed on transit. PW dial has been removed (it was a hard work as it was seized due to the slipping movement it suffered with the lock screws put in), but I got it finally out. It seems undamaged. So I just need the bakelite knob. It does not need to be perfect.

Please, let me know if you can help. Thanks!

JOSE

I know that many folks hate eBay, but that might be a good place to look for your Metrotek CB gear. I see Metrotek sets listed on eBay fairly often. I collect and restore Raytheon, Apelco, and Webster CB gear. the majority of my collection has come from eBay auctions, and I have not had to pay high prices for any of it so far (and I WON'T, if it comes down to that; I don't need the stuff bad enough to over-pay).

73,
Dean, K5DH

I, too, would be happy to contribute to a site stocked with manuals from like-minded collectors. There's a few that sell manuals like these, but often of questionable quality and high prices. I think it's much more in the spirit of keeping old equipment working and useful to have a free site where we can share what we've got.

Source record: 54668

Gentlemen (and ladies): I am looking for information on communications equipment, procedures and protocols from the WW2 era. The hardware information isn't too difficult to find, but the procedures are a bit tougher. If anyone has any information, URLs, or book recommendations, I would very much appreciate hearing about them.

Please accept my apologies in advance for the spam-killer on the email address. I know it's a pain, but it sure works well. Thanks!

adam, most the services had manuals for procedures. the navy had
radioman manuals, these are filled with the procedures for operation of
the equipment. i presume the army had the same. where to find them these
days? i haven't a clue. i found some mid-60s navy manuals a few years
ago at a ham radio swap meet. but have not seen such a thing again.
good luck.

NTE has a substitute: http://www.nteinc.com/

Select Semiconductors under the Crossreference drop-down menu. The equivalent is NTE317.
Then select Online Ordering to see where you can buy them.
For example, Mouser Electronics sells them for $60. Good luck.

Hey Ya'll, I think that it would be a great idea to create an equipment manual archive site. I, myself, do not have the expertise to mount such a project, but would be willing to contribute funds and materials. I have many, many test equipment manuals that are only benefiting me, and could be of use to 100's, if not 1000's!
What do we do to get the ball rolling on this, and take it from the "talk" stage and put it into action? Thanks,73. Greg Gifford/KG4MMY

I have a Johnson Thunderbolt Amplifier for sale. Item was restored in 1984 and has basically sat since then but has gotten scratched up in storage. It is wired for 220v and has had a 220v cord hard wired into the amp. Origional manual is included. Amplifier has continious coverage from 3.5-30Mhz so it is perfect for WARC bands. Asking $575 + shipping or will consider trades.

> Looking for those two art deco chrome pieces that go on the cabinet sides.

Hope I'm not disappointing you, but they are thin aluminum, not chrome. I had a dream in which I repainted my SX-28's dark greenish/gray cabinet with a glossy midnight black and then put chrome plating on the trim strips. But when I woke up, I was not Marlon Brando in a motorcycle cap -- just another radio dork with an original recipe SX-28 :-)

Funny you should mention that, Phil. I was at the hardware store today looking in the aluminum screen door section and saw lots of different sizes of aluminum stripping. :)

Hello group -

If you have any Western Electric tubes around your shack that you aren't using, and wish to sell, please send me a description, perhaps I am interested.

I am a private tube collector/hobbyist/trader with great interest in receiving, transmitting and audio tubes.

Meanwhile, if there are any certain tubes you are in need of, feel free to write.

Thanks for reading ~!
Regards,
Joe Pratt

Hallicrafters model HT-37 AM/SSB/CW HF transmitter in good condition. All tubes check good. The 6146 finals and some of the caps were changed trcently and it's getting full output. The front panel is very good. No dents, dings, etc. - comes with a copy of the manual - the only problem to report is that it is working on USB but not LSB - $245 plus shipping from Schenectady, NY

If you go to a search engine like http://www.google.com and enter words like "BC-348" or ARC-5" you'll come up with an awful lot of listings. Some of them might lead you to where you will find the manuals you're looking for.

Only other thought I have, you might to to the web site of the Confederate Air Force. They have dozens of WWII vintage aircraft, filled with radio gear of that era. If you can contact the CAF, they might have info on radio protocals of that era.

3340. British RAF R1224A Comm's(tube)RX.(Scarce pre-war set)

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-04-10 13:13:21 UTC
From: "radio-exports.com" <info@radio-exports.com>
Message-ID: <td61jfbsilgb53@corp.supernews.co.uk>
Source record: 54500

For Sale, British Royal Air Force, Communications Receiver,Type R1224A,from the early 1930's.

Here in the UK, radio-exports.com have a very good example of the hard to find, vintage, R1224A (tube)Receiver.

These early HF communication receivers were used extensively by the British Royal Air Force during the early 1930's.
They are particularly attractive tube type receivers,which exude the charms of a by-gone age.
One of the very last communication receivers to be housed in a wooden cabinet with lift up lid,the receiver has a classic muirhead dial drive.
The receiver uses a 5 tube circuit.It is designed for battery or battery eliminator operation and operates from 120 volts B+(HT),and 2 volts for the heaters.The grid bias requirement, which can easily be provided by two small 1.5 cells,is -3 volts.
All original lettering remains on the front panel and the condition throughout is very good.There have been no modifications and all components are original.
The original calibration chart is still with the receiver,fixed as it should be,to the inside of the lid.
Coverage is 4.3Mc's to 21Mc's in 3 switched ranges.
This scarce and desirable, collectors early communications receiver, is in fine working order.The schematic for the set is included.
The price,which includes the cost of packing and of air freight to the USA is $580 US Dollars.

If you would like more information or wish to purchase,please contact Graham Leo info@radio-exports.com

Thank you for your interest.

I have one of these but mine uses 9001 type tubes for the RF section.

The IF is rather wide so it does a fair job on FM.

They were 500 ma. 600PIV diodes made by International Rectifier. Replaced a lot of seleniums in TVs with them in the 50s. Early ones in cartridge cases. Any good rectifier with those ratings will do. Probably one of the package bridges would be an even better choice.

Hello,
Name here is Joe (N3IBX) and I have a Hammarlund HX-50 transmitter
without the 160M option. Does anyone have any idea how I can modify it for that
band since I doubt I'll ever find a conversion kit for it. Any information will
be greatly appreciated.
Best Regards,
Joe Cro N3IBX

> Best Regards,
> Joe Cro N3IBX

I had an HX-50A back in the early 70's. I found the actual coils
(boxes of them!) at a local surplus shop in Charlotte that had
acquired a bunch of Hammarlund stuff when they closed the Mars
Hill, NC facility. Working solely off a 25-30 year old
recollection, there were 3 coils and a crystal that had to be
added. I don't recall if there was any change to the final output
network. They weren't the type of coil a regular guy would be
able to wind, but I'd bet that these days you could put something
together using toroids. Just find what freq the individual coils
are to operate at, maybe add a trimmer for adjusting, and go from
there. Must have been an oscillator, mixer and driver coil. The
freqs and the xtal freq should be in the manual.
It'll be a challenge, but I'm sure it could be done fairly easily
if you are handy with these things.

Source record: 54542

For Sale.R107 British (WWII) Communications Receiver (tube)

Here at radio-exports.com,based in the UK,we have just taken delivery of a really nice example of the vintage British Army receiver Type R107, from the second World War era.

These receivers were very well built, 9 tube sets,covering 1.2Mc's to 17.5 Mc's.They will
operate on American supplies, or European,(100-250 volts ac) or 12 volts dc.
This particular one is in extremely good, original condition,with original finish and lettering on
the front panel and all knobs and switches are present and correct.

Moreover,this R107 still has the protective case
front ,and,even more unusually,it still has the large scale receiver schematic,correctly fixed inside the lid.

The R107 receiver is impressive, for a number of good reasons.
Firstly, the "flight deck" array of front panel controls -no less than 14,plus various sockets,for antenna,headphones, etc.
Secondly,it is impressive by virtue of it's size and weight;
24" x 13" x 17.5" and almost 100lbs on the scales.

The one which we have for sale is in full working order.

A copy of the very comprehensive manual for the set is included.
This is a classic boatanchor if ever there was one!

The price for this most impressive WWII receiver,which includes the cost of packing and air freight to the USA,is $540 US Dollars.

If you require any additional information, or simply want to order,please contact Graham Leo info@radio-exports.com
Thank you for your interest and attention.

Wanted:
The following vintage CB radio equipment for my personal
collection. I prefer equipment that is cosmetically nice
and working or repairable.

RAYTHEON:
Tube-type: Raycom, Raycom II, TWR-9
Solid-state: TWR-11, TWR-11T, Raycom III, Raycom IV
Hand-held: TWR-8, MW-2, Regal Ray-Ette, Super Ray-Ette

APELCO:
Tube-type: AR-9, AR-10

WEBSTER BANDSPANNER:
Tube-type: Four-Eleven
Solid-state: 550
Hand-held: WT-2

Visit my Raytheon CB radio web site:
http://www.qsl.net/k5dh/raytheon.html

73,
Dean, K5DH

FS: I have some Collins catalogs FS as follows: Collins Amateur
Products catalog (shows complete S-line
in a console on front cover and each individual component described
on each succesive page thereafter
as well as all accessories), 1967, $25; Collins Amateur Products
catalog (shows round emblem KWM-2 on
cover as well as each component described on each successive page
thereafter as well as all
accessories on each page thereafter), 1969, $25; Collins Radio
general catalog (thicker because it not
only shows amateur products but it also shows and the avionics and
everything else too), 1959, $45; Art
Collins' famous book..."Fundamentals of Single Sideband", good
condition, $55. If interested call Mike,
(693-1461) eves and wknds or email to gspubl@tca.net

Source record: 54553

Scott,

The coils and capacitors form tuned circuits. Perhaps when you were rebuilding you upset this part of the circuit. You also could have broken wires in the coils, probably the input side. Check the coils for continuity and also check they form tuned circuits. You should get a peak at somewhere about 455 kHz using the transformers. If you get no peaks this is a symptom of something being wrong.

Linus,

It is called a gimmick capacitor. It is a very low value capacitor that is probably used to inject the BFO signal into the circuit.

There is a jumper you must disconnect to get the WARC bands to transmit. My TS130CV had one. Go to the Kenwood website and ask them how to identify it.

I have owned this SX-28 for about 1 month now. The s-meter, which was
unresponsive, is now showing signs of life. It still only goes as high as
s-8 on very strong signals but it seems to be getting better every day.
What's going on here? Are some caps reforming?
Thanks for any comments.

Actually, keying it in CW mode does precisely nothing. All the key has to do is close the switch, right? Also, what about replacing the
finalswith lower power transistors. Would i have to substantially modify the entire circuit or could I just replace the finals? If I do need to
have professional help, who do I turn to? Again, thank you all for your help!

Thanks Bruce-
This radio restoration project was finished weeks ago, but I do appreciate your reply even if it's late. I did end up replacing all the condensors, and the main problem turned out to be the multi-section electrolytic; I replaced it with seperate axial lead types. Also, the gimmick capacitor had me baffled for a second but others in the group quickly educated me on its function.
The '38 is really working beautifully now, and I've done a thorough cosmetic cleaning/restoration now, along with the electrical repairs... looks and sound great, and hopefully will do so for a long time to come. We are kind of like stewards of this old machinery for future generations as well as for our own immediate enjoyment.
I thank you for your comments and wish you all the best- keep playing radios!
:-)
Linus

FYI, I talked with the fellow in Virginia who does Rangers, Valiants, and HQ-180's panels and cabinets. He says that he "could" do Viking II's for $300+ for the set. Ho does not have any stock to work with (old cabinets and/or panels), so someone would have to be the beta site for him. I, too, have a very nice V-II that could be made factory new with some paint. Dee's website is as follows:
http://home.rica.net/soundmind/refinishing.htm
BTW: I have one of his Valiant I's and it is outstanding... de Jeep/K3HVG

Well, that link doesn't seem to work, directly, although that's what it is!
I did a search on "dee's marina". Dogpile shows "Patti and Dee's Marina", which is his site.... Maybe the direct link will work for some out there....

I am in need of Johnson Ranger panel & cab complete. Does not have to look good but no rust or holes in panel. Will trade $$ or tubes, boatanchor parts, etc.

Also need Valiant I panel & cab. Same deal.

What do you have?

73 es Dee

I had one of these when they were new and capacitors were a problem then.
I had to replace leaky "ceramic" bypass and coupling caps in the SR-160 as
well as in the HT-44 transmitter and SX-117 receiver. The HT-44 was
particularly bad and required replacing "all" of the ceramics in the driver
stage. When the coupling cap started getting leaky the finals started
acting really strange <:-))

3424. Searchable TV-7 settings doc for Palm OS

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-04-12 18:33:20 UTC
From: Mark Rehorst <rehorstmark@netscape.net>
Message-ID: <u4tbdt0oc303qnnuqefqr92us7lutp3oqa@4ax.com>
Source record: 54584

I've done it!

I converted the TV-7 tube tester settings file to a .prc document file readable, and more importantly, searchable, by Isilo and other Palm OS document readers.

You open the file with Isilo, then enter the tube number to search for and it takes you right the settings for that tube. No more flipping back and forth through the manual, no more trying to figure out if an 80 is at the beginning of the manual or the back. Isilo will find it for you. My Handspring Visor Deluxe can search the entire database in under 2 seconds.

Here's what you do-

1) go to the Redneck Boat Anchor page (http://www.acadiacom.net/nlee/tv-7_index.html) and download the Excel spreadsheet. Don't worry- though the Excel file is large, the PDA version of the file will only use 63kB of your PDA's memory.

2) open the Excel file to the "US Settings" page. Insert a column before the tube type column. Format that column for text. Fill the column with periods (.), one per cell. Select and copy all the relevant tube number and settings data including column A which is full of periods.

3) Paste that stuff into an MS Word file. Replace all ".-tab" (entered as .^t) with "."(period). Replace all "^t" (tabs) with " " (space). Replace all "See Note>" with "N". Replace all "See Note >" with "N". Add a line or two to the top of the file listing the order that the data is presented, and indicate that "N" in the settings means "see note". Save the file as unformatted unicode text.

4) Use MakeDocW to convert the file to .prc format. Use "none" for both CR/LF removal and CR/LF translation. Save the file as "TV-7 Settings" or some similar name.

6) Sync your PDA and install the file.

7) Open Isilo and you should see the file listed. Open the file and you're ready to go.

It sounds a little complicated but the whole procedure can be done in less than 5 minutes.

The periods are added to the beginning of the tube numbers to distinguish them from switch settings values. For example, if you search for "80" you'll get every instance where the switch settings

contains "80". By entering ".80" you will get the type 80 rectifier tube.

If you want, you can perform similar conversions on the operating instructions, the GM chart, and the VT chart pages.

Do not send email to Nolan Lee about this procedure. He doesn't want anything to do with supporting it in any format that is not already on his web page. Do not ask me for a copy of the .prc file as Nolan Lee is retaining the copyright. You'll have to download the spreadsheet and do the conversion yourself.

I can't answer any of these questions. You haven't proven where the failure lies, and it would be foolish to randomly change out parts that may be good. A tech. could determine if the finals are showing any gain by measuring the quiescent collector current. You cannot haphazardly replace the finals "with lower power transistors" since there are critical drive, biasing, matching and other issues that cannot be simply addressed in this sort of forum. You're best solution is having the factory ascertain the problems, and quote repairs.

Peter

Was the radio recapped, or are you running it with the original wax capacitors still in place? Chances the heat during operation is slowly driving moisture from the caps. Leaky caps in the AVC system will cause what you are seeing. Leaky coupling caps to your audio tubes may surprise you with damaged output tubes, a blown rectifier and perhaps a smoked power supply.

Hello all,

Looking for the main power transformer for a Tempo 2020
HF rig I want to bring back to life. I thought I had a good one,
but alas - it's shorted and no good, so back to the drawing
board!

Email with any offers.

Dave WB7AWK

3434. Where can I get FT-243 crystals made?

Newsgroup: rec.radio.amateur.boatanchors

FS: Johnson Viking Matchbox (HF Antenna Tuner), covers 80 through
10-Meter bands. This is the smaller 275 W Matchbox (not the big KW one).
It has coaxial inputs/outputs, and has the (optional) internal antenna
relay to switch between transmitter and receiver. All original knobs,
some scratches as usual for gear this old, jpg picture available on
request. $75 plus shipping.

For sale:

Vintage (late 1950's I believe) REMCO Radiocraft
model 106 Crystal Radio kit in original box. It HAS
been assembled, but all the parts and pieces are totally
there. Includes unused roll of antenna wire, hi-z headset,
original instruction manual, antenna and ground plugs
with lead-in wires, and original box. Even still has the
inspection tag. Very nice condition, looks neat and has
that 'scientific' look of such kits of the era.

See it at:

http://www.greatsurplus.com/radio_gear.html

Price is $75 plus shipping via US Priority Mail.
Payment via Paypal or prepaid via Money Order.

Thanks for the look!

Great Surplus!

I have a Gonset Commander 50s to early 60s mobile transmitter. It goes all bands with plug in coils through a little front door. Very neat arrangement Its AM/ CW about 40 watts and I have paperwork for it. I also have several band coils. Its in very decent shape. Its fairly small as well. It does require external power supply.

I also have a Transcon 10 10 meter small am/cw transmitter and converter combo. It also looks quite good and I have paper work on it too. It was for mobile use and converter works with the bc radio. Ive only seen 2 in 40 years and the first one I owned too in the 60s.
Id like $150 for either unit + shipping thanks-73s Lew K1NDV

Mark:

That might be the biggest problem. Unlike most of the old BA radio manufacturers, who have graciously gone out of business, the classic BA test equipment manufacturers have largely survived.

Another problem is that even 25-year old commercial manuals were often over a hundred pages. My initial thoughts were to restrict an archive to a schematic only, since archiving whole manuals would really take up a lot of space. The site wouldn't then be taking the bottle from the mouths of companies and vendors who sell complete manuals. Would the archiving of 1% of a manual be akin to quoting a few paragraphs of a book in a review?

Searching the circuit diagram for Philips(?) CR101 receiver,
and also curious if circuit diagram for the BX925A receiver is
available somewhere, believe we had the last mentioned RX staying in
an army radio room when I was telegraphy operator. Fred Ostermann says
it is extremely scarce, so I have at least seen it, but unfortunately
all such secret equipment must be destroyed after being in within NATO

Bill,

I've used both. Personally I'd like to think that the newer units, is the brown ones, are better, but be sure they have the voltage rating to handle your application. The older ones, it seems to me, are more likely to have tarnish on their plates.

Brian,

If the pot has an opening, and many do, around the terminals, just apply a small shot of DeOxit to the opening and work the pot through its full range for a bit. Most of your problems should clear up. You might have to revisit the pot several times over the period of several weeks to get it all.

This was the crystal radio kit that got me into ham radio. I bought it at the corner toy store for $5 in 1957, and the station I heard most was K2TTK, who lived across the street, and operated 20 meter AM with a husky amp and 3 element mono-band beam. I guess a 15-to-1 increase in price isn't too ridiculous, but be cautioned that the inductor (which is also used for tuning) has a brass ball that moves across the magnet wire surface. Once the insulation gets too abraded, the coil becomes a great big short and the radio stops working.

73,

Rob

Like you, a Remco crystal set was my intro to ham radio. A ham across the street operated around 200 watts on 40 meter AM, and he came through loud and clear. My set had a 1 transistor audio stage that ran on a "D" battery. I have one like it now on my "nostalgia shelf"; I paid over $100 for it in very nice condition in its original box.

Mine, however, has a loopstick tuner. The tuning knob slides the slug in and out of the loopstick, so no worry about worn insulation. Technology marches on!

I will offer this never before sold amp, built by our engineering department in the mid 70's. The amp uses a pair of 3-500Z triodes, not included. Had it on the bay, and no takers. It is the only existing one on the planet! Will let it go for $450.00 and shipping. Built as an almost duplicate of the SB-220 Heath amp. You can even get any replacement parts through Harbach...
E-mail for picture if interested.
Thanks

WRT TEK manuals,I would include the circuit descriptions,as they are
invaluable in learning how some of the more complex items worked.Especially
if you're trying to figure out the time base switching in delayed or
intensified modes,or a 485 switching PS.

Hi all,

70 tickets of maximum 150 have been sold so far, so you still have a chance to get yours! For more info about the raffle of the Drake TR-44B, how to get your ticket and the drawing etc. take a look at http://home.online.no/~sindtorp/raffleTR44B.htm

At this site you will also get updated info about the program for the "3865 Drake and Antique Tube Forum" at the Dayton Hamvention 2001. So take a look!!

NEW: The Dayton Hamvention "3865 Drake and Antique Tube Forum" is going to be very, very special this year:
Through the efforts of Mike Elliott, designer of the TR-7 and the TR-5, the forum will be the site of a reunion of former Drake employees.

3488. Tektronix R647A, 11B2 and 10A2 oscilloscope system

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-04-14 03:02:35 UTC
From: novatech@eskimo.com
Message-ID: <9b8ekb$i9q$1@eskinews.eskimo.com>
Source record: 54398

I have a Tektronix Rackmount model R647A 100MHz oscilloscope with the 10a2 dual trace vertical and the 11b2 delaying time base that I want to clear off the workbench.

I haven't turned it on in years because it has a subtle problem in the HV. After about 1/2 to 1 hour, the HV fuse pops. DUring the operating time all the functions worked, but this is a "project" for someone who wants to restore it.

Here's the deal-- it is really heavy, which would require a box to ship the main frame (about 50 pounds) and another for the two plugins (maybe 20 pounds total)-- interested in it for the cost of packing and shipping?

If you seriously think you want this, send me email. Obviously, I would like it to go to a good home. This was my first Tek scope with a John Addis vertical amplifier and I spent many hours studying the circuits.

Thanks,

Steve.

I remember as a kid in the 60's that many of the old texts sent me
in search of a galena crystal (and a safety pin as a
cats-whisker). A 1N34 always worked better. Nowadays you can
find the rocks on ebay or wherever, but a 1N34 still works better.

Source record: 54405

The company was Philmore. They made crystal sets and parts well past the 50s. Thousands of Philmore crystal sets and detectors still show up on eBay and at radio shows. The detector you've probably seen resembles a semi-fixed galena detector with a catswhisker. The detector was enclosed using a glass dome that resembles the bottom half of a glass test tube. You had to remove the dome to fiddle with the catswhisker setting. Many of the early domes are now missing, but replicas are sold by Antique Electronic Supply and others (I just know someone would email asking!)

Hello,
I have a Central Electronics 20A TX and need some advice with it. I have the manual for it but it doesn't list anything about the tx keying circut for phone ops. Is this tx PTT? If so, does anyone have the microphone wiring diagram? Their is only a two pin connector in the front so I have to assume the rig is not PTT.
Any advice will be greatly appreciated.

Message-ID: <3AD8CDF0.9FC1FD86@mediaone.net>
Source record: 54417

Hi Joe

The 20A is vox only. No ptt. For manual operation you switched the function switch to manual or to vox. You can add ptt by connecting it to the key jack and leaving the function switch in manual. Then you will have ptt only or vox only depending on where you set the function switch. This works the same as it does for cw. On cw they key the relay from the key jack.

Some guys would wire the key to the bias line on the terminal strip on the back for cw so that the relay could be kept closed and did not clank in and out as you key.

The original mike jack should be a single button type. Only one contact in the middle. Latter 20As had a spring loaded jack that would short to ground when the mike was removed. The spring kept tension on the mike plug so that it did not work itself loose as often happened with the standard mike jack.

Put a D104 mike on it and use it with the vox ! It works great.

It sounds to me as though your complaint is about the S-meter rather
than the receiver! Set the gain for a tolerable audio noise level with
NO antenna, and then connect the antenna. If the noise level comes up,
the receiver is probably OK. I suggest this because you gave no
indication that the receiver is really deaf. Good luck and 73,
Allan, W1AEL

Of course it's real. But notice that, with the $500 start figure, there have been zero bids? The market is speaking to the seller.

If you sell something for your initial asking price, then you likely started out too low. If nobody bids at your minimum, then you started out too high.

OTOH, there are other bugs, going for $200, with multiple bidders.

This year, bugs have sold for $461, $299, $293, and as low as $26. This market has an 18:1 span!

>This must be either a real antique or a rip off :)

It looks like a very poorly treated bug. What do you call antique? If I let one of mine go to hell as that one has, it would look the same. I bought my last one in the early 60s. Normally it is bright chrome with a goldish "Vibroplex" plaque. Mine came with black and with red paddles.

It appears to me to be just another EBay rip-off artist's attempt do do his deed. Junk is junk.

Semiautomatic Telegraph Sending Machine US Patent 1,445,226

Martin's patents can be viewed by going to USPTO search site:
http://164.195.100.11/netahtml/srchnum.htm
Check out the diagrams, you may have to first load the Alterna TIFF viewer, see:
http://www.uspto.gov/patft/images.htm

The latest patent 1,445,226 on this eBay sale was issued on Feb. 13, 1923. I'll read it more carefully later but, it seems to be claiming the details of the mechanical structure of the key, particularly the design of the U shaped contact spring and the main lever and bearings.

The latest patent on the earlier key, 767,303 issued on August 9, 1904. It seems to claim the very basic principles of the invention, the periodic motion of the elements of the key but, not so much the specific structure of the apparatus.

> BC458 VFO. Larry WA2PZI

There is NO "VOX unit" in the CE 20-A, it comes standard with vox
operation built in - the only optional "unit" is a plugin anti-trip unit
(QT1) to reduce or eliminate the receiver speaker from tripping the
VOX...

From: Bill Ogden <wogden@attglobal.net>
Message-ID: <3ad9d593_3@news1.prserv.net>
Source record: 54306

My R390A just died. The thing is such a monster, physically, that I do not know quite where to start. I have tested all the tubes and they seem OK. I have audio (hiss, with a little more hum than usual, responding to both AF and RF controls), but no other function. Absolutely nothing from tuning. The BFO introduces absolutely nothing into the hum. The filters are still doing something, because the hiss narrows with the filters. Unfortunately, the crystal calibrator was not working when I got it, so I cannot use this for diagnosis.

I have a manual, but it is almost as much of a monster as the unit. Any suggestions where to start?

I used it about a week ago, and everything was working normally. Turned it on last night and it was dead. There were no external changes that would account for the problem.

Thanks

Bill Ogden

Ah, the improvement in the later Vibroplex is the part that supports the main lever ... he calls it a U shaped yoke and it supports the lever on the shaft that tapers at the top and bottom into the bearings. He didn't claim the U shaped contact in the later patent, that was the same as before (and there were several intermediate patents).

agree ... the condition looks pretty marginal and the price high, it was just fun to try to date them.

Hello all,
I have got a meter from an Admiralty portable output meter
PATT A5756 1960 serial N°18 forsale
It is in very good condition for its 40 years of age.
The meter has a paper facia with a 1 volt RMS maker at 50%
scale (I do not know the FSD or current rating of the coil)
The face is approx 3.25 inch (83 mm) dia and is housed in a
flanged black painted carrier, the flange is 4.25 inch (108 mm)
diameter and requires a cut out 3.57 inch (90.5 mm)

On the back of the meter is an earthing terminal (for screening
the case) and two terminal that are connected to the movement
one has a "+" marked next to it
The number 46610 is marked below the terminal and this has
been protected with varnish to prevent it coming off.
Also a label with "U.K. Pat. NO. 758363" is attached.

Anyone interested ?
I am looking for £5 + P&P but make me an offer !!

Martin G1GYC

Hi,

I have a Trio 9R59D receiver in excellent cosmetic and working condition. I am considering selling this unit, but have no real idea of the value. I just saw one go for $125US on EBAY, and it was missing some knobs, and wasn't tested for performance. Can anyone help to place a value on this receiver? I'm not much for EBAY, and would prefer a private sale, but will do EBAY if need be. Thanks for any help.

Chris VE6RDC

PS - Anyone out there have the matching SP-5D speaker?

3560. FS: APS-104 Radar modulator unit

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-04-15 20:54:35 UTC
From: worley@snowhill.com
Message-ID: <3ADA0A4A.1F2DC104@snowhill.com>

Cross-posted to: misc.industry.electronics.marketplace,rec.radio.amateur.boatanchors

I have a mil surplus modulator unit from APS-104 search radar (likely from B-52 bomber - 1960s vintage). Was used to fire a large pulse magnetron (in another unit). Contains a 4C35 thyratron, four 3B29 HV rectifiers and a few smaller tubes, oil caps, relays, transformers and other parts all in airtight aluminum canister. Also have copy of service manual (extra $5 for all, n/c for just the basic schematic & info). Still in original box, but used, collector's item, $55 (prefer pick up - box exceeds UPS size limit).(For an additional $20, I can shave down the foam insert and modify the box for UPS shipping, just takes a lot of time & effort to do this, and will cost at least another $40 to $60 to ship 105 lbs.) Great collector or experimental item. Located in southeast Alabama, 36330 zip. Email or call 334-347-5281 day/eve.

3561. Re: R-390A just died. Help!

It's a long shot, but you might check the interconnecting cables from the RF to the IF unit. Since you do hear changes to the audio with different bandwidth settings, it sounds like you could be losing the signal completely from the RF module.

BTW, the manul, albeit a monster, does give very good troubleshooting/alignment procedures.

Yep I thought as much :) However it was worth the post just to see your reply. The Patent Office Info was a real gem and one I will find useful in future. My thanks Joe for a very intersting angle on the whole thing. I'm off to peruse the PTO hehehe I ahve already installed the plugin.

Thanks again

Panzer

Betchya a dime you have a dead 3TF7 ballast tube (RT511 on the schematic, IIRC). This is on the IF deck, right hand side close to the front panel. This tube is just a bunch of filaments that regulate the filament current for the 6BA6 BFO tube and (most importantly) the 6BA6 tube in the PTO (aka VFO) in the bottom of the radio.

Quick check: look at the 6BA6 BFO tube and/or the tube in the VFO (you gotta turn the radio upside down for this) and see if they're lit. If not, the 3TF7 is bad.

This is a common enough problem that there are many work arounds. One, you can buy a new 3TF7 from Fair Radio for about 20 bucks. But it's just gonna die again, and it really adds minimal advantage (the radio was designed for crappy commercial or generator power, but with good quality power we have nowadays it doesn't do much to increase the radio's stability).

Second, you can replace the BFO and VFO tubes with 12BA6s (they're cheap) and short together the active pins in the 3TF7 - just a jumper wire stuck into the socket will do. I forget offhand which pins they are, and you don't wanna go blindly shorting pins together because I think they used some of the other terminals on the socket as tie points. Look at the schematic for the pin numbers where the filament voltages are.

Last, Electric Radio published a real JS mod with some sand-state regulator and rectumfrier combination. Looked pretty bad since you had to mount stuff on a mambo-jambo heatsink. But apparently it was very effective.

Good luck and let us know how it turns out. 73 John

It is merely a very late model Double Lever Vibroplex. Fair condition. He, the seller, is putting a lot of stock in the value based on the value of earlier models, which can command the asking price and then some. That one in ebay is boring.

RE: "Wanted: Hallicrafters HT-9...."

Be sure to set aside a ton of money for freight charges. I owned on of those in the mid 50's; It is heavy. Nice rig though, with great audio. I had mine while living in Ketchikan Alaska. I received my only "bad boy" letter from the FCC monitoring station in Pt. Reyes, Ca. My 2nd harmonic got there RST 579.

Don

Looking to buy the knob used on the "Sensitivity" control (same one also used on "Volume" control) of Hallicrafters SX-62. Knob is somewhat similar to the Radio Shack cheapie sold in the seventies...black shaft, chrome skirt and numbered 0 to 10....only slightly larger.

Will consider buying all knobs or your entire parts SX-62 if you prefer.

Ditto,
If there is more than one HT-9 or HT-1 out there I would
also be interested to go along with my SX-17. I would trade even
a S-36 and a S-36A(BC-787) if you are interested. Of course this
would be the scraps after Joe finds what he is looking for.

OK this might sounds very simplistic and obvious but did you check
the fuse?? This did happen to me one time and I was going to start
to diagnose and then I checked the fuse and well i'm sure you can
guess.

Source record: 54265

For Sale Racal RA1772 HF Receiver

Here in the UK,radio-exports.com have for sale an extremely fine example of this high grade,commercial, Racal HF Receiver.

Frequency coverage of the receiver is 15kHz to 30 MHz.
It is continuously tunable, in either:-
10Hz steps (Standard Tune) or,
100Hz steps (Fast Tune).

Coverage is in switched bands,1MHz wide,(with overspill of 20kHz at each end).
Standard filters are fitted for .3,1.2,3.0 & 13kHz bandwidths).

A switched panel meter indicates: r.f.out,l.s.b.,u.s.b.,various voltage tests
within the set,and f.s.k.,output.

Condition of this particular receiver is extremely good.
The front panel is unmarked.All switches and controls are original,correct for this particular Racal model, and unchipped.

The receiver has been tested and is in full working order.

The set is designed for mounting in a standard 19" rack.

The price of this superb receiver is a very competative $1140 US Dollars.
Please note that this price includes the cost of packing and also of Air Freight to the USA.

If you would like more information or wish to order,please contact:

Graham Leo info@radio-exports.com

Thank you for your interest.

3619. SX-28 Tube Voltage Charts

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-04-18 02:17:39 UTC
From: Brian Denley <bdenley@mediaone.net>
Message-ID: <7P6D6.2541$nO2.4935466@typhoon.ne.mediaone.net>
Source record: 54224

While restoring an SX-28, I have aquired the Army maintenance manual
(SX-28A) and the Hallicrafters manual for the SX-28 itself. The Army manual
has much more information including a chart listing the resistances to
ground from each tube socket pin. Both manuals give operating voltage
charts at each tube pin BUT the voltages listed don't even resemble each
other. I was under the impression that these two receivers are virtually
identical. Should the listed voltages be that different between the SX-28
and 28A?
Thanks for any info.

Well here is the APRIL TRW Swapmeet list of sales items.....

TRW Swap meet will meet on SATURDAY April 28, 2001 at 7:00 - 11:00 AM
at TRW
parking lot on the corner of Aviation Blvd. & Marine Blvd. in the town
of
Redondo Beach.

DIRECTIONS..... Exit on Rosecrans Blvd off the (405) San Diego
Freeway.
GO West 3 signals to Aviation TURN LEFT, you are now going south. Go
two
signal lights to Marine TURN LEFT, and then turn RIGHT immmediately
into the
parking lot.

MY SPOT at TRW Swapmeet is E-1 (its a corner spot)

Lots, & Lots, & Lots of GOODIES "4 SALE"

1. COLLINS 51S-1 "BIG Round Emblem" Receiver. It looks and works
great. It
is in a Collins 30L-1 case, and its in nice condition. The case has
been
repainted (with Collins color) , also looks great. New power cable
included, the radio was aligned by my Collins technican Wayne Spring
W6IRD.
$1600.00

2. Collins 651S-1 Receiver "Round Emblem" works and looks fine, it
has a
liitle bit of wear. Original Collins manual included
(its 3 inches thick!!!) also checked out by Wayne Spring
W6IRD...$1300.00

3. Collins 75S-1 receiver, and Collins 32S-1 transmitter (matching
set),
with instruction manuals, NO power supply, also checked out by Wayne
Spring
W6IRD.....$800.00

4. Yaesu FT-101E transceiver, Yaesu FV-101B external VFO, both items
in
"nice" condition, and operational
(comes with both manuals, and Yaesu hand microhphone)
.....$295.00

5. Heathkit SB-221 Amplifier 10-80 meters in very good condition.
Wired for
110 volts, and putting out about 950 watts with 90
watts of drive.....$525.00 (comes with manual)

6. Icom IC 701 HF transceiver, and matching Icom PS-701 power supply,
also
nice condition.....$285.00

7. Drake R-4A receiver $150.00

8. Drake MS-4 speaker $50.00

9. Drake SW-4A Receiver, with Drake AL-4 antenna $195.00

10. EICO tube tester $85.00

11. Ameco PLF-2 preamplifier $30.00

12. MFJ-941C tuner $40.00

13. Knight C-577 compressor/preamp $15.00

14. Swan SWR-3 swr/meter $5.00

15. Icom 756 HF transceiver, excellent condition TWO SSB filters, and
original box, manual, microphone...$1195.00

Thanks for looking at my Sales Goodies......

73,

Leo Fahmie KJ6HI

Mike

Is your R7 a A or just the R7. I have been looking for one. I think the
only differents is that the A has a noise blanker built in.

3623. Load Z for given Zo, dB and meaured input Z

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-04-18 03:45:10 UTC
From: Reg Edwards <g4fgq.regp@btinternet.com>
Message-ID: <9bj2fl$722$1@uranium.btinternet.com>
Source record: 54282

NOW AVAILABLE.

Updated version of PROGRAM "ZL-ZIN.exe"

Coaxial and Balanced-pair Transmission Line Calculations.

This program computes the value of the load or terminating
impedance which
must exist at the end of a transmission line of given Zo and
attenuation for
a measured line input impedance. It is tailored specially to
calculate the
feedpoint impedance of an inaccessible radio antenna from input
impedance
measurements at the readily-available transmitter end of the
feedline.

Another application is the precise design of transmission line
impedance
matching transformers.

It can also be used to correct errors perhaps due to unavoidably
long test
leads when measuring radio components at HF.

As the transmission line becomes longer it is necessary to know its
characteristics more accurately. Simple means of estimating line
characteristics are described in the notes.

This is an updated version of a program of the same name issued in
1999.
There are some minor changes in the accompanying operating notes
and a
facility to sweep measured input reactance in small increments from
the
keyboard has been added. Mathematical operations and computed
results
remain unchanged.

It is suggested you download this new version and if you already
have the
earlier issue overwrite it with this one dated 15th April 2001.

Download ZL_ZIN in a few seconds. Only 52 Kbytes. Not zipped up.
Run immediately.

NOTE! Please email me first to be sure I have antennas still available. I can also provide a 10 ft. jumper with BNC connectors at each end for $6.00 extra for a total of $61.00. Thanks!

"A reference from one of my many customers"!! 18 sold to date, No returns!
(Thanks Robert, I received the antenna, it was as I expected and works great with my Garmin GPS-III+. Don't hesitate to use me as a reference.
73 de AC7KE)
I have for sale, once again, a bunch of these real neat GPS antennas. I had 12 units that sold out in a few weeks last year. Please check out the 3 pictures for full information. Some have red gaskets, some have white and some have black gaskets. This gasket seals the antenna when you drill the hole for securing it. No difference but in case you purchase one the color of the gasket might vary plus when they are installed you don't see it anyway. They all have white tops. 2.75 inch wide X .75 inch thick. Antenna requires 5 volts DC and receives its power form the GPS unit like the Garmin GPS-1, GPSII+, GPS III plus etc.
units that provide power up
to the antenna. $55.00 includes FREE USPS Priority mail shipping in the USA only. Payment via PayPal or USPS Money Order or Western Union money orders.
Money orders and will ship in a few days, if you do send a personal checks I will ship when it clears
the bank. All units have been tested and are working. Have about half a dozen to dispose of. If interested, send me an email! Thanks for your interest!

Message-ID: <tdqkckih1idvb8@corp.supernews.co.uk>
Source record: 54285

For Sale C12 HF Transceiver

The C12 transceiver,was developed by the British after WWII, as a replacement for the earlier W.S.19 transceiver.
It is basically an improved version of the W.S.19 (and is interchangeable with the 19 Set,in most situations).
It is similar to the WS19 in size,but is of much smarter appearance and much better quality.
Overall,the C12 has a better performance than the W.S.19 and the interior of the set is of superior construction.

The C12 consists of an AM and CW, sender/receiver.

The set may be pre-tuned to any of two alternative frequencies and switched instaneously from one to the other,without re-tuning.
To provide this facility,all tuning controls are duplicated,aerial tuning included, and a single switch is used to transfer the tuning from one set of controls to the other.
The Sender and receiver are tuned automatically to the same frequency.
The overall frequency coverage is 1.6 -10.0 Mc's.

The example which we have for sale at radio-exports.com,is a particularly nice one,in all original condition.

Included with the set,are the following:-
the correct original power supply, designed to operate from 24volts dc (@ a max of 9amps on voice-send),
the original interconnecting cable and plugs linking the psu to transceiver,
the harness for the set,comprised of interconnecting cables,junction box,headphones and microphone.

This set is in excellent condition externally and the inside is in untouched, mint condition.The harness,is as new.

To make life easier for anyone not used to operating these sets,a copy of the User Handbook will be included with the set.

The price for this excellent transceiver,which includes the cost of packing and of air freight to the USA, is only $495 US Dollars.

If you would like to order,or would like more information,please contact

Graham Leo info@radio-exports.com

Thank you for your interest.

FS: I have some Collins & Johnson items left from an estate to sell.
The following items are in very clean,
checked, and in functional condition. Wattmeter, 302C-3, $285;
Station microphone, SM-3 (long narrow
one), $285; 500hz CW filter, plug-in type for late S-line, $275.
There is also a Johnson Viking 122 VFO
with manual, unchecked (have no way to check it), appears original
and clean, $125. There is also a
Collins 75A-2 receiver and a 75S-1 receiver left that I just
cleaned the dust off (no one wants dusty
dirty stuff) and am checking them out to verify operation and I
should have ready in the next couple of
weeks. Both are cleaning up very nicely. If interested in any of
this stuff call Mike at (979) 693-1461
eves and weekends or email to gspubl@tca.net/.....

Kenwood TS-820S, CW filter, Digital display, & External VFO
$325 Plus shipping and packing. Copy of owners manual and
original service manual included.

Kenwood R-599A/T-599A Twins. No converters.
Includes owners manuals & Turner M+2/U hand mic.
$300 Plus shipping and packing.

Both radios in good condition. I can't and won't say "mint", they aren't
Besides - "mint" means to me "sealed" as in "mint coin sets"

Both transmit and receive very well, full output on all bands (per manual
specifications). Neither has an external speaker.

Will trade for Boatanchors - specifically AM.
Mohawk or Apache - perhaps deal for both?

Please respond to address below.

From: la8ak@online.no
Message-ID: <3ade0591.1231224380@news.online.no>
Source record: 54345

Searching the circuit diagram for Philips CR101 receiver, CR-101 has the following valves: EF8, EF9, ECH3, EBF2 (4), EM4, AZ1, 1918 (2), 1320 (2), 150C1, IF=760kHz. Coverage 1.5-30MHz.

also curious if circuit diagram for another item - the BX925A receiver is available somewhere, believe we had the last mentioned RX staying in an army radio room when I was telegraphy operator. Fred Ostermann says it is extremely scarce, so I have at least seen it, but unfortunately all such secret equipment must be destroyed after being in within NATO

From: Bill Ogden <wogden@attglobal.net>
Message-ID: <3ade2537_2@news1.prserv.net>
Source record: 54347

This is a great group. I had many suggestions, and about half of them pointed to the ballast tube. That was it. The tube is dead (open circuit).

My solutions are to find another ballast (3TF7), use two 12BA6s (instead of the 6BA6s) and short the ballast pins, or use another tube with the same filament pins as the 3TF7 as a current control. I'll look around for another 3TF7, although I remember they were in short supply 40 years ago; I'll probably go with two 12BA6s.

Again, thank you all.

From: doran platt <doran.platt@noaa.gov>
Message-ID: <3ADECC5B.77680FE9@noaa.gov>
Source record: 54360

I've got a 75A4 that has ac hum. I've scoped it out and it appears that there's about 5vpp of ripple at the junction of the first and second filter chokes. I replaced the 3-section 'lytic with absolutely no change in ripple. The ripple output from the second choke is not measureable (read: very low). Anyone out there had this problem. Normally filter cap change will do it, but not this time. This is a fully-recapped W3HM-. overhauled set, so all the mods and caps have been done, already.
Thanks for any advice.

Hi Yves....An old HC6-U crystal with an insulated base can be modified very easy to fit that plug. Carefully remove the cover and solder to the crystal holder supports. You can drill a hole in the cover and push your wires through and pot it up with a rubber sealer for a great looking plug or just use it pigtail fashion as is. jack k8xx

Take apart an old HC-6 crystal holder. They can be readily unsoldered and the cap removed and gutted. The header pins are a bit close to the base, but solder the a.c. wires on the "inside" of each pin and use some shrink tubing and possibly some epoxy for insulation and mechanical strength. You may find it a help to add some solder (tin) the plug pins (add some diameter to them) inasmuch as the old crystal sockets Johnson used tend to loosten up. Works fine here!! 73

That's a good idea for the L4B, etc. , but the Johnson equipment used an HC-6
type crystal socket, not FT-243 or twin-lead types.

Message-ID: <tdu4hjjabha763@corp.supernews.co.uk>
Source record: 54371

For Sale
RACAL MA350 HF SYNTHESISER
This increasingly scarce item of Racal equipment,is designed to provide superb frequency stability,when used with the Racal RA117 HF Receiver or the Racal MA79 HF Transmitter Driver.It is also capable of being coupled to both the Receiver and the Driver at the same time,when transceive operation is required.
The synthesiser is fully, transistorised.
The desired frequency is set in increments of 100kc's,10kc's,1kc's and 100c/s.
Further division is achieved by use of the interpolation control,calibrated in 100 divisions and which may be used on the 10kc's,1kc's and 100c/s settings.
A meter indicates the locking condition,in conjunction with an out -of- lock lamp.Output level is also indicated by the meter.
The synthesiser is designed to fit a standard 19" rack and is 8.75" high.Weight is 60lbs.
The synthesiser is in extremely good condition,and it has not been modified in any way.
It is in good working order.
Operation is from either 100-125 or 200-250 volts a.c.
If you have either an RA117 Receiver or a MA79 Driver,and wish to achieve the ultimate frequency stability from these units,(Racal quote 1 part in 10,000,000.0),then this MA350 Synthesiser is a must for you.
The price,which includes the cost of packing and of Air Freight to the USA,is $750 US Dollars.
If you would like more information or wish to order this unit,please contact:-
Graham Leo info@radio-exports.com
Thank you for your interest.

Have you checked the tubes for cathode-heater leakage? Easiest
method is substitution...in lieu of that, start scoping from the
AF amplifier on back toward the antenna.

Message-ID: <tdv1r4pq649ca5@corp.supernews.com>
Source record: 54385

Greetings, Some young folks I know are trying to move some old radio
equipment
for their grandmother. They have a double 4 foot rack cabinet full of
equipment that
includes an SP600 and several Northern Radio pieces including RTTY demod and
frequency standard. I believe loops supplies are also included. There is a
lot of stuff
including patch panels and so on. Both sides of the rack are full.
Anyone near central Kansas interested in a good looking SP600 and lots of
vintage
TTY stuff in a nice double rack cabinet please email me. I have a lot of pix
of this
stuff and some descriptions. I was hoping to get someone in the area
together with
these youngsters who would want to buy the whole rack from them. They know
the
rack and the SP600 have a value so it would not be free but suspect some
could
make out well who wanted this stuff. They have not found any manuals yet but
they
still have a lot to go through when they get time. Thanks for the read.
73, Mike K0AZ

Hi All,
I am parting out a Johnson Ranger I that I no longer need. The following is a list of parts. Most are dirty and need cleaning, but are all working, except where noted.

OPERATE Switch (SW4A & B) - wafers good
BAND Switch (SW3A & B) with L6B, Switch Block, and mounting hardware
FINAL CAPACITOR (C8A & B)
COUPLING CAPACITOR (C9)
MODULATION TRANSFORMER (T2)
HV CHOKE (LP1)
BUFFER CAPACITOR (C7)
AUX. COUPLING SWITCH w/ capacitors
METAL SHIELD PARTITION
COIL L6A
COIL L11B
VFO ASSEMBLY (C4,C5,C2,C3,C6 BAD) w/ coupler, tube deck (phenolic & VFO capacitor GOOD)
CHASSIS W/ SOCKETS & MISC. PARTS
R15 RESISTOR & MOUNTING HARDWARE
COIL L5
DRIVE POTENTIOMETER R13 (25K)
CRYSTAL SWITCH (SW2)
METER SWITCH (SW5)
MISC. HARDWARE, SPACERS, FEED THROUGHS, COILS

Most of these parts can be used on the Ranger I or Ranger II. Please email for prices/shipping info. Will sell separately or will sell whole lot for great price.

Thanks,
Jeff Weinberg W8CQ

From: "radio-exports.com" <info@radio-exports.com>
Message-ID: <te01am1qjcda4a@corp.supernews.co.uk>
Source record: 54390

For Sale.A41 Military TX/RX (U.K.Army 1960's)

Interesting boatanchors constantly arrive at radio-exports.com and the A41 Military Tx/Rx is one of the recent additions to our constantly changing stock.

This well built,compact and relatively lightweight set, dates from around 1960 and was designed for the British Army, for use as a Manpack/Groundstation set.It was mainly used by infantry units.

The WS No.41 is a vhf ,fm ,voice sender/receiver .It is continuously tunable over the range of 38Mc's to 55Mc's.,so the set has obvious potential for practical use on the amateur bands.

The sender/receiver is built into the upper section of a metal case.There is provision for batteries (not included) in the lower part of the case.The set is mounted on a back-packing frame ,complete with webbing straps.

To cater for both ground station and for use on the move,three antenna sockets are provided; short rod ,long rod and remote aerial feeder.

The set is very well equipped with accessories and includes the following. Earphone and microphone headset,telephone handset,signals satchel,antenna connecting cable,folding rod antenna ,flexible antenna adapter,matching unit,audio extension adapter,audio extension lead,artificial antenna and a copy of the Operator's Handbook.

The set and it's associated equipment are all in good original condition.

The price of this potentially very useable transmitter/receiver,which includes the cost of packing and air freight to the USA,is just $410 US Dollars.

If you would like more information or wish to order,please contact Graham Leo info@radio-exports.com

Thank you for your interest.

Lots of errors in that article. Its been pounded repeatedly on the amps reflector site. Visit www.contesting.com and review the amps reflector archives. W8JI pointed out some serious design flaws as well.

Bests,
Patrick

Hello,

I have some EL 37 valves in stock. They are all NOS and obviously made
by Mullard. Some of them are branded Haltron and some Mullard, but
they are identical so I am pretty sure that the Haltron are just
rebranded Mullards. After all, Haltron never made valves, just
rebranded and distributed.
US$ 113.- each or best offer. I can send a picture.
E-mail me if interested

Heathkit model SB-301 ham bands receiver. It receives SSB, AM and CW signals very well. The on/off switch is defective (it must be unplugged from the wall outlet to turn off) and the spiral main tuning gear is cracked - so it will not tune the entire band. Otherwise, physically & electrically ok. .... It comes with a copy of the schematic and instructions - $100 plus shipping from Schenectady, NY

HI Gang,

I'm trying to help a friend price a couple of radios
he wants to sell, anybody got a good idea what these may be worth?

National NC-98 with National speaker, very good condx,
played a few years ago hasn't been turned on in
a while.

National NC-98, not bad, just not a nice as the first one.
playing condx. unknown.

My friend want to take them to the hamfest tomorrow.

Thanks,

Ron

3698. Need clean wav recording of WWVB

Source record: 54207

Hey all!

I'm a college student in upstate NY. Want to do a signal processing project using the BCD data stream from WWVB (broadcast on 60KHz) out of Ft. Collins Col., problem is that my rig blew up during a lightning strike, and now I have no way to receive the signal. I was wondering if I could talk any of you guys in or near Colorado into recording a few minutes (3 to 5) of clean WWVB signal and emailing it to me at tannerpa@clarkson.edu or p_a_tanner@hotmail.com . WWVB has no vocal announcement, it's only AM DSB-SC modulation carrying a PWM BCD data stream. You'll know you got it if you hear a pulse every second. I've tried contacting WWV by telephone, as it broadcasts both vocal announcement and BCD data, however the telephone signal is the vocal announcement only. Best results probably at night. I'll send $20 to the first person who sends me a useable wav file, for their time and effort, and to express my appreciation!

73,

Pat Tanner

Date: 2001-04-21 01:56:03 UTC
From: Brian Denley <bdenley@mediaone.net>
Message-ID: <TM5E6.5254$nO2.6680105@typhoon.ne.mediaone.net>
Source record: 54223

While restoring an SX-28, I have aquired the Army maintenance manual (SX-28A) and the Hallicrafters manual for the SX-28 itself. The Army manual has much more information including a chart listing the resistances to ground from each tube socket pin. Both manuals give operating voltage charts at each tube pin BUT the voltages listed don't even resemble each other. I was under the impression that these two receivers are virtually identical. Should the listed voltages be that different between the SX-28 and 28A?
Thanks for any info.

==========

Normally I don't respond to offers like the above ,but on this occasion I
feel I have to react.

The EL37 is a pre WW II pentode used in the output stage of domestic
(broadcast) receivers with an output of up to 11.5 Watts . (Va =250 V ,Ia =
100 mA)
As far as the asking price is concerned Arnold either made a decimal error
(we all do from time to time) or he tries to take the amateur community for
a ride . Even US$11.30 seems on the high side for this type of
valve..... Hope that Arnold ,in future,will offer his ware at
more realistic prices.....at least on this NG or perhaps even better
.....not at all !

Brian,
In older sets, the instrument doing the reading often makes a very
noticeable difference, especially on grid voltage measurements.
See if the two texts indicate anything about what kind of meter
was used, and any indication of ohms/per/volt rating. That might
explain the differences.
If they are generally within 10 or 20% of each other, or what you
measure, I wouldn't give it any further thought.

Howdy all,
For a couple of years now, I've been picking away at a 1960 vintage Hammarlund HX500 transmitter which just "had" to come from a flea market. Though inoperative, it looked nice and after 30 years in ham radio I knew it was a bit of a rare find and right I was. I've managed to scrounge and find schematics however and have them in .jpg format as well as a 4 page brochure (downloaded from bama). If there's anyone out there who is currently using, trying to restore, remembers or has any "stuff" for an HX500 specifically, I'd like to hear from you....swap info etc.
No, I don't have it on the air yet....still picking away at it - seems I'm gradually undoing a history of *&^%$#-ization that rendered it U/S heheh.

3720. NRI Sig. Gen. Voltage at case + doesn't work

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-04-21 21:42:39 UTC
From: 451ctds@pop3.concentric.net
Message-ID: <3AE1FF1F.E356CCE0@pop3.concentric.net>
Source record: 54237

Have NRI National Radio Institute Model 88 Signal Generator,
unit doesn't work, and has voltage present at case. 110 VAC = off
60 VAC = on There is no output on any range. I replaced many
capacators, starting wioth the paired electrolytics, all remaining ones
pass the "squealer" and DC test, transformers and wiring look OK.
Am new to troubleshooting tube gear, have no tester, tubes light.
Any ideas welcome, and is the case voltage normal ?

3721. Wanted - schematic and/or service manual Fujistsu Ten Ulimited FTP40-292H

I thought all versions of HT33x used a single PL172. There is (or was)
an expensive EIMAC equivalent, not sure if it's still available or if
Svetlana now makes it. Using a good tube, the amp could easily produce
the legal limit.

The following items are left from the estate of a SK friend. Please make me an offer on anything listed. I will be happy to send digital photos of the amp.
Thanks, Phil, KG6KB.
1. Professionally built kw amplifier deck using two 3-500Zs or 4-400Zs. It has Eimac air systems sockets. The components are all top quality. Covers five bands, 80 - 10 meters. Has a built-in filtered filament power supply for the two tubes. It needs a blower, tubes, chimneys and a high voltage power supply probably 2-3kv for the plates; this amp. could be rebuilt or parts salvaged.
2. Radio Amateur Handbooks, 1953, 1954, 1961, 1970 and 1973
3. Call Books, 1927, 1939, 1946, 1956, 1962, 1978.
4. CQ Magazines, 1976, 1982, '83, '87, '88, '89, '90, '91.
5. Station log books from the 20s thru the 50s.
6. Cathode Ray Tube, RCA, five inch, No. 5CP7A
7. Turner hand mike, 355C

Source record: 54150

Thanks to all that replied...
I had an HT-33B many, many...well, it was a long time ago<:-)), but couldn't remember what it used for a final, other than it had a *big* external anode Pentode made my Penta Labs with 1000 watts plate dissipation. I, for some reason thought it was not the PL, 172, but stand corrected.

As to the straight HT-33, I do remember that it used a pair of tubes that had a base structure much like a 4CX-1000 (twist into place...no pins) and that describes the 4CX-300s that others remembered.

BTW, When Penta labs closed, Eimac made a replacement that cost $1200 back in 1979. Unfortunately I think I got rid of all those "old" manuals the last time I cleaned out my outdated books and reference manuals. Course, it could be stashed in one of many big boxes of old books, down in the basement...Can't really believe I'd throw out *My* Eimac "Power Grid Tubes" manual. I'm going to keep looking.

"I think" the replacement was an 8295, or some such number that ended in 95. They only supplied it for a few years.

As far as I know, no one makes a direct replacement for the PL-172, but remember seeing a 4CX-300 on the Svetlana site at not too bad a price.

Although the HT-33B was capable of running the full legal limit by today's standards...I was getting about 1600 PEP output (with my voice characteristics) running an average of 1 KW DC input under the old regulations.

The HT33A ran the same tube, but I don't think the "A" had quite as much power out as the "B". The straight 33 was well less than either the A or B models by a good 30% and as Gary said, could run a KW DC input, down hill, with a tail wind, on a good day.

Again, Thanks all.

Source record: 54151

I found the Eimac "Power Grid Tubes" quick reference catalog #175 and the replacement for the PL-172 used in the HT-33A and B models was indeed the 8295, or 8295A. I was correct, I couldn't throw away my Eimac guide! <:-))

It was quite a power house and capable of 1700 Watts "useful" power output in class "AB1"
That was with 3000 volts and a plate current of 800 mills.

The 4CX300s used in the straight HT-33 were capable of 400 useful power out in class AB1, for a total (on a good day, down hill with a tail wind <G>) of 800 watts for a pair of them. That's less than half the capability of the PL-172, but Hallicrafters didn't necessarily run them as listed in the Eimac book. I'm guessing that Hallicrafters probably stuck with class AB1, but they may have gone to AB2.

However, I'd guess that the power out ratios are pretty close with the 33 running some where around, but maybe a tad better than, half that of the 33A and B models.

I did some more searching and could find neither 4CX300s, PL172s, or 8295s.
So, where can I find tubes for the HT33 series?

I may have missed some, but looked at several of the old tube suppliers as
well.

3744. Help - Harvey-Wells R 9-A Bandmaster Receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-04-22 08:11:40 UTC
From: Mike Srock <msrock@chartermi.net>
Message-ID: <te54g6a8sgls34@corp.supernews.com>
Source record: 54153

I just found one of these nice little receivers. It is in good
shape but I believe the main tuning and band switch knobs are not
correct for the radio. Does anyone have one of these rigs?
I need coppies of the manual as well. I would like to overhaul
it and align it but I am having a hard time finding any documentation
for the rig. Anyone who has manuals or knobs please contact me.
Please CC my email address if replying to the list.

Thanks!

Mike Srock

3747. Re: HT-33 (tube capabilities) 4CX300 and 8295A(PL172)

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-04-22 12:49:00 UTC
From: aa5qt@aol.com
Message-ID: <20010422084900.25161.00000213@ng-mh1.aol.com>
Source record: 54156

>>I did some more searching and could find neither 4CX300s, PL172s, or 8295s.
So, where can I find tubes for the HT33 series?

I may have missed some, but looked at several of the old tube suppliers as
well.<<

All of these are around (I use the 8295's in my HT-33B)- just do some searching
(and they're not cheap, except for the 4CX300A's used in the HT-33)).

I desperately need some space so I have reduced the price on much of the gear for sale on my M5POO website at www.nomis.co.uk.

If you looked once - check it out again, if you've only just found out then have a look. You never know, there might be just what you need?

If you are interested please e-mail me at simon@nomis.co.uk

Regards

Simon M5POO

3754. FS: JOHNSON 500 - Very scarce rig!

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-04-22 18:05:40 UTC
From: jimmoci@aol.com
Message-ID: <20010422140540.08697.00000590@ng-fz1.aol.com>
Source record: 54163

Hello all,
I am offering my Johnson 500 RF Deck up for sale. I bought it as a project a couple years ago without the P.S./Modulator. It was tested on a working PS and seemed fine. After aquiring an old broadcast xmitter the project got shelved and I no longer need the unit. The front panel does have some scratches- I guess overall about an 8 out of 10 on condition. The case was stripped and powder coated by the previous owner but never painted the original Johnson maroon color. It is now a primer gray color.The chassis is in nice shape and appears original with no hacking or crazy modifications. I also have the original Johnson 500 manual. I want $1000 CASH (FIRM-no hagglers please) for the unit. I realize most want to see before they buy so I will be bringing it to the Pen-Del Hamfest (Delaware) on April 29th and the WARC hamfest (Wrightstown, PA) on May 6th for you to check out. I am not interested in shipping this beast as of yet- If I decide to ship I will repost again before putting it up on E-Pay. I will have pics available online Monday or Tuesday @ http://members.aol.com/~jimmoci/johnson.jpg
Thanks!
Jim

P.S. For those not familiar with this unit it is just the RF Deck. There is no Power Supply/Modulator. THIS IS NOT A PLUG AND PLAY UNIT. You will need to build or buy a P.S. and modulator to make it work. It is sold as is because it is a 45 year old boatanchor!

3755. What is the best way to store BA's????

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-04-22 20:38:56 UTC
From: nc183d@aol.com
Message-ID: <20010422163856.25150.00000975@ng-mq1.aol.com>
Source record: 54164

Hi All,
I know that these old gems need to be exercised periodically, but what would be the best way to prepare a vintage Boatanchor for storage? Would including a package of anti-dessicant harm anything? The storage would be dry but not climate controlled. This would mean nasty variations in temperature and humidity. Any information/opinions would be greatly appreciated...
rgds,
Mark S.

3757. Boatanchor Collection FS

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-04-22 21:20:53 UTC
From: pember3@mail.com
Message-ID: <VWHE6.1209$QV4.92653@www.newsranger.com>
Source record: 54166

Would anyone out there be interested in buying a boatanchor collection which consists of the following:

Motorola built 390A
Hammarlund HQ100 with S-100
Hammarlund HQ180AC with S-200 speaker
Hallicrafters SX99 with R46 speaker
Hallicrafters SX122 with R48A speaker
National NC109 with matching speaker

All are working and in very good to excellent cosmetic condition. The 390A, 100, 180AC, and SX122 are particularly nice. I also have a very nice NC183D with speaker that I would like to keep, but if necessary to sell the entire lot I would include that. The price for the lot would be $1700.00. The 183D would add $250.00 to that. Shipping, which I would rather not do, would be extra. Location is Rockford, Illinois, 75 miles west of Chicago on I-90. I'll be happy to answer any questions via email.

Bud

On Saturday, May 12th, 2001 the CC-AWA will
host it's annual "Spring Swap Meet"
at the North Carolina Transportation Museum,
"SPENCER SHOPS ".

This is a really nice museum with an operating Steam
powered train, a working "Round House",
and lots of interesting exhibits.
Bring the entire family.

The Swap Meet starts as soon as the Museum opens at 9am.
It will be in the picnic area under the shelters.

The admission to the museum and the Swap Meet is F R E E !!!!

Everyone is welcome, you do not have to be a member of the CC-AWA
to take part in this or any other CC-AWA sponsored event.

Spencer Shops is located in Spencer NC, just a short distance north
of Salisbury NC, and just off of I-85 at exit 79. Look for the large brown
signs that will direct you to the North Carolina Transportation Museum,
"SPENCER SHOPS".

Remember Spencer Shops doesn't open until 9am, there no need to get
there early.

73,

Ron

Message-ID: <te72qaqml9tg94@corp.supernews.com>
Source record: 54175

does the unit have a power transformer or is it ac/dc?
in any case try reversing the way you plug it into the wall socket and see
if the hot case goes away..
there were 0.01 or something close frfrom line to gnd..
if that cap is shorted or has high leakage it'll cause the problem..
if it's transformer power the primary could be shorted to the core,,
in any event be careful so as to not touch electrical ground and the case..
try to find a schematic ..
use www.ggogle.com...
good luck

Well, Frank, good luck at your search for sub $11.30 Mullard EL37.

You obviously have _no_ idea about the current "market price" for NOS
Mullard EL37.
Perhaps you should do a quick internet search before you post comments like
these.
In your own words: "at least on this NG or perhaps even better .....not
at all !"

3773. FS/FT: WW2, Wireless Set ZC1 MK2 (New Zealand)

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-04-23 13:59:56 UTC
From: Nico van Dongen <nico.vandongen@compaq.com>
Message-ID: <yzWE6.55$5I.1475@news.cpqcorp.net>
Source record: 54183

I have a very fine WWII Wireless Set ZC1 MK2 that was produced in NewZealand during WW2.

The New Zealand and British forces used the ZC1 in the pacific in a similar role as the WS19 and WS22. The set covers the frequency range of 2 to 8 MHz in two bands, has an output of 2 Watt HF in CW, MCW and AM mode and is working on a 12 volt DC power input.
It is in good working condition and is complete with cabinet cover, canvas front cover, power lead and remote control. The CW key that slides in a rail on top of the cabinet, the microphone and headset (but British not New Zealand made) are also present.
During its service life the set has officially been modified for TX crystal control and positive power input to ground. The power-input modification has been reversed to negative ground. This resulted in four small screw holes in the front (now filed with small screws again) where the modification ID tag had been. I have left the TX crystal control modification with an 80 mtr crystal in place. This modification can be reversed very simple (3 wires).
Like on most 55 year old sets the paper and DC filter Cap's have been replaced.

I'm mostly interested in making a swap for more modern HF manpack sets like the Racal Squad-Call 2, Com-Call, Syncal-30 etc. Selling is an option if nothing interesting comes by.

If interested I can supply pictures of the set.

This HO-10 scope is complete with tubes but there is no manual. The power transformer, cathode ray tube, and one pot are known to be bad. But the front panel and case are in excellent condition. Thus it is sold as-is. Asking $15 plus shipping.

73, Ben K8UYA

3775. FS: Collins 75A-3 Receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-04-23 14:32:25 UTC
From: gspubl@tca.net
Message-ID: <3ae43cd6.1614747173@news.tamu.edu>
Source record: 54185

FS: I have a Collins 75A-3 receiver in extremely nice condition.
Front panel is immaculate and inside is clean. It is in its original
cabinet (very few scratches) and has the Collins mechanical filter in
it. It also has a commercial product detector installed that just
plugs in to the NBFM adapter. No hole drilling was required for the
installation. It works fine and includes a manual. I want $750 for
it. If interested call Mike at (979) 693-1461 eves and wknds or email
to: gspubl@tca.net/

FS: I have a Ten-Tec 961 power supply for the Omni series tranceivers
that require 13.8 vdc at 22
amps. Of course it will run the Paragon and the others that don't
require as much current as well as any
other brand xcvr requiring as much as 22 amps continuous duty. It
also has the built-in speaker and
matches the Omni series. I want $175 for it. New cost is $275. I
have the original manual and box to ship
it in. If interested call Mike at (979) 693-1461 or email:
gspubl@tca.net/

This is from an estate.....

The pair - in very clean cosmetic condition is available for sale. I have not applied power to them but the SK's widow told me they worked when he took them out of the ham shack and replaced them with a transceiver several years ago. Workmanship of builder appears to be very good. No burn or scorch marks. Includes original manuals. The asking price is $450 for the pair and the seller would prefer pickup at the Hosstraders Fleamarket in Hopkington NH on May 4-5th 2001. If interested please reply by e-mail and I will put you in touch with the seller.

73,

Michael

3799. Re: What is the best way to store BA's????

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-04-24 01:35:42 UTC
From: Bis Wichy <wd0hco@ev1.net>
Message-ID: <3ae4d875_1@newsa.ev1.net>
Source record: 54059

Lets go the opposite way and discuss what can harm them.

(1) Birds, Cats and Dogs love to urinate or defecate on electronic equipment. Over time, these "items", which contain weak acids, will eat through paint and metal.

(2) Insects love to live inside BA's causing all sorts of problems. Spiders, Mud wasps and roaches are typical.

(3) Field mice (Rats) love to eat vinyl insulation and chew everything else.

(3) Electrolytic caps will dry out over time. Keeping spare will do no good because they will dry out too.

(4) Metal will oxidize. Silver in switch contacts will tarnish quickly.

(5) High temps will cause plastic parts (dials, knobs, ect) to physically deform.

(6) Wide range in temps will cause metals to expand and contract. Thin enamel paint used on meters faces and needles and metal dials will become brittle over time and will flake or peel off.

(7) Without use, dial strings will become brittle and break.

(9) Some poorly designed knows will crack around the set screw hole(s)

(10) Sunlight will bleach colored paints and yellow clear plastic windows and dials.

If you can address the above issues then you should have no problems.

If you want to store your BA's for a prolong period of time (40 - 100 years) here is what Uncle Sam recommends (because they do it all the time).

(a) Remove all tubes and store in small boxes. Label each box. Store equipment manuals in a plastic bags. Place the manuals in inside another plastic bag. Place a small sealed plastic bag with a crushed mothball inside that bag. (This will kill any silver fish, carpenter ants or termites that make it into the bag).

(b) Remove all electrolytics and store apart. Place labels inside the equipment where the electrolytics went. They will dry out in about 20 years or so and will sometimes leak. You might want to store some books on capacitors since it will be a fair bet that high voltage electrolytics will not be around in 40 to 100 years and you might have to make your own!

(c) Rub vaseline on plastic parts, knobs and gaskets. But NOT plastic dials! Spray metal cabinet lightly with WD-40. Use wooden spacers on the top and

buttom of cabinets and pack in a plastic bag about 10 mils thick. Also include a small sealed plastic bag with a crushed mothball inside your larger bag.

(d) Store equipment in a water proof steel or fiberglass box.

(f) Ideally this storage box has a vacuum attachment so you can pump out most of the air.

Hope that helps!

So where EXACTLY do you plan to bury your beloved BA's?
Talked about buried treasure!!! Yikes!

-Biz WDØHCO

Source record: 54060

I have a Trans Oceanic 100 D that seems in good shape. It is missing the battery box and I would like to hook it up using a AC power supply, like what you would call a "wall wart". My question is; what voltage do I set the supply at? The way I see it would be at 12 volts....does anyone have an idea what voltage this radio operates at? I also understand this radio is positive ground, correct?

One more question.....if I would ever want to use the radio on DC....where can I get a new battery box?

Thanks and 73's

Recently acquired HX-50. Works fine on 80 meters. It will not load on any other band. Drive control has no effect on these bands. A couple of years ago I almost purchased another HX-50 but the owner (not the original owner) stated that he was having trouble with loading on several bands and could not find the solution to the problem. So I passed on that one only to end up with a similar problem with this unit. Is this a common problem with this transmitter? Any suggestions appreciated. Thanks Paul K7CKZ

3806. HELP WITH - Oceanic R-1000 D

Newsgroup: rec.radio.amateur.boatanchors

Trans - Oceanic R-1000 D

I have a Trans Oceanic 1000 D that seems in good shape. It is missing the battery box and I would like to hook it up using a AC power supply, like what you would call a "wall wart". My question is; what voltage do I set the supply at? The way I see it would be at 12 volts....does anyone have an idea what voltage this radio operates at? I also understand this radio is positive ground, correct?

One more question.....if I would ever want to use the radio on DC....where can I get a new battery box?

Thanks and 73's
Dave Pinebluff, NC

I had an HX-50A many years ago, and it dropped off on 10 meters
only. Turned out to be problems in the local oscillator. You
could check those frequencies on a receiver and see if its
osc'ing.

Dave,
You are correct in that the Zenith uses 12 volts. There are three posts for the battery connection on the rear chassis. You use the two posts that are close together. The upper post is +, the lower post is -.
Radio Shack sells a battery holder for 8 AA batteries, that works well. The AA batteries will run the set for +50 hours.

Source record: 54092

Hello,

Anyone out there who can offer any information on the WRL Globe King 400 series would be very helpful to a restoration project I have begun. Schematics, manuals, parts, tubes, plug-in coils ... any thing you may have that would be helpful, including simple advice and hints.

The goal is to restore, not to modify, so original parts or even known sources for parts is very important to me. This is a long term project, so anyone interested in giving a hand in getting this vintage transmitter back on the air in its original form is of course more than welcome.

Anyone going to Dayton (I cannot attend this year) keep your eyes peeled for anything and if you could be so kind as to forward any contacts (email, phone numbers) to me it would be very much appreciated.

I am in the middle of restoring several Heathkit DX-60's, so the WRL is only in the parts and information gathering phase, and I will be starting getting my hands into it once the Heath restorations are complete.

Thanks in advance.

John KB2TQW

FS: I have the following stuff for sale, Unless otherwise noted it
is absolutely excellent to mint in appearance.

Lafayette 6 Meter tranceiver, $65.

Gonset Communicator 2 meter tranceiver, $75

Eico 717 electronic CW keyer (new condition), $55

5 years of Popular Electronics magazine, late 60's, early
70's, in original PE binders, $50/all.

Hallicrafters TO. Keyer (HA-1) electronic CW keyer, $55

If interested in any of this call Mike at (979) 693-1461 eves and
wknds or email to: gspubl@tca.net

3839. Re: HAMMARLUND PAINT?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-04-25 17:07:17 UTC

Hammarlund made many colors for their cabinets/faceplates depending on model/Year. Whatever color it is now take it to a good Auto body shop and match it on their computer. I found this to be the most accurate way to do the matching. On the cabinets, you have several textures being used. Sometimes you need to spray a texture paint first and then the final color. Others you may have to use a flat clear coat just to match the original finish.
To bring it back to realistic originality requires the help of a magician! 73 Chris VE3NGW/W4 Florida

Source record: 54101

I have a very nice commercial linear amplifier for sale. It was made by Special Design Products of NY. It runs a pair if 4CX-250's with a B&W Pi Net, 80-10M. It works great. Has about 600W out CW. This amp is a rack mount but you could put it into a 10 1/2" cabinet or let it stay as it since it is totally enclosed. It is made to work with a transmitter since it has a manual bypass switch. Perfect for a Viking, Halicrafters, etc. transmitter. Or you could use it with a transceiver if you have a DPDT coaxial relay. Runs on 120 VAC. Very nice and compact for its era.

Heavy! (All good amps are!) You can pick it up and I will demonstate it. I'm near Philadelphia or can bring to Dayton for a buyer. Email with questions. $475.

73,

Bill, K3PGB

Barry,

The biggest enemies are humidity, temperature and radiation. I did environmental qualification analysis for electrical and electronic equipment in the nuclear industry for about 15 years.

Humidity generally combines moisture and oxygen, both which can seriously degrade polymers, including natural rubber or synthetic rubber insulation. Also, humidity can propogate corrosion and mildew/mold. A lot of copper plated chassis such as used in Drake rigs and others show this. I had an SP-600 in the (humid) basement, and there was spideweb-looking mildew damage on the top of the chassis of an otherwise fine rig.

High temperature can dry out vented components, but usually temperature is a slow acting mode of degradation unless you are in nuclear accident conditions! Warmth helps drive out humidity, cool or cold surfaces can condense moisture onto the surface.

Radiation is slower acting, unless you're microwaving or, again, in nuclear accident conditions. Thermal radiation can cause discolorations, and ultraviolet light (such as from the sun) can do serious damage to paint and polymeric materials. While UV radiation is considerably longer in wavelength than gamma radiation, crosslinking will occur in polymers such as vinyl and polyethelene. Good quality coax made for UV resistance (and for direct burial; the moisture thing) is much less prone to crosslinking, which causes embrittlement of the "rubber" or "plastic". Also, too see the effect of UV from flourescent lighting, take a look at old Apple Macintosh computer cases in your local Goodwill or Salvation Army store.

I now keep my precious equipment in a sealed, zippered bag that pillows are sold in, and I use a couple of small dessicant bags. I store the rigs in an upstairs, temperature controlled environment (a closet). All of the stuff in the above paragraphs are the reasons why.

Hope this helps,

Ted W2ICV

3848. RCA AR88 repair question

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-04-26 02:00:40 UTC
From: JDSS <jdss@sympatico.ca>
Message-ID: <cjLF6.639725$f36.18440506@news20.bellglobal.com>
Source record: 54108

Hi, I have an ar88 that apprears to have some minor leakage from the power xformer and one of the "bathtub" filled cans. The radio works A-1 but I know that
the leaking prob needs to be addressed. This was noticed before any real mess has been made inside the radio chassis. I know that the oil filled parts are pcb
and am looking for ideas or possible solutions to fix this. A guy I know said he
has opened up the oil filled cans and have heated them to liquify the oil to then be removed. Re-sealed and re installed. I realize this technique keeps the originality
of the receiver, but i'm thinking of replacing the leaking cans with suitable modern replacements. The same fellow has a never installed ar88 replacement transformer, but i'm wondering if I will just have the same problem with it years down the road. also wondering if all the bathtub cans(6 total) should be replaced now to avoid having to deal with this again in the future when the others start to leak which no doubt they will.

Does anyone have and solutions here other than replacement with modern parts?
Thanks, Jeff

Get your boat listed on YachtWorld.com
- the largest used boat-for-sale site on the internet.

Only brokers can list a boat on YachtWorld. However, we are directly affiliated with a yacht brokerage which has a membership on YachtWorld. You can list your boat non-exclusively with us for a pre-paid flat-rate commission. Because the listing is non-exclusive, you may still continue to attempt to sell your boat on your own or through another broker. All inquiries from prospective buyers will be automatically re-directed to you.

List your boat with us for:
$20.00 for 1 Month
$30.00 for 2 Months
$35.00 Until Sold

All you need to do is complete the listing agreement form and email it back to us, along with any photographic images you may have. We do all the rest. Your boat will be advertised within hours of submission of the listing agreement, to be seen daily by thousands of prospective buyers. We will send you the YachtWorld boat-id so that you may find your boat on the YachtWorld site. Please include in your listing agreement the transaction number which will be displayed on-screen when payment is received.

To place your listing or for more information go to
http://www.youryachtworld.com
or send email to info@youryachtworld.com

Source record: 54116

I have the following parts for sale. Too much stuff, not enough basement. Shipping (from 19087)is not included. Prices shown are asking prices for single units - let's make a deal! Big discounts on quantity purchases. Shipping weights are estimates - you pay only actual shipping charges. JPG pictures of all items available on request.

Assemblies

Power Supply Project – Small homebrew power supply suitable for a small receiver, VFO or
accessories, or tear it down for the parts. Has power transformer with the following windings:
500 VCT (mA unknown, but at least 40),
5 V 2 A rectifier filament,
6.3 V ? A heater.
Has 5Y3GT rectifier tube, 10/10 mfd @ 450 V filter capacitor, line cord, 3 octal sockets
and some other components on a 6" x 4" x 2" aluminum chassis with lots of holes.
Needs a small filter choke. Fix it up or tear it down for the parts. $2 (4 lbs.)

Power Transformers (all have 117 V 50-60 Hz primary)

Stancor PC-8412 Upright style power transformer with end bells. Secondaries:
400-0-400 V @ 200 mA HV,
5 V @ 3 A rectifier filament,
6.3 V @ 5 A heater.
NOS, very good condition except that label has peeled off, long leads. $25 (10 lbs.)

Filter Chokes

Stancor C-1412 Upright style power supply smoothing choke with end bells. 4 Henries @ 175 mA,
90 ohms DC resistance, 1500 volt insulation. Unused, good condition, long leads. $10 (3 lbs.)

Thordarson 26C94 Open frame style smoothing choke. 2 henries @ 200 mA, 60 ohms DC resistance, 1500 volt insulation. New in original box, mint. $12 (3 lbs.)

Microphone Transformer

Electrical Specialty Company "34A1 Type CAZT 302629". This is a mil surplus unit meant for
use with a carbon mike (T-17, maybe?) Primary 35 ohms 0.1 amp DC, secondary 600 ohms (also

tapped at 200 ohms). Hermetically sealed metal case, 2-3/4" on a side (cube) with ceramic lug
connections. Unused but case has many small rust spots. Tested with VOM – windings are not
shorted to case or each other, and are not open. Asking $1 (2 lbs.)

Tubes

Receiving tubes - NOS ones are in original boxes. All used receiving tubes tested and good on
Hickok 6000A tester unless otherwise noted. NOS tested at your request. Listed by type,
condition, quantity, price each for single tubes, special notes. Discounts on quantities - I
really want to sell these! (Make me an offer on the whole box?)

Note: The above is just a small sample of the tubes available. Please email your needs - I may
have what you need.

Tube Sockets and Connectors

7 pin Septar socket for 826, 829, 832, 3E29, 7094, etc. – E.F.Johnson 122-248 socket, used. Have 2 $2 each (1 lb.)

12 pin sockets – These are Amphenol MIP12T sockets with the center key, like the octal and 11 pin types - but they're 12 pin! Yellow mica filled bakelite. Slightly used - one or two pins have been soldered to, otherwise they're practically new. I don't have any matching plugs! Have 14 of these - price 10 cents each.

Miniature tube shields – Have a good quantity of used plain steel tube shields for both 7 and 9 pin. Various sizes – email your needs. $0.10 per shield

Slide Switches

SPDT Slide switches - NOS, black slide with bakelite insulation. Have 98. $0.20

DPDT Slide switches - NOS, black slide with bakelite insulation. Have 28. $0.25

Connectors

RCA phono jacks – NOS, plated brass with black plastic insulation. Mount in single hole with
nut, washer and ground lug (supplied assembled). Have 650. $0.10 each

RCA phono jacks – NOS, plated brass with white ceramic insulation. Mount in single hole with
nut, washer and ground lug (supplied assembled). Have 180. $0.20 each

Publications

QST for May, 1995 – excellent, $1
QST for June, 1994 – mint, still in plastic shipping bag $1

Miscellaneous

Snap Switch - A real antique, surface mount switch meant for house lighting but perfect for
antique-style power supply on wooden chassis. Rated 10 A @ 250 V. Round white ceramic base
with snap-on brown bakelite cover. Screw terminals inside, wiring is done via holes in the
base. 2-1/2" round, DPST with double-break contacts. NOS, excellent condition. Price $2 (1 lb).

Sonalerts - Model SC 628 Sonalert device by P.R. Mallory. Require 6 to 28 VDC @ 3 to 14 mA.
Produce 2500 Hz tone at 68-80 dB SPL. Unused, tested, working, very good condition. Have 3.
Price $1 each (1 lb)

Control Box for Alliance Tenna-Rotor. Classic unit from early '50s - sloping front brown
bakelite case with meter. Old, beat up, cracked and glued case, some parts missing -
a real bottom-of-the-junkbox find. Transformer, meter and switch assembly good.

Free for the
postage. (2 lbs)

Plastic piece from BC-221-D. 9-1/2 x 5-1/4 inches, has schematic on one side.
Free for the postage.

Please feel free to email with any questions, and to make an offer for some or
all of this stuff. More to come, too.

From: John Dilks <oldradio@worldnet.att.net>
Message-ID: <3AE7F1AF.2430@worldnet.att.net>
Source record: 54117

To all,

I need a W1BM -or- 1BM QSL card for an important historic exhibit I'm putting together and for a QST article for my column.

In the 1922 callbook, his name and address was
1BM, Homer E. Nichols, 513 Pequonnock St., Bridgeport, Conn.

The years of the card preferred is 1920 to 1924, but any years will gladly be accepted.

He was quite active around that time, so there should be cards around in some of the collections.

I'm prepared to purchase or trade for this card.

I was curious, because I never heard of the RG1, so I did some looking around. The only thing I found was a vague reference to the RG1 on Harry Lythall, SM0VPO, homebrew web site. The reference is at the bottom of the page for a tube (valve) receiver at "http://sm0vpo.8m.com/rx/tube-rx.htm".

Maybe you can email Harry and ask him if he can supply some information. I looked on his web site, "http://sm0vpo.8m.com", but couldn't find a email address.

Maybe it's incredibly rare and worth thousands of dollars. :)

>rgds,
>Mark S.

I've had good luck storing old electronics in trash bags. Wrap an item in one trash bag, seal it. Wrap it in a second trash bag, seal it. And a third bag, too. Keeps the dust, air and humidity out. Then I store everything at a storage facility, non-temperature regulated.

Finally, I set out some mice and rat bait, in case any hungry critters are about.

I haven't "lost" anything yet -- and this stuff is stored in Houston, where it gets real hot and humid.

I suppose you have to worry about the electrical components degrading, but I'm not sure what you can do about that.

Larry,
The "GE Essential Characteristics" and the RCA "Receiving Tube Manual" are both VG. Also, any older ARRL handbook, from 1955 back, has a nice section on tubes in the back.

Source record: 54129

Hi Reader,

Recently acquired a FT980. However it has developed a problem on SSB. A report of FM type modulation on SSB. Microphone exchanged etc.Monitoring the audio on the rig itself seems OK but note the problem on a 2nd RX when on TX.

Wonder if you may have experienced a similiar problem?

It may save a long trawl through the rig with the Service manual and scope etc.

3877. Trying to make S-120 respectable

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-04-27 02:22:56 UTC
From: Nick Kennedy <nkennedy@tcainternet.com>
Message-ID: <tehm05j2la5s16@corp.supernews.com>
Source record: 54137

The S-120 is a terrible receiver I used when I was around 15. Now I have another one. Inspired by a guy who was using an AR-3 for actual QSOs, I thought I'd try to do the same with the S-120. But I had to do something about that awful BFO sound.

It doesn't have a real BFO--it kinda goes into oscillation by grounding the suppressor of a mixer tube thru a pot. The CW note sounds like a tree frog in love, Plus a whole bunch of hum. So I added a bunch of filter capacitance and built a real BFO using a 455 kHz crystal in a transistor oscillator. Now it sounds exactly the same as before.

Is the problem related to the fact that the local oscillator and "converter" are the same tube? (This is a 4-tube radio. Not Hallicrafters finest hour.)

73--Nick, WA5BDU
in Arkansas

Hi all. I have a VERY nice Yaesu VX-5R for sale. I'm the original owner, the unit has only been used very lightly, and never abused. I have ALL the original packing and manual, plus I have the nice pocket reference that VE3AYR produced. I'll even throw in the Yaesu leatherette case that they made for this unit.

The unit looks and acts just like the day I bought it brand new. I've installed the handy spring-clip style belt-clip (Motorola brand) but you can easily put the original clip back on, it's included. The reason for selling is that my old eyes just can't read the tiny print any more (sigh).

When bought new (February of 2000) with the above accessories it cost me over $400. My selling price is $295 plus S/H. Price is FIRM.

I'm sure you'll like this tiny little powerhouse, don't miss out. First money buys it.

What the hell is going on here????? I cant believe the prices the old Johnson AM gear is going for.....Valiants going for a grand, T'bolts for more, Vikings for about the same.....and a few years ago you couldnt give this stuff away!!!!! And that Invader new in the box for $2275.00 on ebay and Im sure it will go higher.....boy oh boy! I wonder if all these rigs are going to show up on 75M AM? Is AM making a come-back or are these rigs just an investment. Just a thought.

3892. Need advice for Johnson KW Matchbox

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-04-27 12:43:53 UTC
From: Adam Adkins <km5nNoSpam@earthlink.net>

I recently came by a Johnson KW Matchbox as part of a package amplifier deal. The device tunes perfectly, but the SWR/power meter didn't work. Upon pulling the cabinet apart, I found that the meter and all of its supporting components are in a sealed can, and that the shielded cable was cut.

I would like to get the meter working again. It seems to be in good shape, and still has free movement, but the original documentation doesn't say much about where to hook it up. If anyone can give me some guidance on where to reattach these wires, I would greatly appreciate it.

Thanks!

I'd bet that most of today's "collector" gear never even gets plugged into the wall outlets, much less put on the air. The collectors would rather stick the gear on a (sturdy) shelf and stare at it, and brag to their friends about it. Sure, there's plenty of great ol' BA gear still on the air, and a lot of the "attic queens" are being resurrected and brought into service, but I still say most of it is "eye candy" these days. As for me, I operate mine (but then, I don't own any BA gear that I'd consider to be "collector grade").

If I remember correctly ...

The shielded can should have three wires attaching to "tip jacks" at the
rear of the chassis, red black and white. These
"tip jacks" are used to connect a Johnson SWR-coupler that sits in the
coax
line to the meter which is switched forward and reverse.

Regards,
Ed, N5EI

My father left me with a huge assortment of tubes and tube-like devices like CRT's.
I am trying to determine their value and use. Some of them are military surplus and are still in original boxes. A partial list follows:

GE Jan-12GPZ
Raytheon RK-65 K2588
Sylvania Jan 3BP-1
Amperex 221-A
GE Jan 872-A
Jan 250TL
Heintz & Kaufmann VT-127-A
RCA 3CPI crt
Taylor 866
Western Electric Jan 725A
Pioneer 5TA-75

If you can point me in the right direction on any of these I sure would appreciate it.
Thanks, Rob

Hi Adam,
Unfortunately, you are missing the Directional Coupler. That is an external Johnson part that the three wires from the Match Box's meter connect to. The Directional Coupler is about the same size and shape as the Johnson Low Pass Filter, which is about 2.5" dia by about 8" long. Try a "wanted" post, as these still turn up fairly often.

I think our Japanese ham friends started all this twenty years
ago when they started buying up old Collins stuff, perhaps not
realizing their home products could run circles around all this
tube boatanchor gear. I like boatanchors because one realizes
it's repairable and not like the stuff nowadays that requires a
surfacemount workstation and microscope to make simple repairs.

That is the best thing about having a scratch or two on your gear. No
problem putting it
on the air. Globe King 500B and Desk KW here are beautiful but not perfect.
Work on
the air just fine. At least the Globe King does and the Desk is not far
behind. Fun is
fun whatever you choose. I have a few true antique radio pieces on the shelf
for display
and conversation. Just more fun. I suspect your right about the high priced
"Collector"
(that word or term amuses me) "Quality" "Grade" equipment never seeing the
air. It
will probably go into a hermetically sealed glass case for all to see for
ever. Problem
is forever is about another 30 years when the consensus is "What the heck is
that?".
Then it goes to the
landfill.....73,

Exactly how much do you want to bet?

>The collectors would rather stick the gear on a (sturdy) shelf and stare at it, and brag to their friends about it.<

Sounds like someone who's ashamed of their own gear and/or has no friends to brag to.

>As for me, I operate mine (but then, I don't own any BA gear that I'd consider to be "collector grade")<

HOT NEWS FLASH! The "collector grade" gear works too, in fact, often better. This is clearly the biggest pile of sour grapes I've seen in years. Or maybe if I scratch and dent all my radios, I'll enjoy using them more.

Go to LB Cebik's website for a schematic of the tuner.

http://www.cebik.com

You will have to provide an external directional coupler since the tuner itself contains only the metering circuit for such a device. Frankly, I would not bother with it, but rather would use a more convenient external SWR meter in the coax to the transmitter.

I believe that the current upswing in prices in the Boatanchor
marketplace is the result of a happy convergence of Baby-Boom hams
finally being able to afford the dream rigs of their youth and the
wonderful marketing opportunities provided by the Internet.

I began to collect Boatanchor receivers ten years ago. I found
candidates for purchase at hamfests and by running classified ads, and
I was often the only person interested in a piece of equipment. Now, a
wide variety of Boatanchor gear is available online, via the
newsgroups and eBay, and the number of collectors able to buy a
particular piece of equipment has increased dramatically.
Consequently, prices, especially for quality equipment, have risen
correspondingly.

Despite my awareness of these facts, I regret not being able to afford
much of the gear I see, hi! However, I have an advantage: at age 36,
I'll be around to enjoy the rigs I do buy for many years. I do think
that prices have begun to level off, and I suspect they will actually
drop a few years down the line as older amateurs sell their
collections.

My two cents' worth, and that's exactly what its worth, hi!

Mike,

With respect to both of your capacitor questions. Yes you can replace multi-section capacitors with individual units. Just be sure you have room to mount them and respect the polarity shown on the schematic and the capacitor!

Hi all. I have a VERY nice Yaesu VX-5R for sale. I'm the original owner, the unit has only been used very lightly, and never abused. I have ALL the original packing and manual, plus I have the nice pocket reference that VE3AYR produced. I'll even throw in the Yaesu leatherette case that they made for this unit.

The unit looks and acts just like the day I bought it brand new. I've installed the handy spring-clip style belt-clip (Motorola brand) but you can easily put the original clip back on, it's included. The reason for selling is that my old eyes just can't read the tiny print any more (sigh).

When bought new (February of 2000) with the above accessories it cost me over $400. My selling price is NOW $245 plus shipping. Price is FIRM.

I'm sure you'll like this tiny little powerhouse, don't miss out. First money buys it.

Some of the values are exactly that---unbelievable. I continue to believe that a GREAT many of the shocking values that you see are false, and influenced by shills on ebay.

One point of solace?? in all this is that generally its only the truly pristine/perfect (represented to be) items that get the shocking values--the run of the mill normal condition stuff only gets "unreasonable" values, which actually aren't that unreasonable when you consider that its a way to get something you want now instead of spending untold hours looking for it.

The post that says to buy boatanchors instead of stocks reminds me of working with a lot of oilmen during the energy crisis 25 years ago. They seemed to want to believe that we were running out and when that happened the last barel of oil would be worth an infinite anount of money, but a friend of mine suggested (more reasonably) that if the world were ever to actually run out of oil, the last barrel would more likely be worth nothing.

I will say that the thing that I find most astounding is the NIB kits that sometimes "sell" for those astronomical values.

Even deleting the nospam doesn't work, your ISP won't accept messages from AOL email.

Adam,

What you need is the coupler. It is a round cylinder with a coax cable connector at each end. There are some pin jacks for the leads which in turn go to the meter. The cylinder/coupler is mounted outside the cabinet and the leads go inside through the grommet on the rear panel.

It is a fine tuner, I have three myself!

73s,

Evan

3935. What Happened to Weather Fax for Windows ?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-04-28 04:38:40 UTC
From: Eric Jones <bluewatercruise@hotmail.com>
Message-ID: <hPrG6.1486$b7.217674@news.xtra.co.nz>
Source record: 53946

Hey Guys -

Don't know if you are interested but I went to West Marine to buy a Coretex Weather Fax for Windows and heard they had a New product called Coretex 2000 SC.

Totally useless piece of junk , compared to the Weather Fax For Windows that West Marine used to sell last year under the IDENTICAL catalog number and part number - Is that sort of thing legal ? I thought there were rules to protect the consumer against that sort of thing.

Anyway I complained to the store manager and he did not have a clue what was going on - told me to write to head office.

Does anyone know what is going on ?

I saw the Coretex Weather Fax for Windows on a friend's boat and really thought it was excellent -

Where can I buy it now?

Who is this Coretex anyway ?

Thanks

Fred

Ps I am including the letter I sent to them - No answer of course - probably though t it was crank mail.

Dear Sir,

I have just been given a present of the Coretex 2000 SC Part number

148606

and I am quite convinced somebody in your organization has dropped the ball seriously. To have a company as prestigious as West Marine selling this practical joke seriously undermines your credibility. It is quite obvious that nobody in authority has bothered to open the package and check what they are selling

Your catalogue bears no relation to this weird package I got. It does not even have the same name. Your catalog entry describes a professional product with a 115 page manual and external demodulating hardware which connects to the serial port.

The actual contents of the package are

1/ A 38 page manual appears to have been written by a child as the quality of English is about that of a bright 6 year old.

2/. A dongle which has no function it seems other than copy protection - no signal of any sort is input to the computer via the serial port. We have to rely on the sound card for that.

3/. A CD ROM with a paper label : COMPUTER, RADIO & WEATHER Bonito service release 2.4

I have seen the "Real" Coretex package on many boats and what you are selling is something totally different even though it is sold under the same catalog entry as the excellent product you sold last year.

I was eventually able to get the package working and it is about as useful and as functional as the free stuff you get off the web and worth about the same. There is no context sensitive help and the manual is useless.

All the examples and station information is German and has no relevance to the USA.

I look forward to your comments.

Yours

Eric Jones

1. For a manual, try http://www.w7fg.com/ or http://www.agtannenbaum.com/ .

2. Is there a screw terminal labeled A or ANT in back? If so, try connecting
a long piece of insulated wire. Replacement telescoping antennas can be
found at Radio Shack and similar suppliers.

Yes, I have had very good luck taking pieces to an auto paint supplier and having them make up a match. For about $30 I get a spray can of the right color plus a pint can with the remaining unused paint. Paint suppliers are the guys who make paint for auto body shops and sell them other stuff -- check your Yellow Pages.

The 1000-D TransOceanic can use any 12-volt AC adaptor which has a 3/32-inch negative tipped plug. Start at Radio Shack and fan out from there :-)

Original battery carriers are pretty impossible to find, and nobody makes reproductions, as far as I know. You can kludge one together with duct tape, wire, and flashlight batteries, if you know what you're doing and you're not interested in showing guests the inside of your TO.

Hi,
I picked up 3 of these in a surplus lot. Two work, one is in need of
work.Here are the details.

#1 Serial# 2128. VG condition,minor scratches, working.
C/W dust cover,Operating instructions(original),Valve data
manual(original)
1 lead with clip(for TC1/TC2)

#2 Serial # 2060.VG condition, Minor scratches,working.
C/W Operating instructions(original, some writing on
cover),Valvedata
manual(original, in 3 ring binder) 1 lead.

#3 Serial# 2137. G condition, missing some panel screws,one
plastic switch cap
missing ,one damaged, Right meter NOT WORKING.
C/W photo copies of manual and instructions, 1lead.

Pricing. Pricing includes packing and shipping in CAN/US via ground
courier.
#1&2 1000.00 USD First reply gets #1
#3 %00.00 USD

Payment. Payment is by: Money order,Certified cheque,Personal cheque.
M.O. and C.C. will ensure quickshipping.Personal cheques
must clear
before shipping

I know that this seems high. I saw one go on ebay for 1225.00 and It did
not have a dust cover or a valve data manual and shipping was not
included. I would like to sell them on the news groups but I will go to
auction if I must.

Regards,
John Mac Cormack

I wonder if anyone with a long memory might recognise type 4011B (no, not the CMOS bug!).

There's pictures and a few words at www.qsl.net/g8gsq - Given STC as the maker, I wondered if they might have been used to drive cables or somesuch.

Thanks for any help.

Steve

Hi All,

I've got a mint condition Icom IC821H with optional CTCSS unit and SM20 desk mic which is
now surplus to requirements.

The radio and Desk mic are all in mint condition and come complete with original boxes, manuals
and packaging.

As the subject line says, I'm looking to swap, trade or even sell the equipment,.
Some items I'm looking for are :

Yaesu FL2100Z linear - Must be in mint condition and fully working.
Timewave ANC-4 noise canceller
Trio TS830s - Must be in mint condition and fully working.
Drake T4XC/R4C/PSU
AR88D - Must be in mint condition and fully working.

Most things Valve !!!

Look forward to hearing from you !

Best regards,

MikeT

It looks a LOT like the R-277/FRR Hammarlund I have here. The control are the same, except I have a 's-meter' between the two windows and about where your paper ID is at.

This is the radio that preceeded the Super-Pro line. Vintage is WW2 and slightly after.

My friends: "Cash & Carry" means just that...somebody hands me the money and takes it away. I refuse to be drawn into the hassle of packaging and shipping with the inevitable accusations and recriminations which so often evolve out of the process...CAPPICE ? This attitude is reflected in the bargain price. Now if you are prepared to arrange your transport, either via a friend, or a truck line, then we can probably do something. The chassis is authentic, rack mounting, covers from BC band to 20 meg., power supply is home brew and adequate, speaker is a permanent magnet dynamic, and the whole outfit is housed in an old pre-war wooden console radio cabinet. I am answering enquiries as best I can, but my ISP is frequently out of service although they have all kinds of fancy promonitions going on. VE7AFN.

I love that!!! "Nobody screws anyone on ebay." I'll try to
remember that next time I pay a couple hundred bucks for a "Mint
condition" item and receive a rusted, fried, chunk of crap. It's even
more fun when the sell makes sarcastic replies to his negative
feedback and continues ripping people off. Not saying that is the
case this time (sure it isn't) but people definately do get screwed
on eBay... been there.

In an eBay auction that has a reserve price, such as the one for the Ranger you're speaking about, the bidding usually stops right after the reserve is met and resumes just before the end of the auction. There's really no sense in bidding it up now. A smart bidder would wait until the last possible moment to bid. This is what happens it most eBay auctions.

3960. Q:AN/URM-6 Field Strength Meter/Rx

Hi Gang,
Picked up a really cool BA today. Its got two designations;

AN/URM-6B, and IM-63B Radio Test Set/Field Intensity Meter

What it seems to be is a calibrated receiver (14 KC - 250 KC).
VLF fer sure!

It uses an external power supply, which of course didn't come with it.
Can anyone help me with the pinout of the power connector, and
the voltages it requires? Any info would be appreciated.

Thanks!

Steve W6SSP

Source record: 53971

I am slowly amassing the items I think I need to repair old radios (no, I haven't begun yet, in terms of electronic repairs) and now I've decided that I want a tube tester. Looking for advice as to what to look for.

1. My collection uses everything from 4 pin tubes to the l'il 1.5v portable radio tubes. No one reasonably priced tester that I could buy will do all of those, and the stuff in between will it?

2. From what I've read here, some testers are best at one type of testing (emissions) while others are better in different ways (continuity?).

What advice can you offer for the models I should consider? And, anything for sale?

TIA

Source record: 53973

A very unusual E.F. Johnson Viking II HF transmitter- a real collector's item! This very early Viking II has a 4D32 final (similar to the Viking I) instead of a pair of 6146's. Only a few were ever manufactured. I have owned it and used it on and off since 1979. It was reconditioned last fall (tubes, caps, etc.). It works excellent on all bands - the outer cabinet was repainted - the front panel has all original knobs, etc. It comes with a perfect Viking 122 VFO that looks brand new! (I will not separate the VFO from the transmitter) - $500 for both. I would prefer pickup on these items in the Albany, NY area; but I'm willing to discuss shipping arrangements.

I highly recommend that you buy the book "Tube Testers and Classic
Electronic Test Gear" by Alan Douglas. This book explains the difference
between emission, dynamic emission, and mutual conductance tube testers.
It's a great book. The Man Himself (Alan Douglas) frequents this newsgroup.

maybe a tip for the one where the right meter does not work, i sent the
circuit diagram to someone who had the same problem
it turned out that the oscillator was not working, just replacing the
transistors in the oscillator circuit fixed it

the vcm163 injects a 15 khz tone, the amplified signal is detected and
measured on the right meter (if i remember well)
i own a mark 4 and vcm 163

Howdy all - Looking for a 1590kHz fundamental crystal to replace missing unit in my Hammarlund HX500 restoration project. It appears as if the OEM may have had wire leads but.....I'm not real picky - would prefer solder/welded/hermetic sealed types but an FT243 would be welcomed as well. Please advise price etc - love to hear from you. If an FT243 type a little low in frequency available....might be interested in same and I'll try to regrind - what say?

From: Terry Brown <terry.brown6@att.net>
Message-ID: <3AEC1CC4.3F0B1ACF@att.net>
Source record: 53985

Jeff,
I recently had almost the same experience with an AR-88 I picked up. Several of the bathtubs began leaking (fortunately, the power xfmr is fine). A friend of mine in England does open the bathtubs and disposes of the oil, then uses modern caps inside to keep it looking original. I just wired around mine with Sprague Orange Drops and the 88 works fine. There's plenty of room underneath if you decide to go that way. When I have some time, I will go in, though, and put the Spragues inside the cans.
Terry (KA5IHV)

>on eBay... been there.

That's two of us. The naive person who sez nobody get's screwed just hasn't been around long enough. My recent one was paying $158 for a non-working Icom R71A. The seller gave a nice speil about not knowing what was wrong with it. I like a good challenge, so decided to take it on. The lieing, dumb-ass seller certainly knew it was full of rust and failed to disclose it.

I may finally get it going, but it will never be saleable - even if it works, it's still a piece of junk.

Don

You can get screwed in any deal done over an Internet
newsgroup, or through a magazine ad, etc. It all comes
down to the honesty of both parties involved in the
transaction. At least with eBay you have some redress
via eBay, and the option of leaving negative feedback.

What avenues of recourse do you have if on this or the
rec.radio.swap forums?

You can buy a rig at a hamfest and get taken, unless you
have the means to fully inspect and operate the set
before money exchanges hands.

3983. WTB/WTT ART-13 knobs/autotune parts

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-04-29 17:41:42 UTC
From: "D. S. Platt" <jeepp@erols.com>
Message-ID: <3AEC5256.217622E0@erols.com>
Source record: 53993

I've just parted out an ART-13 autotune casting to get a few parts I need for my ATC. I have all the autotune assy.s, etc. and a few knobs, which I'm restoring. The one knob that I need is also cracked on this dismantled one. So, I'm still looking for the driver tuning knob, marked "A" on the front panel (has 13 numbered triangles). I'd be happy to trade any of the other knobs or parts for this one. I'm in the process of either cleaning or re-lettering the extra knobs, so they will be in nice shape for any possible trade. Thanks for the read.

Well, I ordered the book from Amazon.com (Tube Testers and Classic Electronic Test Gear) , and may have made a mistake by ordering the RCA Receiving Tube Manual with it.

the RCA manual ships in 4-6 weeks, so my delivery window for the two is June 15 to Oct 15. Otherwise I pay double shipping.

Source record: 53903

Hi All,
I have a National NC2-40-D and matching speaker for sale. Neither has the little feet. Both are in very good shape. I would prefer to sell them as a package. The receiver has what appears to be a crystal calibrator professionally installed. The mod could probably be backed out by another professional. I am asking $300.00 for the set and have photos for interested parties to view. The buyer will pay shipping and for this item, I will have to go to a professional packer.
Please email me directly with any questions....
rgds,
Mark S.

>The naive person who sez nobody get's screwed just hasn't been around long enough.<

Let me get this straight. I'm naive but you got screwed. Think about that.

>My recent one was paying $158 for a non-working Icom R71A. The seller gave a nice speil about not knowing what was wrong with it.I like a good challenge, so decided to take it on.<<

I ask lots of questions of a seller before I buy. When someone says it's not working, figure it's a parts radio. If it's better than that, you're ahead of the game. The seller may have lied but I'm not sure he was the dumb one.

3995. FS: TEKTRONIX 561A Oscilloscope

Have a very nice Drake L-4 amp. Has full output (1200-1300 watts) from the 3-400Z tubes. Comes with a very nice repo manual. The P/S is in a homemade case but looks very nice. It has new caps and bleeders in the P/S. Just replaced the power switch and have another that I will throw in. It has a slight rub mark on the 80m. area of the Plate knob. You can see pics at http://community.webtv.net/KF6IKC/doc
Price is $575.00 plus boxing and shipping from 96003 or pick up iwithin 100 mi. of Redding,Ca.

I also have a bunch of RF goodies,Bird wattmeter,vac.vari.,caps.,etc. on my webpage.

Take care,
Stan

After all the excitement on Ebay, I have pulled my Ranger out of the closed to put it back on the air. Now I see that it has a few scratches on the top of the maroon case. Can anyone suggest a source that provides touch up paint for these scratches.

TIA, Dick

4002. Weather Fax Coretex the truth

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-04-29 22:53:16 UTC
From: Eric Jones <bluewatercruise@hotmail.com>
Message-ID: <qX0H6.1971$b7.313273@news.xtra.co.nz>
Source record: 53910

In followup to my last post: What happened to Weather Fax for WIndows,

I visited the xaxero web site and emailed them with my post.

I got a very fast response from the author Johnathan Shelby which I want to share with you all.

Thank you for those wo steered me to xaxero.

Eric

Dear Eric,
Thank you for your letter.

I was most disturbed to see that the public and dealers in the USA are being subject to a trade scam.

What has happened is that we terminated our account with Coretex of Stuart Florida due to late payment coupled with insufficient financial resources to supply the huge demand of our product in the USA. In February this year, the USA was totally sold out and we were not shipping as Coretex were not paying us.

In order to ease the logjam we were forced to write off the considerable debt of Coretex and appoint Navcom Digital as our new importers. We did so after carefull checking with the company's suppliers and found them reliable and well respected in the market place. We as a company are proud to be represented by them.

What followed was that Coretex went and bought in hundreds of boxes of a ham radio product, presumably on credit - developed for a specialist German market and relabeled it with their name and passed it off as the "replacement" for Weather Fax for Windows. I cannot see what Coretex hoped to achieve in the long run with this action. As you have discovered, the product is totally unsuitable for the mass market. The documentation is not proofed and consequently unreadable in English. I myself have a copy on the bench and I cannot get it running properly.

I hope this letter clears up your enquiry. I suggest you promptly return the product to West Marine.

In your case as a "thank you" for bringing this matter to my attention I will be happy to arrange a complimentary package to be shipped to you as soon as I have your shipping address.

Please tell your friends that the product is once again flowing into the USA and at last we have a reliable distribution network. The product is sold as:

Xaxero Weather Fax 2000

In order to buy this you need only call

The box is professionally printed and contains our well known demodulator - a sturdy and reliable, completely waterproof unit. The CD also is professionally replicated with a silk screen label. Do not accept any substitutes.

Please feel free to distribute this letter unmodified in any form you choose - hopefully others will not be fooled the same way as you.

Yours,

Jonathan Selby

Go to ebay and pick up a RCA tube manual, your choice of year, for
about 5-10 bux. I think the other book is available at AES???
The bummer with these mega-mail order outfits is if they don't
have it that means that they don't have it. They're not gonna
order one from the publisher just for you. So Oct 15 comes around
and they send you a card asking if you want to keep it on order,
presumably waiting for enough folks to ask for the item to justify
their making a phone call. Fortunately the US has some 30-day
thing that limits exposure to this infinite backorder nonsense.
Go elsewhere.

So if this non-working R-71A only bid up to $158, what did
everybody else know that you didn't? I usually realize I have
erred when I outsnipe nobody else at the last minute.

Dunc-
Well you could try to negotiate with them...maybe you could get an
office girl to fudge the invoice to make it $25 CDN.
If they do service, make a 800-BUDDY in the service dept....maybe
he'll send ya one. Seriously, that worked once for me for an
original $45 Uniden Service Manual...unfortunately my Japanese
reading skills are lacking.
Is there some particular aspect of the machine that can be
clarified elsewhere?
Just thinking out loud....

S'matter Ed - yer ISP charge ya by the WORD? - why no PRICE? Why should some bother to Email for info that could have EASILY been included in your post to BEGIN with? MIGHT be sorta nice to know WHERE it will be shipped from as well...

I never WILL understand why SOME sellers deliberately post only HALF the needed info on an item for sale - and THEN expect to be swarmed with prospective buyers wanting "the REST of the story..."

Still have a nice little Eico 723 50 watt cw rig-(80-10 meters). It runs fine, it looks very good (has 1 chipped knob but works fine), face is nice, meter good, and cabinet good too. I looked at the chassis and it has very little spotting on it and will clean up great. The rig is actually putting out 30+ watts on 40 meters. Keying is good and Ive qsod on it recently. I will take it to Hoss Traders in NH this Friday unless I sell it before that. $75.00 plus shipping UPS from 02458 Thanks + 73s Lew / K1NDV

4039. Re: Tubes question

From: sbertsch@layla.net.ohio-state.edu
Message-ID: <9cndrl$u0$1@layla.net.ohio-state.edu>
Source record: 53809

I'm rebuilding a NC-57/57B that a previous owner messed up pretty bad.
Does the outside of the bfo coil winding go to the grid or plate of
the 6SL7? The outside winding is the lug toward you if you are looking
under the chassis with the unit upside down. Stated another way, it's
the bigger side of the tapped winding.

Thanks for any help,
Steve

This type filter was used in various aircraft in WWII for selecting the Voice or navigational Range signal on the old AN four course range stations. This one is new in the original box mfgd by United Transformer Co. NY. Electrically it has a three position switch: Range, Phone, Both. Range = band pass filter centered at 950 Hz. Phone = notch filter centered at 950 Hz., Both = no filtering. I used one of these filters for CW as a novice in the'60s with a Heathkit receiver

4059. FS: RCA World-Wide Antenna System

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-05-02 00:34:29 UTC
From: Dan Bryden <bryden@deltanet.com>
Message-ID: <3AEF563F.69901561@deltanet.com>
Source record: 53819

Another piece of history. Looks to be manufactured in the '30-40s. Model 9500A. is in original box never used. With all of the parts listed on the original parts list. The box is in good condition and a little dusty after all of the years on the shelf. The description on the box says: "This improved RCA World-Wide Antenna System is especially designed to get maximum performance from any all-wave receiver. It is built with the same precision as the RCA Antenna System used by ships at sea and radio stations in all parts of the world". Those marketing guys never change. It amounts to a dipole antenna with 46' legs and a 80' twisted pair feed line. includes insulators, gnd camp and matching transformer. $45 plus shipping. Dan

Message-ID: <Xns9094DC4AC3B5Epcrissyusenmnet@204.127.36.1>
Source record: 53823

I was recently at a Garage Sale and bought an old radio there. It was only
a couple of dollars and was in excellent condition from its outside
appearance. I would appreciate help in identifying it.
The radio has a nameplate with the following information:

Type CRV-46151
Aircraft Type Radio
A unit of model ARB aircraft radio equipment
Manufactured for Navy Department - Bureau of Ships
By contractor RCA Manufacturing Company, Inc
Contract date February 23, 1942

The radio covers frequencies from 195 kcs to 9050 kcs.

Any info about this radio would be appreciated. I'm not
a ham radio operator and not knowledgeable about electronics.
All my other radios are portable digital tuning radios from Radio Shack.

Thanks for any insights.

Hi Guys;
How about this heavy duty Galaxy power supply for your Collins?
It was made for the GT-550 which was a 500watt input CW/SSB(pep) transceiver so its probably even better than the other types used these days.
The Transformer is big & heavy, The unit is in Nice shape, No rust or Junk.
It's just that the last owner did a Lousy job of replacing/adding a Cap & a few diode replacements.
I put aVOM on the Wires coming out & heres wat I get. Please keep in mind that I am not a Tech so bear with me :-)
-100 vdc
13.6 vac
350 vdc
950 vdc
18.8 vdc(?)
All these without any load.
Here are a few pictures, so you can decide yourselves>>

From: Jim <jmullen@rockys.com>
Message-ID: <3aef82eb_4@newsfeeds>
Source record: 53829
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

I'll be bringing some medium iron to Hopkinton this weekend, here's the short list.If your interested drop me a line and we'll meet on Friday afternoon.

Viking II - Good condition but repainted - $150
Apache - Good condition, works FB, manual copy - $150
(2) DX-40's - Good condition, both work, one original manual, one copy - $50 each
VF-1 VFO - Exc condition, original manual - $25
HG-10B - VFO Good condition, mod w/pwr supply - $25

Plus some old Heath test gear, HP test gear, misc. stuff.

All but the Viking tested and working OK. The Viking looks real good, but a few suspect caps should be swapped out before pulling the big switch.

Look for me in the camping area, should be arriving Friday afternoon.

Source record: 53832

I have for sale an R390a, DX60a and HG10B VFO. The gear is presently online and in daily use. The R390a is in good working order. All meters work, all functions work. The 16 position on the selectivity position does not work. All other positions do work. Sensitivity on 40 meters is down, but all other bands are very hot. An extensive manual is included.

The DX60a and HG10b VFO work very well. I get glowing reports on CW. Have never tried it on AM. Includes copies of the manuals.

I am asking $595 for the package. I will consider breaking it up. I am located in NW MN, but could deliver between here and Chicago on Friday, or Saturday this week.

Greg

RACAL MA168 DUAL DIVERSITY SWITCHING UNIT.For sale by radio-exports.com in the UK
The Racal MA168 Dual Diversity Switching unit is a transistorised equipment designed for use with either RA17 series receivers or with RA117 receivers.It is used to reduce the effect of fading resulting from adverse propagational conditions.The unit is essentially a high speed electronic switching device, which automatically selects the greater i.f.output of two receivers.
The unit has a built in stabilised power supply and will operate on voltages from 110 to 240.It will accept rt signals,ssb signals and telegraphic signals with speeds of up to 1000 bauds.The i.f.input signals to each path are continuously monitored by two meters.
This unit is in very good all original condition and is in full working order.A copy of the manufacturers operating and maintenance manual is included.
The price for this useful Racal accessory,which includes the cost of packing and air freight to the USA,is $485 US Dollars.

For more information,or to purchase,please contact Graham Leo
info@radio-exports.com

Thank you for your interest

4089. Looking for General Radio meter bezel

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-05-02 22:48:15 UTC
From: n4buq@aol.com
Message-ID: <20010502184815.07994.00001228@ng-fb1.aol.com>
Source record: 53849

I have a (new to me) General Radio signal generator (1001-A) that is in excellent condition, but somewhere in its past, the meter face has had something splattered on it. It appears to be varnish or shellac and it won't wash off.

I've noticed that most all of the older General Radio meters look almost the same and one bezel probably fits another meter. If anyone has a good bezel from an otherwise junk piece of General Radio tube-based gear and would like to sell it, please let me know.

I know -- it's a long shot, but you never know...

73,

Have Bird model 4381 RF Power Analyst in ex.cond. This is a digital wattmeter that reads RMS,PEP,SWR,MOD%,and more. Uses two "slugs" but can be used with just one. Comes with two 500H slugs (2-30mhz @ 500 watts),A/C charger/adaptor,two N to SO-239 adaptors (unit has N connectors),and the hard to find Bird Field Strength element. Check out the link for pics http://community.webtv.net/KF6IKC/doc
Price is $500.00 plus shipping from 96003.

Take care,
Stan

It is a cross Bristo wrench. Available from Xcelite. Or you could just
file down a cheapo jeweler's screwdriver to fit.

The Xcelite BRISTOL wrenches are great but expensive. I have a set ($35) and use them frequently on gear where you really do need a long shaft and hefty handle.

You should be able to find an inexpensive set of L shaped key wrenches in assorted sizes. A large hardware store sometimes carry them but likely you'll have to resort to the Internet and order them. I don't know the places but there is a hardware source, McMaster Carr??? that has been said to have the wrenches. I have an old set that GC sold to the Radio/TV trade that had both hex and Bristol wrenches in it.

They should cost well less than $10 for a set delivered. Don't bite on the ongoing auction of the sets that start at $18 on eBay. They are cheap wrenches that probably cost the person auction them $3.95. He's preying on the fact that most people don't know about the wrenches.

And, yes, some call them "Bristo" wrenches. I still suspect it's the result of an error in an early military manual that has been propagated since then. I've never seen it written that way except in an WWII era military manual.

Hi,

I happen to have the same gear. This unit has a meter in a bakelite
housing with a glass face If it the same meter for carrier level and
output volts then just be SURE that the face is glass and apply methanol
type paint stripper to it and it should wipe off.

I wish I was that lucky. This bezel is definitely plastic. Perhaps I can find
a glass replacement. It probably would look nicer.

If these are what I think they are, I would think twice before using one. They can be dangerous. If these are the type that have a fuse in each side of the line and the fuse in the neutral side blows first, the rig is left with power to everything up to that blown fuse. This is why fuses should always be placed in the "hot" side of the circuit. That way, when it blows, very little (if any) of the internal wiring is exposed to the line voltage.

Better to install a single fuse in the hot side and use an ordinary cable. Either that, or hardwire the neutral fuse leaving only one fuse in the hot side.

If this is not the kind of plug you're looking for, then "never mind".

Just my two cents.

You are looking for the ELMENCO FUSED plug. Made of two Bakelite half shells. contained two 3AG type fuses that slid into either side. Philmore Radio Co. used to sell them. I don't know if they are still in business.

I just did a web search using Google and ELMENCO FUSED plug.

This url came up. Seems they are still available!!

http://physics.berkeley.edu/cgi-bin/eshop.cgi?subroutine=list&searchtext=fuse

Good Luck

ZM-3A military cap tester, I've got a few, $100 ea + shipping

I apologize if forsale messages are not appropriate in this group, drop me a line if they aren't.

As Alan Douglas says, "the one you can see across the parking lot at the swap meet".

These are as I got them as military surplus, warts and all. No glaring damage but
definitely USED and AS-IS. The only test I did was to power it
up and try a ceramic .01mf cap and made sure it dipped it the right place. Other than
that the only other thing I can tell you is that they were in military condition code 'A'
which means they were working.

Probably about 50lbs when you include the shock-mounted shipping container. I might
just stick a label on the shipping container, or I might pop it into a box.

Email inquires to surplus@spiritone.com.

Aaron

From: Mike Silva <mjsilva@jps.net>
Message-ID: <qf6I6.323$Bc1.160697@nntp2.onemain.com>
Source record: 53866

Hi all,

I've got some 829B tubes (1982 RCA JAN) and by design there is no structure, like a mica wafer or ceramic spacer, to align the top of the K-G1-G2-BP structures with the plates, which are themselves held in place from the top by the heavy plate leadout wire. As a result, in most of the tubes the "innards" are misaligned with the tops of the plates, and in many cases the beam forming structure looks to be with a mm or two of the plate on one side. I've never seen another tube without such alignment. Is this normal for 829Bs? Would these tubes have been inspected and tested at manufacture to insure they can operate at full voltage without arcing over internally?

73,
Mike, KK6GM

4107. FS.Scarce R109 Communications Receiver

Newsgroup: rec.radio.amateur.boatanchors

Message-ID: <tf2an8hgma609f@corp.supernews.co.uk>
Source record: 53867

For Sale.R109 Communications Receiver.

The R109 Communications receiver,dating from the 1950's,is a well designed,compact equipment,made in relatively small numbers for use by the British Army.It is a communications receiver which here at radio-exports.com ,in the UK,we do not see very often.
Frequency coverage of the receiver is 2Mc's to 12Mc's and the receiver uses 8 tubes.This one is a particularly nice example, as it still has the internal pull out spares tray,(which is usually missing),containing the original set of spare valves and a spare vibrator).Externally,the receiver is in good condition and internally,near mint.
The receiver is in good working order.
The price,including the cost of packing and air freight to the USA is a very modest $328 US Dollars.

For more information or to order,please contact Graham Leo
info@radio-exports.com

Thank you for your interest.

>wrenches. I have an old set that GC sold to the Radio/TV trade that had both
>hex and Bristol wrenches in it.

McMaster-Carr does have them. A 9-piece set is $10.43, catalog number
7048A54. You can peruse the whole huge catalog at www.mcmaster.com.

I bought the GC set at our local jobber for something like $7 a couple
of years ago. I'll bet it's still in the GC catalog.

One possible solution (a bit underhanded) is to just replace the setscrews
with regular hex ones.
Most hardware stores have a fine selection of standard setscrews in those
little slide-out boxes.
Probably okay to do this for low-torque applications, like knobs, maybe a
bit marginal if the setscrew really
needs to be horsed-down.

FS or trade. I want a good HF tranceiver (or rcvr/xmtr) to use as a station in my office. I have a Cushman 4000 Communications service monitor test set in very good condition that I'd trade to anyone who needs it. I prefer the Tentec tranceivers but others are good too. I value the Cushman at about $800.......If interested call or email: Mike at (979) 693-1461 or email to: gspubl@tca.net Other trades considered. I am also looking for a 2KW HF amplifier, either commercial or homebrew (if professional looking).

Your statement is unoriginal and weak.

So, you base your respect for people on whether or not they follow the laws that your local, state and federal government imposes on them?

Let me ask you this then, if you were around during prohibition (were you?), would you have disrespected bootleggers and consumers of alcoholic beverages up until the very point where the 18th amendment was repealed?

Good thing all those amendments came along abolishing slavery and granting women the right to vote or you still wouldn't have respect for women or Negroes.

Well, just take a look at Bill Clinton ....

>Let me ask you this then, if you were around during prohibition (were you?),
>would you have disrespected bootleggers and consumers of alcoholic beverages
>up until the very point where the 18th amendment was repealed?

Probably not. However I do respect the values of H.D.T. At least he
broke the law for much better reasons than to get drunk or to make an
easy buck.

>Good thing all those amendments came along abolishing slavery and granting
>women the right to vote or you still wouldn't have respect for women or
>Negroes.

You are way off base, here. Many people gave their lives in order to
abolish slavery, and many of those that died weren't slaves. The right
for women to vote wasn't granted because the government gave up
chasing women out of the toll booths. These examples don't even
compare to the actions of most radio pirates. There are right ways and
wrong ways to change the law, but radio pirates don't even try.

In fact, freebanders do NOTHING to try and change the law except to
whine about the FCC. I haven't seen anyone in rec.radio.cb, or
anywhere else for that matter, make even a half-assed effort to try
and change the laws regarding CB radio. That's because the collective
mentality for freebanders is to "do what you want and fuck the law, at
least until you get caught." They, like most criminals, want something
for nothing at the expense of others. I'm sorry, Bob, but that just
isn't an attitude that deserves ANY respect.

Offers are invited for..

" Radio Circuits and Data " by C.A.Quarrington A.M.Brit.I.R.E.
First Published in June 1948 by Caxton Publishing Co. Ltd. London.
This copy was re-printed in November 1951.

Condition is excelent, hardback 90 pages, appears to have been bought and shelved. Contains approx 40 detailed valve circuits of recievers, amplifiers, power supplies and test equipment of the day. Data section includes Battery charging and grid leak selection tables, Valve data etc.

Also included is a Coupon book (unused) for access to the publishers Database

scans of front page, sample circuit and coupon are on my website in much reduced size and detail. I'll send better quality scans on request.
samples are here....

FOR SALE:

Exciting novelty item: HAND-CRANKED MAGNETO GENERATOR!
Produces 120V AC. These will provide about 20 Watts depending
on your cranking speed! The size is about 3" diameter and
3" deep with a retracting handle. Fluke freq meter shows around
20 Hz on one pair of terminals and around 60 Hz on another.
You can mount these behind a sturdy front panel with a single
hole and the large nut provided.
Will sell for $25.00 each plus shipping

Color may vary from the style shown here:

laws
> that your local, state and federal government imposes on them?

It's a simple law that you choose to disobey, you obviously think yourself grandiose enough to decide which law should be followed and which shouldn't. If you choose to disobey those laws what about others?

>
> Let me ask you this then, if you were around during prohibition (were
you?),
> would you have disrespected bootleggers and consumers of alcoholic
beverages
> up until the very point where the 18th amendment was repealed?

You are getting the idea ... why respect criminals ??? I'm pretty sure you don't go to local penn's to drop off stuff for the criminals inside (as you would call them ... "good buddy")

> Good thing all those amendments came along abolishing slavery and granting
> women the right to vote or you still wouldn't have respect for women or
> Negroes.

If a law is wrong lobby to change it ... don't sit back in your homes breaking it every chance you get ... and please don't ever compare yourself to women and african americans of back then ... you are not oppressed.

The test is a joke ... I did mine when I was 11 with a grand total of about 2 weeks of studying for it (on my own I might add) ... its 100 questions multiple choice (up here anyways) and is general knowledge any operator should know.

The only thing stopping you from operating legally on the ham bands is your ignorance and your spite for rules and regs.

I have never received a speeding or any other traffic infraction. I have never received a warning. I never speed. I always use my turn signals/mirrors/shoulder check when turning and changing lanes. There is no need to. I always give myself ample time to get anywhere. I have never received a parking ticket either. Speeding is stupid AND illegal.

Well it certainly is hard to find people with the courage of their own convictions today. The way I figure it, those laws are there for a reason. Who am I to contest them or break them. The way I look at it is a criminal is a criminal regardless of his crime. I can't stand criminals of any sort, so, why would I lump myself in the same group as them? As for speeding is concerned, I don't see a point to it. The farthest I go on a daily basis is 110kms. Speed limit's 80kmh ... if I tossed on say 15kmh to that (2 points off my licence if I get caught too) it will take me 1hr 9mins, if I do the speed limit it will take 1hr 23mins. 14 extra minutes is no big deal with me. And is certainly not worth the trouble if I get caught.

As for the signals and such, using them is very important, kind of a good idea to keep the other drivers on the road informed of my intentions.

I don't know about that. I have been driving on the Los Angeles area freeways and city streets for 32 years and I have never received a traffic ticket either. I don't think this is as rare as you think - I know of several other people who have also never been cited for a moving violation.

I have, however, received a parking ticket from a city that did not allow overnight street parking in residential neighborhoods, and "forgot" to post any warning signs. A new twist on the old "speed traps" ? :>)

Anyway, I challenged the citation on the basis of 1) the violation was not done intentionally, and 2) the violation was a direct result of the city's failure to post adequate signage informing the public of the ordinance. The judge concurred and dismissed the citation.

Plus on a rather hedonistic point of view ... it annoys the hell out of
those drivers who are in such a hurry to get nowhere as to risk their and
others lives. I have to bring the camera one of these days to catch their
expressions =)

The vast majority of speeders don't purchase and install special
equipment (linear amps) and modify their rigs (frequency mods) with
the sole intention of breaking the law.

Note: Remove "NOSPAM_" if you wish to reply to this message.*

I am still in the process of repairing my National NC-173. I was wondering
if anyone has the folowing parts: The NC-183 has the same parts.

C-19 Phasing Control - variable cap from CF-1 Crystal Filter
(or the whole filter unit)

C-65 Selectivity Control - variable cap from T-19 C.W. Oscillator Transformer
(or the whole T-19 unit)

Knobs

Antenna and Speaker terminals.

Possibly other cabinet hardware.

Thanks!

John

In addition to a model called "Skyrider" and a model called "Super Skyrider"
(models which had no "S" or "SX" nomenclature, there were the following
Skyriders:

S-1 Sky-Rider
SX-3 Super Skyrider
SX-4 Super Skyrider
SX-6 Super Skyrider
SX-7 Super Skyrider
SX-9 Super Skyrider
SX-10 Ultra-Skyrider
SX-11 Super Skyrider
SX-12 Skyrider Commercial
SX-16 Super Skyrider
SX-17 Super Skyrider
DD-1 Skyrider Diversity
S-21 Skyrider
S-22R Skyrider Marine
SX-23 Skyrider
SX-24 Skyrider Defiant
SX-28 Super Skyrider
SX-32 Skyrider
S-41 Skyrider Jr.
SP-44 Skyrider Panoramic

My point exactly. 'Freebanding' is a deliberate act, carefully planned and executed. But just for the sake of argument, suppose you live on a street where the speed limit is posted at 4mph. How long until you get fed up with people cruising past your house at 1000mph? More realistically, your street is probably 25mph, and that would clock those speeders at 6250MPH!!!! Not just that, but these speeders hold drag races, don't use any mufflers, and drive off-road right through private property. When these speeders are caught, the fines are typically more than ten times that of speeders on the highway. So how do you compare radio pirates to speeding?

>Rob St.Denis

BTW, any relation to Bill St.Denis in Spokane?

so is speeding, I'm not talking touching the accelerator a little too much off a light or anything I'm talking hitting the highway at 120kmh ... people do it and say well its not that much ... when that can land a hefty fine and 2 points on your licence ...

> and executed. But just for the sake of argument, suppose you live on a

They both willfully break the law. They both know that they did it (although ignorance is no excuse), heck "freebanders" have a term for their crime, "freebanding". They use a portion of the spectra reserved for other services, which in turn can lead to prolonging those services and in the case of millitary and SAR that could mean someones life the same as doing +20% on the high way makes you more of a danger to other drivers.

> BTW, any relation to Bill St.Denis in Spokane?

Nope ... I'm a canuck.

The difference is that when you run a kilowatt amp, you do it with the
sole intent of breaking the law -- you purchased the amp in order to
break the law and nothing else. Not true with a car, unless your car
can only operate above the speed limit.

>> and executed. But just for the sake of argument, suppose you live on a

4188. Re: INFORMATION ON NATIONAL NC-183R

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-05-05 01:01:16 UTC
From: mccrk@aol.com
Message-ID: <20010504210116.24459.00002142@ng-fx1.aol.com>
Source record: 53645

The NC-183, built around 1947, is a fine old receiver. It is reasonably sensitive and, if it works properly, has a good crystal filter. It even covers 6 meters--though you will find that sensitivity on the high bands, 17 through 6, is not very great. It is adequate for use on all ham bands, from 20 down, and for listening to shortwave broadcast as well as medium wave broadcast. National Co., which built it, heavily advertised its predecessor, the NC-173, for its performance as the radio used on the famous Kon Tiki expedition that followed the route of the original South Pacific islanders who wound up in Hawaii. The NC-l71 and 183 were built like tanks and could probably work after a dunking in salt water.

Value? An NC-183 in good working and cosmetic condition with speaker could go for $250-$350.

I picked up a fairly nice Heathkit SA-2060A 2kw antenna tuner at Hosstrader's yesterday, but alas no manual. I'd like to rewind the balun in the back (it's been over-driven and repaired) and it would help to have the description.

I will buy a manual outright, or pay for a decent photocopy. Or if you've got it in electronic form, that's even better.

Thanks all!

4206. Heathkit SW-717 - Need help

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-05-05 16:06:04 UTC
From: Alain Desarzens <a.desarzens@bluewin.ch>
Message-ID: <3af4241c_4@news.bluewin.ch>
Source record: 53665

Hello all

My SW-717 has strong spurious unmodulated signals on bands A, B and C. Also
with G1 shorted. The oscillator seems to be clean.
Knows somebody the reason?
Many thanks in advance and best regards
alain
a.desarzens@bluewin.ch

The balun is a standard 4 to 1 winding, ARRL handbook has a diagram.
I would suggest a good 4:1 balun. W7RQT does an outstanding job
brewing these in his shack for a resonable price.

He is Patrick E. Buller in Issaquah, WA 425-747-7495

73, Kurt, K7UU, ARRL Technical Advisor

Ken....I have an ART-13, good condition and no mods that I'm aware of.
Some paint chips knocked off, but have run it and seems to function well.
Also have remote control box, new dynamotor and the connectors for
remote and power connections. No cables, you'd have to make your own.
I had one heck of a time finding the connectors, but did get them all.

I'd sell it all, boxed and on a truck for $700, you pay the freight. I'm also
a trucker, and could either get it on my truck or a buddy's headed your
direction if you'd like. We could drop it at your friendly, local truckstop.
Dont know what they'd want to pull it, but dont think it'd be much as we
run to PA anyhow.

If you're interested, email or call at 406-222-6292

remote and power connections. No cables, you'd have to make your own.
I had one heck of a time finding the connectors, but did get them all.
It's been kind of a labor of love, hunting down all the pieces and parts, but
fun. Even found a guy to make two of the connectors brand new if I needed.

I'd sell it all, boxed and on a truck for $700, money order or cashier's
check, you pay the freight if there is any. I'm a trucker, and could either
get it on my truck or a buddy's headed your direction if you'd like.
We could drop it at your friendly, local truckstop. Dont know what
they'd want to pull it, but dont think it'd be much as we run to PA anyhow,
if that's where you live. Or if you'd prefer, we can ship it via commercail
carrier.

Hi,
The NC183R is a rack mount set, no cabient. Needs an external speaker, the rack-mounted speaker will be very pricey... A pretty good set, an updated NC173. The NC183D graduated to dual conversion, had better sensitivity. I have an NC183 I am getting ready to sell, would expect from $150-$200 for it. It also depends on the condition, any mods, any problems, etc.....
rgds,
Mark S.

I have a Collins 32V3 that I aquired. I was told that it does not work. It was from an estate and I did not even plug it in nor do I want to. It does not have the Rack cabinet but it appears complete otherwise. It is in Ok shape- nothing obscene as far as gouges or scratches on the front panel. What should I ask for this in as-is shape? I want to take it to a hamfest and sell it- way to heavy to ship.
Thanks,
Jim

I have one complete Hallicrafters station set up and operating in my heated and insulated shop. Shortly I hope to have the second. So far I have the SX-101 and an HT32B hooked up. There is an SX101A and HT32 (in really nice shape) that will go on a desk out in the middle of the shop. I don't remember which model the third SX101 is, but that one is kinda riding the line between restoration and becoming parts. (It needs help, not just TLC)

Donations of HT33, HT33A, and HT33B would be appreciated and kept well exercised<:-)) course I could use an SX115 too. <LOL> Unfortunately with all the money I've put into the tower and shack over the last two years, I can't afford to put a lot into the system for a while. <sigh>

Just waitin' for the stock market to come back up,

Duh.
>

Different strokes for different folks!

>
There is a big difference when it comes to people collecting nice clean
equipment, and those of us willing to purchase one that is not so nice,
clean it up, and put it on the air.

I would have guessed that the unused Ranger would have gone for quite a bit
more due to the rarity of it. Let me hasten to add, that I'd not pay that
much, but if the humidity hasn't gotten to it, it was actually a good price.

>
>
> >Seems to me that if you want to get on AM could can do it for
> >a whole hell of lot less than what these idiots are paying.

Much less, but they are collecting "mint" equipment with no alterations.
I'd dearly love to have the *mint* HT33B I had 20 years ago. There wasn't a
mark on the cabinet and it was spotless inside. It would also put out the
legal limit defined today and do it class AB1.

> I have a
> >Johnson 500 on AM and it's an ok unit, but not new in the box. Does it
> >work? Yeah. So what? This is exactly what we are NOT about!!! We are
> >screwing each other over some bullsh*t piece of equipment.

Not really. Somebody gets screwed only if they are unhappy with the
transaction.
If some one is willing to pay a couple thousand for a really nice antique

and are happy when they get the rig...then no one "got screwed". The sad part is that other hams see those high prices and think just because they have the same model it must be worth just as much under all that smoke residue, dust, and rust.

>> Is that what we
> >were 20 odd years ago, and before ebay? Nuts! Collectors of old ham gear?
> >Pristine? Why? Work it, play with it, fix it, use it, and enjoy it!!
>
When I finish up with it, most of my old Hallicrafters gear will look close to new, with a few exceptions. Transformers where the humidity has deposited a layer of rust can be cleaned up and touched up, but corosion on the chassis is a different matter.

> Why buy a restored 57 BelAir covertible if you can buy a wreck at the junk
> yard and fix it up?

Because I like nice old cars and hate to work on them. Did enough of that when I was young.

It also takes a lot of skill (and many hours) to make an old wreck look like a new car.
Friend of mine just did that with an old Chevlolet and it cost him more than a new Cadillac.He also did all the work himself.

Particularly if you don't want to use 40# of bondo. The goal is to make it look and run like new with no modifications. It's difficult enough to match the paint color and texture, let alone clean up the chassis witout leaving marks, or to replace the electrolytics and leave solder joints that look original.

> Since a used Yugo will get you to the grocery store, I
> guess you'd have to be nuts to buy a new S Class Benz, right? I'll go out on a
> limb and bet you don't have one of those either.

> Nobody screws anyone on eBay. The buyer sets the price, not the seller.

I don't think I'd go quite that far. There is a lot of stuff on there that isn't quite as represented. There are just enough differences in the way things are described that the purchaser can receive less than expected even after thouroughly questioning the seller. Then there is stuff that is downright missrepresented.

BUT I don't think e-bay is any worse than going to the swaps around the country. Most sellers and purchasers are honest. There are just enough of the other kind to keep us on our toes.
>
What I like about swaps is that with the old boatanchors, I can look at how clean they are, the over all mechanical condition, and usually fire it up to

see if it gets power. Whether or not it works properly is another matter, but with the boat anchors most things are quite easy to fix...even if those two dollar tubes now cost $15 to $20.

The ones I avoid are the ones where someone has etched their drivers license number right into the chassis. That drops the value by half in general and by 3/4 for me, meaning I'm not really interested in one of those if it is otherwise spotless, except for parts

Ahhh...you did realize that poodles were at one time retrievers?
The breed still has much of the hunting instinct even if they do look
rediculous. Let 'em grow some hair and you might be surprised.

Guy I worked with had a retriever and his wife had a poodle. One day he
went duck hunting and as his wife was gone away he took the poodle along,
figuring it'd set in the blind with him.

he downed a duck and sent the lab after it. The Poodle took off and dove in
right along with the lab. So...he let them take turns the rest of the
afternoon.

He never did say how he got all the mud off the poodle before his wife saw
it. <:-))

At leat I think it was.
Currently, most of the stuff is going for quite a bit less than it was
around the first of the year. That and there is less of it.
Sure there are some really outstanding pieces that are still pringing top
dollar, but not many.

If you follow the auctions closely there has been a tremendous upswing in no
bids, or reserve not met, for a lot of the stuff that was going fairly high.

I saw one rig on there three times in about the last month and a half. The
first two times there were no bids and the third time it still didn't make
reserve. he'd been coming down each time on the price too.

They pretty much peaked "on average" around the first of the year, but if
the stock market even makes a reasonable recovery they will be right back up
there.

> Despite my awareness of these facts, I regret not being able to afford

> collections.

I'd say that on average they have dropped about 30% so far this year, but
the only thing bringing them down is the stock market. A lot of the money
was coming from the tech sector and they lost their shirts.

Let's just say I'm happy that I believe in diversafication.

Ok, so much for stereotypes. Although I'm not the proud owner of any
primo boatanchors, I know some who are and the thought of plugging in
one of their 'poodles' sends then crazy.
But, the point remains that thats a facet of the hobby. To each his
own. I guess I just hate to see a nice radio sitting on a shelf just
for the sake of 'being there'.

Interesting comment. I mess with alot of old 20's coffin radios and autographing seemed to be in vogue back then much like the 70's, although they did it in pencil. I go to extremes to PRESERVE that little bit of the radio's history when I'm doing a refurb. Maybe "SS#332-94-8823" will someday be equally as interesting as "Geo. Kimball, 1GK, York, Maine - July 27, 1926" when found inside a vintage radio.

Rgds,
Bill M

It's less than a week away...

On Saturday, May 12th, 2001 the CC-AWA will
host it's annual "Spring Swap Meet"
at the North Carolina Transportation Museum,
"SPENCER SHOPS ".

This is a really nice museum with an operating Steam
powered train, a working "Round House",
and lots of interesting exhibits.
Bring the entire family.

The Swap Meet starts as soon as the Museum opens at 9am. It will be in the
picnic area under the shelters.

The admission to the museum and the Swap Meet is
F R E E !!!!

Everyone is welcome, you do not have to be a member of the CC-AWA to take
part in this or any other CC-AWA sponsored event.

Spencer Shops is located in Spencer NC, just a short distance north of
Salisbury NC, and just off of I-85 at exit 79. Look for the large brown
signs that will direct you to the North Carolina Transportation Museum,
"SPENCER SHOPS".

Remember Spencer Shops doesn't open until 9am, there no need to get there
early.

Howdy

For Sale: Phillips JAN 5763 NOS

Tested and matched on my calibrated TV-7D/U tester. These tubes are New-In-Box and very new looking and testing. Perfect in all regards.

Matched quads (4 tubes) for $15 per set, plus postage. Postage is USPS Priority Mail only (no handling fee). Foreign orders welcome, shipping will be by Small Packet Air Mail.

These tubes are all strong testing and each quad measures within 1 point of each other on my calibrated TV-7D/U.

These are Phillips ECG, USA, white box. Box says 8/85 - perhaps some of THE last tubes made in America??

I guarantee these tubes to test new or your money back.

Here is a picture of one:

4253. SP-600 on the bench

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-05-06 18:46:13 UTC
From: jkjsysadm@aol.com
Message-ID: <20010506144613.19128.00002664@ng-cf1.aol.com>
Source record: 53712

My SP-600 is not where it's supposed to be, instead int's on the work bench.
It has a bit of a problem with the dial calibration on the 1.35 to 3.45 Mc
band withe the end points set WWV 2.5 Mc comes in at 2.6 Mc.
I am unable to get the Hf osc tro track the dial markings. The other bands are
fine. I can Calibrate them to closely track. Any Suggestions.

A seperate issue is the tuning dial is slipping. I've cleaned the "brass drive
roller"
on the dial shaft and the the shaft and the pinch roller the drives the
bandspread
dial. The pinch roller spring seems to be ok and providing enough tension.

I can move the bandspread dial by hand easily. I would like to avoid
dismantling
the front panel. Any suggestions for getting this slippage to go away.

Thanks

Jim Jackson

Source record: 53715

I have for sale a Heathkit SW-7800 Communications Receiver. These receivers were sold in kit form by Heathkit in the mid 1980s to the early 1990s. They sold for around $350. This one is nicely built. It has a few scratches on the cabinet and panel, but not bad. The receiver has a Digital LED Readout and operates from 120 Volts or 13.8 Volts. It covers from 150 Khzs to 30 Mhzs and receivers AM, CW, SSB, Ritty. It has AM, SSB, and CW filters. It sounds really good on AM and does pretty good on SSB. Everything works fine. I have no manual. Price is $175. Thanks, Charlie Hugg, K5MBX

Additionally, speed limits in many places are arbitrarily set
low. The USA population routinely exceeds highway speed
limits and the police don't care one bit.

Cheers,
Bill K2UNK

And for most people, they are speeding just staying with
the flow of traffic on American highways. Interstae 80 in NJ
is 55 for 30 miles before NYC. The AVERAGE flow of traffic
is usually 65/70 or higher. Anyone doing 55 is (or should
be) in the extreme right lane.

See thats what people don't understand a speed limit is a maximum not a minimum.

It should go like this

55 <55 <<55

not

>>55 >55 55

People hitting 70+ should be the ones getting off teh road and having their heads checked.

No it's for revenue enhansment. The cities need the money and most
cities use "traffic" for generating money as a lot of it isn't paid
for by residents. GOD help you if you violate in Royal Oak,Mi as they
have a brand new court bldg that is NOT paid for! Royal Oak police
allowed a video to be made once and it was broadcast, the sargent is
giving the beat cops hell so they will PRODUCE more. $$$

WHY? Do you believe for one second that the speed
limits on American highways are realistic? Do they have
any resemblemce to reality. Is 70 mph across Kansas
logical when there is visibility to the horizon, light traffic
and not a bend in the load for miles ahead?

Cheers,
Bill K2UNK

The intrastate highways were engineered for 70 mph even in the city,
and I do miss the days of "no speed limit zone". Problem is with fuel
economy, doing away with frames, lawyers and millions of idiots who
can't control there machine at speed.

I hope the load doesn't bend... That would make it useless to the
receiver, and the shipper might get a little peeved.

4286. Re: SP-600 on the bench

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-05-07 13:26:15 UTC
From: doran platt <doran.platt@noaa.gov>
Message-ID: <3AF6A277.EE22C091@noaa.gov>
Source record: 53545

Contrary to one of the replies you got, the SP-600 doesn't have hetrodyne crystals for each band. It only has one and that's for dual-conversion. I'd suspect that you have a single band oscillator module bad. If you turn the receiver over and remove the bottom plate, you'll see a bunch of ceramic clip-in modules. Look in the book and get the p/n for the suspect module. It will be a 6-digit (as I recall) number and will be printed on the module, in plain view. The oscillator modules are the ones closest to the front of the receiver. Using a long-nose pliers, carefully rotate each clip sideways to un-snap it. Remove the module and inspect it. (make sure its the right one installed, too!!! hi) I had this problem.
If it were all the dual-conversion bands involved, I'd replace the conversion oscillator crystal. As an aside, I had an unusual problem. I could not cal the band that had 20 meters (I thought). In reality, other bands were affected, too. My problem was that the fixed crystal oscillator box switch was not opening all the way and was addind a bunch of extra cap. in the circuit. I realigned the front panel switch (actually the actuating arm) and all was OK. Good luck with your unit. de Jeep/K3HVG

Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors

I have recently purchased a "Crystaligner" manufactured by Monitor Products (essentially a LF marker generator) and am now seeking a copy of the instruction manual. Any leads will be appreciated. This is not a common piece of test equipment so please don't recommend the "usual" sites unless they actually have a copy of this manual available.

Norman

4289. PLEASE CHANGE THE HEADER WHEN CHANGING TOPICS

PLEASE CHANGE THE HEADER WHEN CHANGING TOPICS
I opened up several posts today and the topic dicussed had nothing to do
with the header.
AND neither the header or the topic had anything to do with boatanchors.

Come on folks - lets respect the Use Group Guide Lines at URL:
http://faqs.jmas.co.jp/FAQs/radio/personal-intro

AND FOR CRIPES SAKES __ CHANGE THE HEADER WHEN YOU CHANGE TOPICS.
I just read one with a header of "freebander" nonsense and it was
discussing FM Quieting!!!

Source record: 53556

I have a nice HRO50T1,9 on a scale of 0 to 10. The noise limiter
is not functioning due to the switch on the control. Otherwise, this
receiver works well, with coils A through F.
The E and F broadcast coils sre somewhat hard to find. I will not
ship this radio. I can bring it to the Pricenton Illinois hamfest
on June third. The price is $575.00 and includes the matching
HRO speaker. If you are not satisfied, you may return it or I
will meet you half way or I'll come all the way to pick it back up.
I will not sell the E and F coils separately.

From: jim breeyear <jbreeyea@zoo.uvm.edu>
Message-ID: <3AF6E6F4.40DDD94C@zoo.uvm.edu>
Source record: 53547

Thanks to all the suggestions I got on my meter problem.
I solved it by replacing a few low wattage resisitors in the B plus
string going to the 6AU6 screen / meter ckt to higher wattage. Some had
changed value. The biggest change came when I replaced both 6AU6's. Very
sensitive on all bands except 10 meters and I suspect the L.O. injection
voltage might be low.

I don't have a problem with occasional test messages turning up
in any of the news groups, but you should know about the NG
called "alt.test". You can send messages there all day without
anyone complaining. "alt.test" also has the advantage of
auto-responders. When you post on "alt.test" the auto-responder
extracts your email address and responds. So if your trying
to make a anti-spam header, it would make more sense to test
it there.

If you can trigger an auto-responder, then your news reader is
probably working correctly.

If they can overtake you on the wrong side, then you have NO business sitting in the middle lane. There are no 'slow' and 'fast' lanes on British motorways. The Rule of the Road applies - you 'drive on the left and overtake on the right'. If lane #1 is clear, you should use it, no matter how fast you are going (provided that you are not constantly having to move into lane #2 or #3 to overtake). It is not your job to try and be a policeman, and create an obstruction by driving at the legal limit in the middle of the road.

Anyway, Walt, you used to ride a motorcycle. We car drivers KNOW that motoring laws don't apply to motorcyclists. When did YOU ever stick to the speed limits???
Ian. ;*)

PS
I think that the UK motorway limit should generally be 80mph (but rigourously enforced) but, in built-up areas, as low as 10mph where conditions call for it. Unfortunately, in the UK it is very difficult to put in place a limit of less than 30mph (I think it takes an Act of Parliament, or even an Act of God).

Well think of the logistics. The average officer gives out what 10 tickets a day around 75$ a pop. 750$. Now his salary is 240$ a day. He will probably pay 50$ in gas for the touring he does. Administration as well is probably another 100$. So figure after all that he clears 350$. That is being very generous. In bumwad idaho (not an insult just my way of saying nowhere) they proably have 2 cops out per day and chances are they will split those 10 tickets between the two since population is small. Now the police pay 800$ a day for that 750$ income from tickets ... tell me where that makes sense that they do it for the profit ?

Tell me how its a bad law ? People speed, simple physics will tell you that that increases kinetic energy and momentum thus increasing stopping distances. People already don't leave enough room at the slower speeds and keep the same distances at the faster ones. So not only were they doomed from the start before they started speeding since every accident that could happen with buddy in front would result in them being involved, but, now their stopping distances are even greater and they will impact with a higher velocity.

First off its law. You hams don't like those cb'ers breaking the law because of some little arbitrary thing like needing a licence to operate (having the sheet of paper does not make you a better op) but yet you find the "arbitrary" speed laws rediculous? They are there to lower the risk of accidents. Car's do not handle as well at the higher velocities, reaction times are required to be far faster etc etc etc ... They do have engineers and such who do determine hte maximum velocity that is safe on a particular road given its conditions or give it the max of 55 (its 65 now isnt it ?) since that is about what the average driver can safely handle.

Back in the early 1970s Doug Blakeslee W1KLK (IIRC)
did a head-to-toes rework of the the old Gooney Box.
One of the changes was the inclusion of a small FET
preamp to improve the RX performance.

If you can find the QST magazines on CD from that
era, you should be able to locate the article.

Message-ID: <aOHJ6.214$cT1.33353@newsread1.prod.itd.earthlink.net>
Source record: 53572

This is the big one and it looks practically new. It is rated at 1 KW AM. It would probably handle over 3 or 4 KW PEP. The cleanest on I have seen. It has a built in antenna changeover relay and receiver muting ability. It has the out board coupler and the meter built into it and the original manual. There are a few small nicks in the paint on the top, not bad. The front panel, knobs, and meter are perfect. Price is now $375 plus shipping from 79602.
Thanks, Charlie, K5MBX

4316. Lowered Price on Heathkit SW 7800 Receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-05-08 01:27:39 UTC
From: Charles Hugg <chashugg@earthlink.net>
Message-ID: <fYHJ6.237$cT1.36313@newsread1.prod.itd.earthlink.net>
Source record: 53574

I have for sale a Heathkit SW-7800 Communications Receiver. These receivers were sold in kit form by Heathkit in the mid 1980s to the early 1990s. They sold for around $350. This one is nicely built. It has a few scratches on the cabinet and panel, but not bad. The receiver has a Digital LED Readout and operates from 120 Volts or 13.8 Volts. It covers from 150 Khzs to 30 Mhzs and receivers AM, CW, SSB, Ritty. It has AM, SSB, and CW filters. It sounds really good on AM and does pretty good on SSB. Everything works fine. I have no manual. Price is $145. Thanks, Charlie Hugg, K5MBX

It is bad law because people do not want the government
telling them how to live their lives and to what degree of
risk they can/should afford themselves. No one is mandated
to drive 70 MPH. If you don't want to drive a that speed,
then don't.

>People already don't leave enough room at the slower speeds and

Sign up with the Naderites then and push for a rollback
of highway speeds if you feel so strongly about it.

Cheers,
Bill K2UNK

>The intrastate highways were engineered for 70 mph even in the city,
>and I do miss the days of "no speed limit zone".

They were engineered for 70 when cars of far less technological
ability as to road handling were the norm. I-70 across Kansas
could easily sustain speeds well over 70 today even though the
road itself was engineered years ago.

>Problem is with fuel
>economy,

Fuel economy is an issue that impacts only ME. It is
none of the gov'ts business if I drive in a manner that
costs me fuel economy.

>doing away with frames,

Actually, todays "frameless" cars are better than those with frames in
the same accident.

>lawyers and millions of idiots who
>can't control there machine at speed.

Few speeding accidents ever involve other cars. Most
accidents are caused by non-speeding factors (alcohol,
reckless driving, etc.).

Cheers,
Bill K2UNK

More that they are there to garner revenue.

>Car's do not handle as well at the higher velocities, reaction
>times are required to be far faster etc etc etc ...

If YOU can't handle it, then don't. No one is forcing anyone to
drive 70.

>They do have engineers
>and such who do determine hte maximum velocity that is safe on a particular
>road given its conditions or give it the max of 55

Nope, the national 55 in effect for some 15 years had NOTHING to do
with safety when imposed. Since it has been lifted, highway detaths
per year are STILL dropping.

>(its 65 now isnt it ?)
>since that is about what the average driver can safely handle.

Many states it is now 70 or even 75. In NJ people routinely
drive 70-75 everywhere on the highway...totally ignoring
the posted 55 or 65 limits.

Cheers,
Bill K2UNK

Still doesn't stop that idiot who is going to end up losing control of his car because he feels he should drive whatever speed he wants (since there wouldn't be any limit for him to abide by) and then crashing into my car. See believe it or not, MOST laws are there for the protection of OTHER people, not the offender.

Ya can't drive drunk under law because you are a danger to others, not yourself.

The amusing thing is ... the laws you do enjoy are exactly that. You know
like: murder, rape, robbery, assault, stalking, etc etc etc ....

The laws are there because the average person is too stupid to realise just
what is good and what isnt

My ability to handle the road is irreevant. Fact is there will be 10 idiots out there that will take full advantage of a no speed limit idea that can't handle the road well at 65 let alone 70+ and end up killing off a great deal of the population ...

> Nope, the national 55 in effect for some 15 years had NOTHING to do

This is from an estate.....

The pair - in very clean cosmetic condition is available for sale. I have not applied power to them but the SK's widow told me they worked when he took them out of the ham shack and replaced them with a transceiver several years ago. Workmanship of builder appears to be very good. No burn or scorch marks. Includes original manuals. The asking price is $400 for the pair. Prefer local pickup in the Boston area. If interested please reply by e-mail and I will put you in touch with the seller.

73,

Michael

4340. FS: Millen Grid Dip Oscillator Plug-In Coils

I have a fairly nice Zenith Trans Oceanic 600 series radio with the black leatherette case and the slide rule dial. This one's in need of some minor restoration including a new dial cord but it is complete and all original.

I am asking $85.00 plus UPS for this fine piece. If interested please reply by e-mail.

I don't remember "bama" ever being at "bama.com". But my memory
isn't as good as it use to be. A quick search on "http://www.yahoo.com"
looking for "bama" pulls up the web site right on top.

The correct address is "http://bama.sbc.edu". That address,
"bama.sbc.edu", also works for anonymous FTP access via the
command line.

I prefer the command line access because, with the web browser
connection, they will often deny you access half way through
your download. This is because "bama" has a very small limit
for the number of connections. A web browser must re-establish
the connection every time you navigate a link to another directory,
or select a document for download. If someone else connects in between
your mouse clicks, you can be denied access. Once you are initially
logged on, a command line connection never refuses you access, unless
you let the connections idle for to long.

Face it, George looks like a monkey and is dumb as snot. As bad as Clinton was, and as slug-like as Gore was, the republicans are so bad they can't honestly win against them. Think about that!!!!

A top republican in Atlanta that was heading the impeach Clinton movement resigned recently because he was caught (a second time) exposing himself in a public park...and soliciting sex from an undercover policeMAN (not police WOman).

Republicans are more likely to have sex with Yasser Araofat and his male camel than women. Like they did with congressional pages.

How about some technical data proving your claim about republicans not liking to have sex with women? Statements like this cast a 'lot of doubt' about your abilities in other areas, such as electronics etc. I mean this is such obvious bullshit, it makes me wonder if your learned comments on other things might also be bullshit!

And yea, I'm a new republican, got so disgusted with Clinton and company, I changed parties, and I still like women!

I presume you still support Clinton and hold him in high regard. He was such a outstanding example of a President of the United States, wasn't he, ugh! puke! I don't know about you, but I was totally embarassed and ashamed to have him represent us/me to the entire world...!

And since we are on the subject of headers:

It is time for my monthly disclaimer, in case any newbies have arrived
since Leland's last folly with my nic and email.

.
KC8LDO Leland C. Scott forged the original post, it wasn't me. His
number of aliases and forged posts and emails are staggering, but he
especially likes forging me. Please check the headers. Leland C. Scott,
KC8LDO, and Doug Adair, N8wwm, and their many, MANY aliases are
responsible for ninety five point nine percent of the strife on the
rec.radio.cb ng, and probably on many of your amateur forums as well,
especially lately. A good number of posts appearing with no call signs
have been easily identified as the same forgers in the cb ng.

Thank you all for the replies via email, as most were polite and well
written, as were the many offers to assist me in attaining a ham
license, however, I believe in returning things to their rightful
owners, so any additional correspondence should be directed at the
author of the forged post and troll.

After exposing Leland for forging me over a month ago with the
assistance of another licensed amateur, he has waged a personal vendetta
against me.

He searched the web and found an article I wrote on freebanding for a
hobby magazine over a year ago and has posted it numerous times in an
effort to justify his own behavior towards myself and other cbers. He
draws his own inferences and hurls unfounded accusations and insults.
Leland's main line of defense has always been attack his accuser, no
matter who it may be. If anyone would dare suggest Leland may be wrong,
he has no defense other than to attack about "What you did" and it is
usually a lie (from questioning one's sexual preference to threatening
them).

He has repeatedly accused me and others of pirating on amateur frequencies, and nothing could be further from the truth. I understand how an amateur could feel so strongly as to defend his allocated frequencies, but attacking countless individuals behind phony names, forging people, forging email headers in his posts, throwing accusations left and right and refusal to remove anything personal and not on subject off the ng exemplifies what this particular individual and his two cronies are about. He also reported me to my ISP for "forging" (the gall) and was so certain it was me that he made many posts threatening that I was about to lose my internet service. When he received word it wasn't me from my ISP, this sent him into a rage, as it did when I first exposed him. He has accused me of forging for so long (pot, kettle, black) he now accuses my ISP of "lying" to him. I guess the more Leland decides to forge me in your amateur forums, the more frequent I must point out the error of his ways.

I asked Leland and "Sparky" to take whatever personal problem they may have with me to email and I will be glad to debate whatever merit they see fit, but as all will see, these two are more interested in calling names, perpetuating problems between operators and will not cease their childish games....hence the crossposts They don't WANT the strife to go away. I apologize that they feel the need to make you all a part of it, and I was going to ignore most of the emails and what was forged of me, but then the email I received from amateurs was so far from what I expected. Leland forged me and posted that article in a manner to which I would be flamed, and instead, I received email from a great number of amateurs who didn't flame at all.

Quite the opposite, many offered to assist in getting my ticket, and for that I thank you. Turning the tables, if it had been me that were a licensed operator and someone posted an article about freebanding in an amateur format I frequented, I may have been one of the flamers, but as I said, the reaction from amateurs across the land was quite different than what the original author intended. If a post appears to be from me in anything other than the cb ng, please check the headers....if it has any other path than this one, it is a forge. All emails answered. Have a good day.

>Statements like this cast a 'lot of doubt'
>about your abilities in other areas, such as electronics etc. I mean this
>is such obvious bullshit, it makes me wonder if your learned comments on
>other things might also be bullshit!

What is BS about it?

1.) Bush looks like a monkey

2.) We had a problem in the House and Senate with congressmen and
senators having sex with pages

3.) The Republican heading the "let's get Clinton" group was arrested
TWICE for exposing himself in a park and for soliciting sex with a
male undercover decoy in an Atlanta park

>And yea, I'm a new republican, got so disgusted with Clinton and company, I
>changed parties, and I still like women!

Good for you. We really ought to throw all the bums out.

Before someone whines about Clinton, we should insist he not have an
extramarital affair himself. Before someone heads a crusade to
prosecute someone else for banging a 21 year-old-female and lying
about it, we should make sure he isn't "hanging out" in public parks
trolling for young males.

>I presume you still support Clinton and hold him in high regard. He was such
>a outstanding example of a President of the United States, wasn't he, ugh!

>puke! I don't know about you, but I was totally embarassed and ashamed to
>have him represent us/me to the entire world...!

Frankly, both parties embarass me. I'm ashamed of many of them, and
embarassed that people think either party does not have more than its
fair share of dishonest members and even the occasional pervert.

Why on earth would anyone think that a certain party affiliation means
the people are honest or moral?

We let them all get away with far too much.

Now think about this...it is important. As bad as Gore was...and as
disliked as Clinton was....the best the Republicans could do was Bush.
They fielded a candidate that actually LOST the popular vote to
someone like Gore!!!! Phew!

Embarassing, isn't it?

A 32V3 in decent working and cosmetic condition is probably worth about $500.
In excellent shape, it could go for as much as $1,500. Use your judgment.

W3DEF

P.S. I have a 32V2 that has been thoroughly restored, and I wouldn't take less
than about $1,200 for it, if I were going to sell it.

Well I may have 'poor reading skills' but I take issue with you painting all people of a certain grouping with the same paint brush about their sexual perferences...There are wierdo's in any group, but not the whole group, and there is a hellva difference between Joe Blow congressman or anyone else and the President of the United States..No matter what, the President should keep him or herself above reproach in all matters, or at least be decrete about it for crying out loud and then lying about it on the national media, sheesh! To much!!!

As for ....the best the Republicans could do was Bush. They fielded a candidate that actually LOST the popular vote to someone like Gore!!!! Phew!...the last I heard on the evening news was that 'all the big time newspapers' that paid to finish the recount down in Florida, much to their chagrin, finally admitted that Bush won anyhow no matter how Gore and company tried to slant it!! As a note of interest, I didn't vote for either Bush or Gore, my candidate lost out early on....!

Take a hard look at what Dubya is doing/not doing with the oil companies right now, think back to what he had to say about the oil business during his campaign, and then take a look at the the modern Bush oil pricing structure. Now, aren't you proud to have voted for such a guy? I didn't think he could sell out in such a short order, but I underestimated the fool.

And since we are on the subject of headers:

It is time for my monthly disclaimer, in case any newbies have arrived
since Leland's last folly with my nic and email.

.
KC8LDO Leland C. Scott forged the original post, it wasn't me. His
number of aliases and forged posts and emails are staggering, but he
especially likes forging me. Please check the headers. Leland C. Scott,
KC8LDO, and Doug Adair, N8wwm, and their many, MANY aliases are
responsible for ninety five point nine percent of the strife on the
rec.radio.cb ng, and probably on many of your amateur forums as well,
especially lately. A good number of posts appearing with no call signs
have been easily identified as the same forgers in the cb ng.

Thank you all for the replies via email, as most were polite and well
written, as were the many offers to assist me in attaining a ham
license, however, I believe in returning things to their rightful
owners, so any additional correspondence should be directed at the
author of the forged post and troll.

After exposing Leland for forging me over a month ago with the
assistance of another licensed amateur, he has waged a personal vendetta
against me.

He searched the web and found an article I wrote on freebanding for a
hobby magazine over a year ago and has posted it numerous times in an
effort to justify his own behavior towards myself and other cbers. He
draws his own inferences and hurls unfounded accusations and insults.
Leland's main line of defense has always been attack his accuser, no
matter who it may be. If anyone would dare suggest Leland may be wrong,

he has no defense other than to attack about "What you did" and it is usually a lie (from questioning one's sexual preference to threatening them).

He has repeatedly accused me and others of pirating on amateur frequencies, and nothing could be further from the truth. I understand how an amateur could feel so strongly as to defend his allocated frequencies, but attacking countless individuals behind phony names, forging people, forging email headers in his posts, throwing accusations left and right and refusal to remove anything personal and not on subject off the ng exemplifies what this particular individual and his two cronies are about. He also reported me to my ISP for "forging" (the gall) and was so certain it was me that he made many posts threatening that I was about to lose my internet service. When he received word it wasn't me from my ISP, this sent him into a rage, as it did when I first exposed him. He has accused me of forging for so long (pot, kettle, black) he now accuses my ISP of "lying" to him. I guess the more Leland decides to forge me in your amateur forums, the more frequent I must point out the error of his ways.

I asked Leland and "Sparky" to take whatever personal problem they may have with me to email and I will be glad to debate whatever merit they see fit, but as all will see, these two are more interested in calling names, perpetuating problems between operators and will not cease their childish games....hence the crossposts They don't WANT the strife to go away. I apologize that they feel the need to make you all a part of it, and I was going to ignore most of the emails and what was forged of me, but then the email I received from amateurs was so far from what I expected. Leland forged me and posted that article in a manner to which I would be flamed, and instead, I received email from a great number of amateurs who didn't flame at all.

Quite the opposite, many offered to assist in getting my ticket, and for that I thank you. Turning the tables, if it had been me that were a licensed operator and someone posted an article about freebanding in an amateur format I frequented, I may have been one of the flamers, but as I said, the reaction from amateurs across the land was quite different than what the original author intended. If a post appears to be from me in anything other than the cb ng, please check the headers....if it has any other path than this one, it is a forge. All emails answered. Have a good day.

I just purchased a pretty nice little atlas 210x at a flea market and
it doesnt transmit at all. I knew that when i bought it however.
Anyways..Im looking for a couple of ideas of what to look for
when i pop the cover. Ive been told possible problem with oxidation
contact(s) between ground and the pcb ground. Also ..there is possible
problem with the main OFF-CAL-RX-TX-CW switch...also possible problem
with the 4 fets used in the switching arrangement..ANY TIPS FELLAS!
I guess the Atlas 210X may be "border-line"--a boatanchor!!

Thats funny as a lifetime inhabitant I have never heard anyone who lived
here call it that. The only "people" I have heard say it are outsiders such
as yourself who have no clue
and mimic what others say.

4380. WTB: Meter leads for an HP410 (or equiv)

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-05-09 01:11:23 UTC
From: n4buq@aol.com
Message-ID: <20010508211123.14764.00001864@ng-ft1.aol.com>
Source record: 53640

Anyone have any leads for a meter like this? One of the leads on mine is missing the tiny point and the locknut that goes with it. I could use a complete lead for the GROUND lead as well.

Thanks,

Barry - N4BUQ

4381. Need: Source for capacitors

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-05-09 01:18:27 UTC
From: n4buq@aol.com
Message-ID: <20010508211827.14764.00001865@ng-ft1.aol.com>
Source record: 53641

Anyone know where I can find a couple of 0.02 mfd with a 500to 600VDC capacitors? I know that 0.022 mfd are available, but this signal generator specifies 0.02 +/- 10%. If I use 0.022, there goes my entire tolerance. I've considered putting two 0.01 mfd in parallel, but there isn't all that much room in this application. I might do it, but it's a last resort.

Also, I'm needing some 0.001 mfd +/- 1% with at least a 400VDC rating. These are apparently very difficult to find.

Bear in mind I only need a couple of each of these, so places with a high minimum order aren't very feasible for me in this case.

Thanks,

Barry - N4BUQ

Not to mention that most states didn't count their absentee ballots
because they wouldn't change the outcome. Most of those were from our armed
forces that voted almost 3 to 1 in favor of Bush, that could have made up
most of the "popular vote".

I will pay $200 plus shipping for a BC-942 receiver
in good/clean/unmodified condition.
Negotiable price for other conditions.

This unit looks like the ARC-5 VHF R-28 VHF receiver,
but has a "U.S. ARMY SIGNAL CORPS" nomenclature tag
and will have other differences that distinguish it
from the ARC-5 model.

Thanks,
Dave Stinson AB5S

Message-ID: <3AF8A9CD.D8760375@coqui.net>
Source record: 53495

Just out of curiosity, I checked a few out of my inventory and came up
with the following:
.00101
.00107
.00104
.00104
.00101
.00100
and for .022s
.0219
.0226
.0217
.0223
.0225
.0277 (an older red-type .02 10% CDE !)

These are garden variety caps (different mfrs) from AES and Mouser with
a 10% listed tolerance spec. Some metallized polyester, some mylar, a
coupla orange drops, all 400 and 630 v. Tested on my DMM which has a
cap measurement function although not assumed to be super-accurate.
I think the point here is that modern caps are darn accurate and I'd bet
even Radio Shack versions are as good!

I'm embarassed at the quality of candidates we get with this system. I
can't understand why some people feel good about barely squeeking past
Gore, like that is a major accomplishment!

We are lucky Jesse Jackson didn't run, he would have probably won.

I don't want to see this point go unchallenged. The vote
in each state is completely tabulated. To say otherwise is
supreme ignorance. Every vote was counted, and was
submitted. It is a fact that Gore won the popular vote, but
it is also true that this is immaterial to winning the Presidency.

Americans do not vote directly for President. They vote for
Electors. The candidate with the most Electors wins. The
popular vote is an interesting count, but has no bearing on
the Presidential election. It is equal in importance, to the
count of voters complaining of constipation, in relation to
those who have syphilis.

Finally, Bush won the Republican party because he had the
most money. There were other good candidates, but Americans
froze them out of the process by not contributing to their
campaign. Both parties received a fraction of the total votes
possible. More than 50% of voting age Americans never went
to the polls. These same 50% always whine about the result.

Yawn....this whole line is a bore... you win Tom, have a nice life with old blow-job BillC!!! I'm gone...!!!

de Jerry -n6jp-

>Your sense of humor sucks as bad as you sense of perspective.
You need to get a life away from thinking Republicans are better
than anyone else..or more moral.

Although it was intended as sarcastic humor, you must be aware
the Republican in Atlanta heading the "crusade" to get Clinton
disbarred for having sex (or whatever) has resigned because he
was caught a second time exposing himself in a public park and
soliciting a young male undercover cop for sex.

Where is Newt? Gone, because he was poking a woman on his
staff.

Frankly, Republicans and Democrats are both very poor examples
of what out public servants should be like. Now go away and stop
bothering me with this silly "Republicans are moral" crap. You can
pretend whatever you like, but don't fault me if you don't like the
>facts.

Oh, it wasn't up to him. It's just that his "friends" in the oil business know that he'll never use price caps nor controls. They couldn't care less that the extortionary oil price increases will be cause of Bush being evicted in four years. No matter- their additional billions will already be banked and Bush will be fully expendible and ousted at the polls, the economy trashed by universal inflation caused by the fuel price increases which impact *everything*.
So in the midst of record high profits by oil companies, and no sign of anything approaching a REAL shortage of petroleum products, just that allegation by those making the profits, prices rise to record levels (by collusion, no doubt). Nary an 'Out of gas" nor "limited to 10 gallon" sign to be seen (as in '73 when there was a REAL shortage).
Just today, radio news sources "within the oil industry" say that now the pipelines are again full, the 'shortage' is abating, so prices should start to come down, "Except on the West Coast and Midwest where there are special circumstances".(?) Of course, "down" will be somewhere around $1.50-1.75, which was exactly the objective of the entire exercise- get the prices up without just raising them "arbitrarily". (gotta have a 'valid' reason.) Fools that the pubic are, they'll never know what happened.

Sure wish we had a real political party in this good ol' USA. The Demoncrats turned out to be fools and the other side, crooks. Oh, the Clintoon admin. was able to work it both ways.

Hi Earl:

Most of the failures of the 210X are the output or driver transistors. When you say no output, does that mean "not a lot of power output" or literally "none".

Can you hear a signal in a nearby receiver? If so, can year hear modulation? Can you hear the relays operate?

The output can be traced easily with a scope. Is it as simple as something like a mike connector? Make sure you try it on cw.

Let me know what you find.

Colin K7FM

Or maybe the reverse. News reports (not generally reported by the liberal part of the media who almost universally supported Gore) say that millions of absentee ballots were NOT counted, ever, some 3 million in California alone, simply because they could not affect the outcome in the state in which they were cast. Absentees historically favor conservative candidates. So it could easily be that the popular vote is never going to be known accurately.

And you may ignore another fact, if you wish, but I live in a state where the Democratic machine routinely steals elections in metropolitian areas, and gets away with it. So it happened this time, too, with plenty pf press coverage that wss unavoidable under the circumstances, and do you *really* believe that the Democratic administration installed by that fact will proceed to do a proper job of investigating?

4396. FS.Argentine (Falklands War) Receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-05-09 09:51:37 UTC
From: "radio-exports.com" <info@radio-exports.com>
Message-ID: <tfi4jhnhhvgn33@corp.supernews.co.uk>
Source record: 53506

For Sale Argentine (War Trophy from the Falklands War) Communications Receiver, Model 8722A.

We have an interesting and unusual receiver,taken as a trophy of war by a British soldier,during the war between
Argentina and Britain.
It is a transistorised Communications Receiver,as used by Argentine Armed Forces at the time of the war.
Frequency coverage is 1.5Mc's to 18Mc's in 4 switched ranges.
The design incorporates Switched Selectivity,BFO,AVC, & Calibration check.
It is fitted with an internal speaker.
The receiver is designed to operate from 12volts DC,either from an external source or from 8 standard 1.5volt D cells,
for which a battery compartment is incorporated in the set.
Apart from some very minor corrosion on the chassis, in the vacinity of the battery compartment,
this communication receiver is in good original condition.
The original metal detachable front cover,designed to protect the controls when the set is not in use,is included.

This receiver is in full working order.

This is an unusual,very well built set,and quite rare.It is a desirable collectors item in its own right.

The price,which includes the cost of packing and air freight to the USA,is just $395 US Dollars.

If you would like more information or wish to order this set,please contact GrahamLeo info@radio-exports.com

Thank you for your interest.

4397. FS: Terminal Boards

Newsgroup: rec.radio.amateur.boatanchors

Hey guys - I have some more brand new terminal boards available!
Perfect for homebrew tube rig construction.

Single section and multi-section units with five turret terminals per
section.

These come in two widths - that is 1.5" and 2.0"
The length is 2.6" per section and they have four mounting holes in
the corners.

These are durable phenolic or fiberglass boards of top quality
construction.

Will sell for $1.00 per section

For quantities available & details, see my web page at:

http://home.cfl.rr.com/happysurfer/boards.htm

I will try to update the pictures tomorrow.

73 to all tube homebrewers!

>
>Ya can't drive drunk under law because you are a danger to others, not
>yourself.

I have no problem with DWI laws. I do have problems where
speed limits are set lower than anyone rationally drives. I have
never suggested allowing unlimited speeds...although there
are certainly highways in the west that can and have had
only "reasonable and proper" as the limit.

The problem is that the safety nazis want everyone to abide by
their version of what is or should be safe. None of that
crowd trusts anyone as an individual.

Cheers,
Bill K2UNK

Hi,

Looking for bids for my Plessey PR-2250 receiver. In excellent condition, including manual. Very, very scarce. I'm selling the unit because I've decided to buy a R&S EK07. By the way, I found a source for these very nice tube receivers; anybody interested ?

Regards,

Herbert

4401. FS Nice Johnson Viking KW Match Box

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-05-09 13:50:27 UTC
From: Charles Hugg <chashugg@earthlink.net>
Message-ID: <DWbK6.1367$Ak7.175654@newsread1.prod.itd.earthlink.net>
Source record: 53511

This is the big one and it looks practically new. It is rated at 1 KW AM. It would probably handle over 3 or 4 KW PEP. The cleanest on I have seen. It has a built in antenna changeover relay and receiver muting ability. It has the out board coupler and the meter built into it and the original manual. There are a few small nicks in the paint on the top, not bad. The front panel, knobs, and meter are perfect. Price is now $375 plus shipping from 79602.
Thanks, Charlie, K5MBX

4402. FS: BC-611 BX-49 crystal boxes

Newsgroup: rec.radio.amateur.boatanchors

From: Nico van Dongen <nico.vandongen@compaq.com>
Message-ID: <yYbK6.48$fi2.1691@news.cpqcorp.net>
Source record: 53512

I have some BC-611 BX-49 crystal boxes. All crystals and coils for 12
channels in the range of 4035 to 5500 kHz.
The wooden box and its content are in fine condition taken in account that
it dates from 1944. There are white plastic tags on the outside of the box
with the channel frequency written on them. The plastic suffers from old age
I reckon and the tags are a bit deformed and curled from where the tags
stick out of the tag holder. Some small pieces of the tag are missing.
Cost is 35US$, shipping to the US is 18US$ extra (shipped economy)

Thanks

Nico PA3ESA

4403. FS: GE LO-BAND MASTR PRO BASE

4407. FS Nice Drake TR4 Station

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-05-09 18:27:57 UTC
From: Charles Hugg <chashugg@earthlink.net>
Message-ID: <N_fK6.2138$Ak7.221376@newsread1.prod.itd.earthlink.net>
Source record: 53516

I have a very nice Drake TR4 Transceiver for sale. The SN is 26727. It has been used very little. I works great on all bands. The cosmetics are very good. A few small scuffs on the cabinet, but not many. It does not need a repaint. Front Panel and Dial and Knobs and Inserts are all perfect. Now the best news. This one has the factory installed Noise Blanker and it really works. It also has the factory installed conversion so that it can accomodate the use of a transverter. Most TR4s that I have seen do not have this feature, although it was standard on the later TR4Cs. This is a very clean, working Drake TR4 and I will sell it for $295. I will include a very nice Drake AC-4 Power Supply with the TR4 for an additional $65 if you need one. I will split shipping costs within the US.
Thanks,
Charlie Hugg, K5MBX

Try my favorite:

Frontier Capacitor
403 South MacIntosh Street
Lehr, ND 58460
1-877-372 2341
email: frntcap@bektel.com

Everett is a fine older gent who is top notch. Sends stuff out immediately. Takes
plastic or will bill you...does business the old fashioned way. All new inventory
of Nichicon, Sprague, others. Radial, axial, OD, metal poly, tubulars, ceramic. All the
high voltage stuff we need for our BAs. $20 minimum order plus $4.50 shipping
and free shipping for orders over $50, however, so buy a bunch. He has a small
catalog that he can fax to you.

OH...BTW, at prices that beat anyone else I know of...surely less than Mouser
or AES. Usual disclaimer...no business interest, connection or anything...just a
happy customer.

Larry, N0XB
Northfield, MN

BTW, with the tolerances for capacitance most rigs allow, I can't help but think
that .022 won't work. My understanding is it's -10% plus 200%! I don't think
you'll have a problem with the .022s. Ask Everett regarding that tolerance thing.

4422. FS: WWII aircraft transmitter (AVT-111) and receiver (AVR-100)

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-05-10 01:14:46 UTC
From: Brad Thompson <brad.thompson@valley.net>
Message-ID: <3AF9EB86.641D6674@valley.net>
Source record: 53532

FS: WWII aircraft "ferry" transmitter and receiver.

According to notes by the MCGP (see reference below), aircraft
were equipped with temporarily-installed communications
equipment for ferrying to frontline airfields. Due to
differences in radio equipment required for various theaters
of operations, it was more cost-effective to install permanent
radio equipment upon arrival. I'm offering two pieces of
so-called "ferry" radios-- and AVT-111 transmitter and an AVR-100
receiver.

The AVT-111 resembles the more-common AVT-112 but has fewer
features. The AVT-111 operates crystal-controlled at 3.105 MHz or
6.210 MHz; two controls select frequency and one of three antenna modes,

and turn power on and off. To tune the transmitter, you remove access
plugs (one original is missing) on the front panel.

The ANT-111 measures 6.25 inches wide by 5.25 inches high by 6 inches
deep (to the tops of the antenna and ground binding posts). Along
with the binding posts, there's a phone jack and a 10-pin male Jones
plug on the rear panel.

The AVT-111's tube complement consists of four 6V6-GT/Gs as oscillator,
power amplifier and push-pull modulators driven by a carbon microphone.
An external dynamotor or vibrator power supply was used (not included).

Cosmeticaly, this radio rates a 6 out of 10, but its interior is clean
and appears to be in very good condition. The missing access plug is
easily replaced with a metal "mistake button". The front panel is
solied, but the lettering is crisp and the red RCA "meatball" logo is
unfaded. The AVT-111's operating condition is unknown.

The AVR-100 receiver is similar to the BC-1206 but smaller
(approximately
4 inches wide by 4 inches high by 5 1/4 inches deep), this panel-mounted
radio
tunes the AM broadcast band, the aeronautical beacon band (200 KHz to
400 KHz)
and also a fixed-tubed frequency of 278 KHz. The tube complement
consists of
the 1R5, 1S5, 1S4, 1T4 (2 each).

Condition rates a 4 out of 10-- there's some rust on steel components
and all of the
paper capacitors and fabric-covered wiring look "fuzzy" with dust and/or
deceased

fungii. The tuning capacitor and other major components appear intact. Includes
external case, which is chipped and has some internal rust.

I'm asking $40.00 for both items, plus postage for 11 pounds to your location.
I'll double-box both items and use styrofoam peanuts as appropriate for packaging.

Please e-mail me if you have further questions or need more information.

73,
Brad AA1IP

Bird has a website and is very good at responding to any inquiry, have you tried them??? They also supply free manuals just for the asking. Just my experience, YMMV.

Not trying to sully your sale here, to be sure, but it's made me curious... I thought the "Clipper" was the nickname for the 7G601, which pre-dates the 8G005(Y) and has the clipper design on the speaker grille (or a bomber on the rarer units) ... someone point me in the right direction or am I correct?
Good luck on your sale though!
Linus

Jim,

The screws used to secure the knobs are removed with "Bristol Wrenches."
A set of the wrenches contains several sizes and can usually be found
for auction on eBay, although there are other places where they can be
found at less cost. (Just use your browser and search on "bristol
wrenches."

Good Luck,

Ron - K5MVR

G.E. Oil-filled capacitors (Non-PCB)

Great for transmitter and amplifier projects.

QTY 1 of each
40 uF at 440V AC - good to about 900V DC.

55 uF at 480V AC - good to about 1000 V DC

Both are 3.5" diameter X 5" tall, and they are later types with no
PCBs in
the dielectric oil.

Will sell for $18.00 each plus shipping

Ywo items from Jane's Reports:

UPGRADE OVERVIEW: USAF plans B-52 upgrades into the distant future.
The US Air Force currently plans to keep at least 62 of its Boeing B-52 Stratofortress bombers operational until the 2038-2044 timeframe. David C Isby looks at the plans that will bring the USAF into 'uncharted waters' when it comes to prolonging the life of a jet combat aircraft.

United Kingdom - Kashmir
- Hackers calling themselves "Silverlords for the freedom of Kashmir" have broken into an internal BBC Monitoring website that links company staff overseas with the main headquarters at Caversham, BBC reported on 1 May. A message in support of Kashmiri separatists was placed on the page, which can only be accessed from inside the company but shares its server with public BBC Monitoring pages. According to a company representative, the incident "did not affect content aimed at clients of the Monitoring Service or any other part of BBC Online."

My Hallicrafters S40A Service Bulletin (about 1950) specifies a standard RMA dummy antenna to be used when aligning the receiver. It says that it "consists of a 200 mmf. condenser in series with a 20 uh r-f choke which is shunted by a 400 mmf condenser in series with a 400 ohms carbon resistor."

What exactly is the reason for using this dummy antenna, and what kind of characteristics does it try to emulate?

You have to remember that most "safety" related laws and rules are written for the lowest common denominator in society. Just because YOU can safely drive a car on a particular road at 70 MPH, does not mean that everyone else can. And since personal responsibility and prudent judgement seems to be at an all time low in this country, we have been more or less forced to have the rules dictated to us. It's a shame for those of us that feel that we're "better" than that, but the law is the law, and you do not have the right to arbitrarily disregard them. Organize a lobby, study and document your evidence as to why a particular law should be changed, and present it to the proper governing body, and let the process do its thing.

I am very much in favor of personal responsibility, and despise the government meddling in my life. But you have to realize that there are a great many peope in this country that are NOT responsible, and do NOT exercise good judgement. It is THESE people that the laws were written for. As long as people demonstrate that they could not behave themselves if left to their own desires, then the government will have to regulate them. This news group is a perfect example of why we need rules and regs. Too many people operate potentially dangerous equipment with little or no regard for other people's rights, yet they are the first to piss and moan when the law bites them. It's hard to make a case in favor of that type of mentality.

Source record: 53395

Here in the UK,at radio-exports.com we have a useful accessory for owners of Racal RA17 and RA117 Receivers,namely, a Racal Pre-Selector/Protector Unit Type MA197.

This accessory was designed by Racal to achieve two objectives:-

Firstly,to bring about a considerable improvement in the front -end selectivity of the RA17 and RA117 receivers, by introducing a high degree of pre-selection.
In real terms,the use of this unit will result in a nearby signal (5% off tune) being attenuated by 80dB's, in the range of 2-24Mc's.A most effective way of sharpening the performance of the RA17 series receivers and RA117 receivers.

Secondly,use of this unit solves the problem of operating any receiver (not just RA17 and RA117 receivers), in the vacinity of high-power transmitters.It will effectively protect receivers from front end damage or even burn out,since it will withstand r.f. signals of up to an incredible 40 volts!

The unit is designed for standard 19" rack mounting.Operation is from either 100-125 volts or 200-250 volts.
It is in good ,original,unmodified condition.We have tested it on air and it is in full working order.

The price for this most useful Racal accessory,which includes the cost of packing and air freight to the USA is $460 US Dollars.

If you would like more information or wish to order,please contact Graham Leo info@radio-exports.com

Thank you for your interest.

Hey folks,

We have a NEW address for the Allied - Knight Kit Bulletin Board!

The old BBS over at BESEEN.COM was being trashed repeatedly by
annoying Taiwanese spammers with totally off-topic ads.

This new Board lets me delete spam, and al;so ban spammers if they try
to register and use the board. The registration is free and takes like
20 seconds. A small price to pay for getting our privacy back!

Many Knight and Allied enthusiasts are out there. Please forward this
to your friends, and to other Search engines, lists, reflectors, clubs
etc.

So please pass the word. KNIGHT KIT LIVES!

Sverre:
Back before everything tried to be standardized to 50 ohms, the manufacturers agreed on the dummy antenna you describe, so that sensitivity measurements could be standardized, and receiver performance directly compared. I think it was supposed to be equivalent to a single wire antenna made of 60 or 100 feet (20 to 33 meters) of wire about 20 feet (6 meters) above the ground.

4446. FS: Collins 75A-2 receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-05-10 21:29:01 UTC
From: gspubl@tca.net
Message-ID: <3afb07fa.262804673@news.tamu.edu>
Source record: 53406

FS: I have a very nice clean Collins 75A-2 receiver for sale. The
front panel is near mint with a very nice
light yellow original drum dial. Unit works fine and is its
original cabinet. The cabinet looks nice too. I
want $750 for it. If interested call Mike at (979) 693-1461 eves
and weekends or email: gspubl@tca.net
Trades for a Ten-Tec Paragon tranceiver, a Ten-Tec Centurion
amplifier, or equivalent would be
considered.

4451. Image rejection for S40A. Was: standard RMA dummy antenna

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-05-10 23:28:45 UTC
From: Sverre Holm <sverre@ifi.uio.no>
Message-ID: <Pine.GSO.4.21.0105110107200.1669-100000@granvin.ifi.uio.no>
Source record: 53411

Thanks for the reply with the background of the RMA dummy.

The next question that comes to mind is whether one should still tune the input circuits using the RMA dummy or use e.g a 50 ohm resistor as a dummy.

The reason I'm asking is because I have tried without success to tune the Hallicrafters S40A for better image frequency rejection in the 20 m amateur band. The problem is that a broadcast transmitter at say 15.1 MHz comes through very strongly at 15.1 - 2*0.455 = 14.19 MHz. I had thought that with a separate RF stage and two tuned circuits at the signal frequency, the image frequency rejection would be OK, but that does not seem to be the case.

Is this problem inherent in the design of the receiver or can I improve it by clever tuning, reduction of RF gain, replacement of the RF or mixer tubes ... ?

Sverre Holm

You're a victim of arithmetic selectivity. With a 455-kHz
IF, the image separation is adequate up to and about
10 MHz or so. This is why double conversion receivers
became popular, and why some sets, such as the
SX-42 and SX-28, went to the extremes of cascading
two RF stages at the higher HF ranges in an attempt
to add more tuned stages and obtain a steeper
bandpass skirt. There isn't much you can do to improve
things--except to use a converter for the 20, 15 and 10
meter ham bands back down to say 40 meters. These
converters were popular projects in the 50s, check
an older ARRL handbook.

FYI on lower speed limits...

The NMA recently received a special report from the Montana Department of Transportation on highway accidents and fatalities. Chad Dornsife, NMA
Nevada Activist, has created a web page that compares Montana's last 12 months WITHOUT a speed limit to their first full year of experience WITH a speed limit.

The new information shows that fatalities have more than doubled on rural
interstates and has also increased on rural primary highways. This information contradicts the state officials who claimed speed limits, higher fines, and more enforcement would lower traffic deaths.

You can find the full story at

And although you may think you can safely drive on a particular road
at a particular speed, you may be over-judging your abilities.

I heard of a survey once that found that something like 90% of people
though they were above average drivers. Now if they were correct, it
means the distribution is very skewed; there must be some REALLY REALLY
awful drivers somewhere. It's more likely that they are just too
confident and can't properly judge their abilities.

The fastest speed limit in most states of Australia is 110km/hour,
which is about 69 MPH. It's fast enough for a legal limit.

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-05-11 20:09:36 UTC
From: yardleyite@aol.com
Message-ID: <20010511160936.26265.00004997@ng-fo1.aol.com>
Source record: 53428

Hello,
My name is Joe - N3IBX and unfortunately I don't have an FM102 board
for sale. I do however have two FT-102's and the AMFM-102 board is in one of
them. I bought one radio just for the board.
I can tell you that you'll be very pleased with it. The audio reports are
excellent on both FM and AM.
The best of luck in locating one.
73 de Joe N3IBX

4494. FA eBay: WW-II era SCR-506/SCR-19A-27 Phantom Antenna

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-05-12 11:36:27 UTC
From: mc@sover.net
Message-ID: <3afd02fd.5133373@news2.sover.net>
Source record: 53453

This is the dummy load or "Antenna A-27 (Phantom)" for the SCR-506 and SCR-193 WW-II US Army Signal Corps radio sets. It is in extremely fine condition - obviously was never used. It comes with a small cloth bag marked "running spares" and contains spare cables and clips. The decal inside the front cover is flawless. The tuning chart on the top is bright white and clean (not yellowed like so many) and indicates the dial settings for frequencies ranging from 2.0 to 4.5 Megacycles. This is a nice clean example of a hard-to-find accessory for a popular WW-II field radio set.

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1236393459

Enjoy!

Source record: 53459

You could purchase modern crystals and solder them inside the FT-243 case. I've done that and it works fine. The specifics on the xtal oscillator may determine whether that would work in a tube rig. E-bay has cheap FT-243's in the non-ham bands for very few bucks.

Source record: 53460

I have a nice Gonset G-76 Transceiver for sale. It covers HF and 6 meter AM and CW. It runs 120 watts Input on CW and 100 watts on AM. It receivers on SSB. This one has the rare Optional Plug In Crystal Calibrator installed. In addition to AC Power Supply/Speaker Console, Model 3349, it has the DC Supply, Model 3350. The DC Power Supply looks like it never has been used. The G-76 and the AC Console are in good shape. The cabinets are good. The Front Panels are Excellent. The Trim Rings need repainting. They look like they have low hours on them. The G-76 receives great. I have not checked it out on transmit. I don't have a manual. I am asking $325 for the package. I might sell the DC power supply separately. Thanks, Charlie, K5MBX

And, you could even bring it to Dayton 2045. Be a bit of walk from the flea market to the airport, but it'd be for the serious BA collector anyway!!

If you get a chance, read "Flight of the Old Dog" by Dale Brown. It's centered around the B-52 "Megafortress". Good read.

Lettsee....I'll be about 90 in 2045...yeah, that give me enough time to get the kids through college and get that multi-engine jet rating.....

Hi

One caveat... Many early transmitters used fairly
substantial oscillators--6V6s, 6L6s, even 807s.
You have to be very careful regarding the crystal
current drawn in those cases. I've had full-sized
FT-243 quartz wafers crack when used with
certain TX designs. FWIW.

Regards

Peter k1zjh

Sorry, I read it as you were asking what they were worth?
For power tubes, try the Eimac or Svetlana sites.
For regular tubes, try to find one of the 1970's era ARRL handbooks. Back
then they had the pinouts and characteristics for just about everything
available.

4515. Old electrolytic capacitor question

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-05-13 03:27:52 UTC
From: n4buq@aol.com
Message-ID: <20010512232752.10134.00003308@ng-ci1.aol.com>
Source record: 53474

I have an old AM/Shortwave radio I'm rebuilding. It was built in the '30s or '40s (not sure). It has three can-style electrolytic caps. I would like to rebuild them but when I cut one of the cans open, a small (30 - 50 cc) amount of clear-ish liquid poured out. In the base of the can is a small amount of thick, milky substance.

Is this stuff hazardous? Does it likely contain PCBs?

When I got the can open, it didn't containt the gooey stuff I've seen in old caps before, but, instead, it was a coil of gray metal with a mesh that lined the inside of the can. The mystery fluid was simply around these metal parts.

The caps have a small hole in the top -- apparently to relieve pressure by the electrolyte (I think) so I would think that if the fluid ever leaked out, it wouldn't be expected to be dangerous, but you never know...

I know this isn't exactly the forum for this question, but I wasn't sure who/where else to ask. Since it's kind-of/sort-of boatanchor related, I thought someone might know about this.

Bottom line, I would like to reuse these cannisters since they are the right size to fit the existing holes, but I'm concerned about the safety of handling/disposing of the innards.

Any comments? I would appreciate some advice.

Thanks and 73,

Barry - N4BUQ

Can someone tell me a source for the pilot lamps which illuminate the band display digits on this receiver (probably other Yaesu equipment as well from the era)?
The manual specifies a 14v/0.65amp lamp

Thanks very much!

4532. Re: Old electrolytic capacitor question

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-05-13 22:31:52 UTC
From: Roger Leone <arleone@inreach.com>
Message-ID: <fZDL6.7014$ca.21867@news.inreach.com>
Source record: 53492

Barry:

Electrolytic caps are usually made with layers of aluminum foil with a thin paste electolyte between them...the ones you described sound more like oil filled caps.

Oil filled caps last longer than electrolytics...were you sure they were bad before performing surgery on them? If you haven't cut open the others yet, I would test them first to see if they really need any attention...they may be OK as they are...

The oil in the one(s) you opened may or may not contain PCB's. The aroma of PCB oil is something like mothballs...either way, if you get any of it on you, wash well with soap and water and don't try to use the oil for cooking food. The problems with PCB oils you probably heard about in the news media involved the use of them for food preparation or lab rat injections. If you don't take it internally, you will be OK. Safe disposal of any questionable material should be at a hazardous waste facility.

You have an older liquid filled electrolytic. They were
extremely common in early 1930s sets. The solution
is most likely borax; it is relatively harmless to handle
or dispose off. Off course, don't ingest the liquid!
Clean the can in warm water, and simply restuff
the empty shell with more modern components.

Peter

HI:
I remember in my far distant youth taking an old radio apart and finding wet electrolytics as mentioned. Do not remember what was in them, but do remember reading in an old book in the library about wet electrolytics. The rolled foil ones had not been invented yet, and the fluid in them was definitely not oil or PCBs. If I remember right, the values of these were 4 to 8UF. Am trying to dig up the info on what exactally the electrolyte was. The ones I disassembled had removable tops so the electrolyte could be checked, replaced, or replentished.

Older electrolytic caps were often liquid filled. That was actually the original design. They were filled with, I believe, a mildly acidic electrolyte which built up the oxide layer when current was passed through it. There were no PCB's. The whitish deposit is aluminum corrosion products.

Barry --

Don't apologize!! It's a relevant topic. Good thread. I've just started tearing into my first 1930's vintage radio (Philco Model 33) so it was particularily timely.

Why would you think it's an intrusion? This is a newsgroup for discussion of old equipment, not a buy and sell newsgroup that it might appear to be from the usual contents. I think you were talking about an old shortwave receiver, and that would be a boatanchor. Once upon a time, someone was as likely to use a general coverage receiver for amateur radio as they would a receiver that only covered the ham bands.

There were other newsgroups that you could have asked the same question, and gotten an answer. One or two of the newsgroups in the sci.electronics.* hierarchy come to mind, though sometimes I wonder how many there are familiar with tube-vintage circuitry. rec.radio.amateur.homebrew would have also been a place to get an answer to this question. rec.antiques.radio+phono would also find people knowledgeable about capacitors in old radios, though they seem more interested in consumer type radios than shortwave. Even rec.radio.shortwave probably would have gotten you an answer.

But your post certainly did not belong elsewhere. It was far more relevant to this newsgoup than a lot of the posts.

Hi Sandy,

Sure did!
Knight offered the Model S-8A Speaker kit for $9.95. It featured a 4
inch speaker and was "specially designed to peak at the voice frequencies."
It measured 6 7/8 x 6 5/8 x 5 5/8 inches.
I'll try to scan it tomorrow and email you the JPG.

This, or Rec.Antiques.Radio+Phono are the forums
for this sort of discussion. Don't appologize for
asking an on topic question, and one that was
of interest to others in the group! It's nice to see
something on topic for a change, compared to the
endless ads which have overtaken most of the
discussion over here.

All the best..

Peter

4571. FS RME 4300 Receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-05-15 03:25:39 UTC
From: Charles Hugg <chashugg@earthlink.net>
Message-ID: <Tk1M6.3823$gc1.413725@newsread1.prod.itd.earthlink.net>
Source record: 53380

FS a complete RME 4300 Communications Receiver. This one is in good condition. The front panel is nice. It has a few spots in the black that have been touched up. The knobs and the dial are original and nice. The chassis is tarnished in spots, but overall in good condition. The cabinet has been repainted and looks nice. Paint color is close to original. The receiver works great on all bands but the 3-4 Mhz Band where it is all static. It has not been modified and looks all original. Price is $165. Thanks, Charlie Hugg, K5MBX

4572. FS Big Johnson KW Match Box

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-05-15 03:31:12 UTC
From: Charles Hugg <chashugg@earthlink.net>
Message-ID: <4q1M6.3843$gc1.414764@newsread1.prod.itd.earthlink.net>
Source record: 53381

This is the big one and it looks practically new. It is rated at 1 KW AM. It would probably handle over 3 or 4 KW PEP. The cleanest on I have seen. It has a built in antenna changeover relay and receiver muting ability. It has the out board coupler and the meter built into it and the original manual. There are a few small nicks in the paint on the top, not bad. The front panel, knobs, and meter are perfect. Price is lowered to $350 plus shipping from
79602.
Thanks, Charlie, K5MBX

4573. Anyone know a Collins 18M-5?

Newsgroup: rec.radio.amateur.boatanchors

Just saw one last night and is it NEAT!

Looks to be just pre-WW2 20W AM/CW HF 2-way (now a transceiver).
Top deck's TX havink 807 w. 6V6G mod.s & PI -yes- net output. Bottom deck
is RX w. tuned RFA, all octal tubes, some top-cappers.

Came fm Charlotte AWA meet & present owner a new ham... who I think
got it 4 about 10 cents on the worth-$

'Bout the size of a giant H-W Bandmaster.

Anyone know more, have a URL, something. Had no luck with web's
Google.

Thanks,

Marty

Message-ID: <3b012f24.666058090@news.tamu.edu>
Source record: 53384

FS: I have one more 450TH tube (had 3) that is brand new in the factory metal framed (for antishock shipping) box. It is an EIMAC tube (new). I want $85 for this last one. This type of tube has the plate cap on top and the grid cap on the side and it stands about a foot tall and makes a great kilowatt amp. I had a friend that ran one so hard that you could see the grid shadow on the plate as it was white hot and it just kept on running....a very durable tube. If interested call mike at (979) 693-1461 (eves) or email to gspubl@tca.net

My Philco 60 article at http://antiqueradio.org/philc08.htm discusses rebuilding this type of wet electrolytic capacitor.

You will find a detailed article about capacitor replacement in general at http://antiqueradio.org/recap.htm .

No problem with posting your question in this forum. It could use more discussion and less advertising!

If you are interested in old radio restoration, you might enjoy the rec.antiques.radio+phono forum.

Have fun!

From: David Pearce <david.e.pearce@lmco.com>
Message-ID: <3B01476A.73E59EB4@lmco.com>
Source record: 53331

Original Johnson Viking transmitter for sale at swapfest lot #3735.

Asking $100 but do want to get rid of it at Dayton. It was given to our small ham club as a fundraiser.

Looks pretty good on the outside, but has some dust inside and is missing the top faraday cage cover under the top cover. Faraday cover is easy to replace as it is only a pierced aluminum sheet. Comes with a Xerox copy of the manual and a plastic dust cover. It has it's own built in power supply and is therefore very heavy.

I have not verified proper operation as I am a recent ham and have not been able to obtain a crystal in a ham frequency to test operation. And the elder hams dumped all their crystals years ago when the modern equipment came out.

So it is being sold AS - IS.

Ask for Pete or Dave (not me) at lot 3735 or 3736.

David Pearce AB0NG

I have a very near mint SB-104A station for sale. It truly a beautiful unit. This one is as good as your going to find. It is very good. The unit is an excellent performer and the receiver is very hot. I get great audio reports on SSB and CW tone is perfect. I use this radio every day and it is my primary rig.

The matching speaker is in the same condition. Very good condition. Power supply is mounted inside the speaker.

The unit exhibits one problem. When turned on cold, the full digital display takes about 10 seconds to fully populate. Typically the first two digits come in instantly, about 5 seconds later the second two digits come on, and about 5 seconds later the last two digits come on. It does however eventually all come up just fine in about 10 seconds. I talked to RTO and they say it is a 5v alignment inside the radio that causes this. I don't want to go into the unit and mess with it. The vfo and receive is not affected by the digital display.

My price $375.00 and I'll pay ups ground shipping to lower 48 states, and double box the units. Cashiers check, money order, or paypal ok.

Thanks, Dave K5FNG k5fng@arrl.net

4588. BA alignment woes S-40A

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-05-15 16:04:53 UTC
From: Bill Meacham <NOSPAMexray@coqui.net>
Message-ID: <3B0153A5.590940C9@coqui.net>
Source record: 53297

I'm trying to fix up a S-40A and having some problem with the
alignment. I've downloaded the "B" manual from Bama and have the
Rider's info for the basic S-40 early/late, but nothing specific to the
"A".
Both seem to indicate to set the Bandspread at Zero...and that normal
tuning would be from the top (high freq) of the band , downwards.
Zero on this one is maximum capacitance of the bandspead tuning cap
(fully closed). Tuning away from zero clearly tunes upwards in
frequency.
Now I'm wondering if somebody has put the wrong dial in it and at which
extreme of the bandspread I should be using for alignment purposes?
Any clues?

Hi Bill,

I had exactly the same problem with my S-40A. The oscillator will not track correctly unless the bandspread is at minimum capacitance. I strung the bandspread cap "backwards", that is, with the cord from the shaft going to the top of the bandspread pulley and the cord from the dial pulley going to the bottom. This also prevented the bandspread cord from rubbing on the main tuning shaft. Worked fine. Hope this is clear.

Frank Dresser

By the way, I am sure I have the original bandspread dial. My uncle bought this radio new.

Hi everyone

I've just added lots of new stuff to my site as below:

Alfa Spider Price reduced.

New receivers added under Amateur Radio.

New test equipment and components added.

New section on Domestic Wireless added.

There's some really nice gear if radio is your "thing".

Check out www.nomis.co.uk/m5poo for details

4598. Re: Need 3 gang 5-23 pf variable cap for HBR proj

this one is listed at Ocean State Electronics in RI.

5 GANG VARIABLE CAPACITOR (2) 10-30PF (1) 10-200PF (1) 10-90PF (1) 7-27PF
THE CAPACITOR BARGAIN OF A LIFETIME

This versatile capacitor can be used for a variety of applications. Each
section can be used separately or tied together for any desired capacitance.
Tie all 5 sections together and you have a quality broadcast variable
(377PF). Very well built. Compact size, measures only 1 1/4"W x 2"D x 1
1/8"H. 1/4" Diameter shaft 1" long. This is the Variable Capacitor to buy
even if you don't need one now. A great value for this versatile capacitor.

I am restoring a 1951 Tandberg Huldra 4 that comes with an EM34 magic eye. My problem is that the magic eye hardly has any glow left. If I turn off the lights and look carefully I can see that it is working correctly.

Does anyone know of a cure for a weak magic eye, except replacement?

You might try http://www.pwdahl.com/

Peter Dahl has, in his computers, transformer specs for thousands of boatanchor ham rigs. Don't know if he does old stereo stuff, too, but you might try an email.

Otherwise, look in the back pages of some of the obscure stereo magazines at the bigger bookstores like Borders, etc... there's a lotta guys out there that rebuild the old Dynacos, and have all sorts of parts.

It is no cost effective to "rebuild" glass tubes.
Metal/Ceramic, on the other hand cost about 60% of new, for rebuilt tubes.

Phil,

Great site! Those are exactly what my cap look(ed) like. I made the mistake of cutting it somewhere near the middle(duh!). I'm going to cut it again at the lower edge and hopefully can put it all back together. Mine don't have the handy-dandy cardboard sleeves, so I'll have to come up with something to hold them together. I think epoxy should work. I'll probably come up with something to attach the other lead to the can's shell - perhaps a spring-type washer that will slip inside the can and make contact. Not sure yet.

Thanks to all the encouragement from the other list members as well. With all the advertisements, I guess I had this list pegged for a "for-sale" or "for-auction" only list.

This radio holds some sentimental value. I've restored the cabinet (about 10 coats of lacquer) and now need to get the innards working up to par again.

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
Sunday May 20th 2001
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >2000 cars!

Buyers admission is $5 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $20 for the first and
$15 for each additional at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

SEASON PASS + Advance Discounts

A sellers discount season pass is available which
offers a 33% discount. See the advanced registration
form below for full seller info.

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Separate lines will form prior to gate opening
for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all

sellers (6'8" clearance).

Talk-in: 145.23- (PL 88.5) W1BOS/R and
W1XM/R-449.725/444.725 (PL 114.8/2A).

From: nvanvonno@aol.com
Message-ID: <20010515215657.27101.00004072@ng-fq1.aol.com>
Source record: 53321

Well, not sure if this qualifies as a boat anchor, although it would useful for fixing 'em. I have a Hickok model 501A power supply with a burned-out HV transformer. Does anyone have a manual or schematic, or know of a likely source? I've done the obvious already. There is a Hickok web site, and it's been disconnected. This is a nice supply, has a low-current C output as well as a 100mA/400V regulated output with a couple of 6L6 pass tubes. It was made by Stark Instruments in Ontario, Canada.

Thanks in advance. Reply to <nvanvonn@intersil.com> or <nvanvonno@aol.com>.

4615. Re: Weak magic eye

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-05-16 02:06:14 UTC
From: nvanvonno@aol.com
Message-ID: <20010515220614.27101.00004074@ng-fq1.aol.com>
Source record: 53322

These tuning indicators usually fail because of degradation of the phosphorescent coating on the target, and when that happens there is not a lot that can be done. Replacements are tough to find, at least in the US where the 6E5 etc. bring top dollar. I have seen a lashup using the 1629 (or VT-138); that's a surplus tube that is more readily available. Its filament runs off 12.6VAC, otherwise it's an octal version of the 6E5. Simple setup, would expect it to work fine; set up a voltage doubler from your 6.3VAC filament supply, rst is as the 6E5. Don't know about the EM34, other than it's a 6.3VAC heater tube....but the basic notion of an indicator with a built-in triode dc amplifier probably worked as well for Philips as it did for RCA.

Hope this helps. Let me know if I can be of further help.

Regards,

nvv [nvanvonn@intersil.com]

Gang:
Just came across a Harvey Radio Labs type 193R, model 47 FM receiver. 85-115 mhz, rackmount. A true boatanchor.

Can anyone tell me where I can find a schemo for this? Have had no luck searching the net.Please email me directly if you can help.

Many thanks,
Mike Zuccaro

Yes Phil. Your item qualifies as a BA in my book. Anything old with
way more bulk or weight that is not consistent with its doing the job
gets the honors. I wonder if my wife thinks of me as a BA?

Source record: 53336

The idea of converting the filament voltage was a good one. I am trying to find another tube which is reasonably equivalent from http://w1.844.telia.com/~u84405432/eyes/magiceyes.htm

The EM34 is equivalent to a 6CD7. It is pin compatible with UM34/12CD7 with 12.6 V filament or HM34 (8.5 Volts). In Norway the price level for an EM34 is around NOK 350 = 40 USD, but unfortunately I don't seem to be able to find any of the other tubes.

However, some other tubes of the same size, but with different pin layouts such as 1629, UM4 (12.6 Volt), UM35 (4 sectors, 12.6 V) I can get relatively cheap. I'll look more into whether they can be used with a simple conversion circuit or not.

Sverre Holm

Gonna go cheap - only a $125 reserve with a $25 bid! Good chance
to pick up a very very nice SR-160 3-band SSB/CW transceiver for
your shack or collection. Uses any PS-150 supply (like for the SR-150).
VERY hot receiver on all bands. Full output on all bands as well.
Clean inside and out, with a very pristine face and cabinet. Take a look!

LOTS of pictures at the above link. Only 2 days to go!

Thanks

Source record: 53341

Hi Gang,

I've decided to mount my BC-779-A receiver
in a rack and now I find that the power supply
is missing the front rack mount panel and the
dust cover.
This is for the RA-94-A power supply.

My receiver is OD green but it will have to be repainted
so it doesn't matter what color the power supply panel is.

Does anyone out there have an extra one laying around?
Or maybe a junker supply you'd be willing to take one
off of?

Source record: 53247

I have got a crazy idea I can convert an APELCO Model 98HF Marine Transmitter to 160 meters. It sure looks solid but overall RF leakage precautions don't seem present. Maybe nobody cared about TVI on the high seas.

I need a schematic to at least judge it to be practical. After all, the chassis has pushpull 807 modulation and a pair of 807's in what looks like parallel for the PA. I don't have a power supply but have at least two old vacuum tube rack mounted supplies.

I have done a web search and come up schematics for Ratheon CB transceivers. I have been unable to get past Raytheons' phone system in Hew Hampshire. My gut feeling is that they have forgotten all about their old tube gear.

Anyone got any ideas who would have a schematic in a dusty file somewhere?

I understand HF marine is still used in the Central America.

Thanks

Charles Days

Charles,
I often see these things and have wondered about converting them. Most later ones seem to be crystal control and fixed-tuned and I have guessed that only an xtal and maybe a bit more capacitance here and there should do the trick. Bear in mind that they were made for 2.0 to 2.8 so to squeeze another 200 kc shouldn't be too hard. I'll be interested in what you come up with.

Bill,

It does have some salt damage but I don't think it got dunked. HEh, Heh, I have an alterior motive. Yes it is crystal controlled, that's good. Uses the old style LARGE crystals. I have the impression that it is not as powerful as it appears. I have an old Stancor 100MB ham transmitter in sad shape, uses push-pull 807's gets 100 watts. When you look at the components overall they seem to be of the appropriate rating. This Apelco seems to have more conservative components. My guess, since it not an amateur rig that is was designed to crank nearly continously, handling radio-telephone conversations but at low power. The motive, push the frequency down to the upper end of broadcast and use it for a local AM transmitter. Whoa, push the power down too, I am hopeing the oscillator has a separate B+, there are two gas regulators so I probably need only to turn down the B+ on the finals. The loading adjustments are not on the front panel so I might have to move them or use a flexible coupling. It is not PI network, from what I remember, HF marine used loaded whips, long loaded whips. There are jacks for metering but there are on the chassis. Again, a panel meter and a switch. It should be easy to get a modulation monitor on it as well. I suspect the audio band pass may not be very wide either, it does seem to be capacitor coupled. The modulation transformer looks about 50 watt capacity.

There is a marine repair shop in New Bedford. I will have to check and see if they may still have a schematic.

Have you considered contacting a marine radio repair shop, maybe Radio Holland in Houston? Sometimes they keep "vintage" manuals in their dusty files.

I've owned two B&W 5100-B transmitters. They are well-built--like tanks--and, with a unitized construction, generally easy to work on. They use a pair of 6146s in the final and as modulators, and all the tubes are still easy to obtain at relatively low prices. The B series were made roughly between 1955 and 1962. They are wired for the 51SB-B single sideband generator, and some of those come up for sale every now and then. I currently onw one of these rigs with the ssb generator, and I've had a lot of fun with it. You'll have to be prepared for some drift on 10 and 15 meters, noticeable only on ssb, but aside from that they're great rigs.

For Sale.Lifeboat Radio Marinetta Type TRP1

This unusual,high quality set,is a special purpose MarineDistress Transmitter/Receiver,
made by Skanti in Denmark.
It is designed to operate on a choice of three International Distress Frequencies,
namely,8364 kHz, 2182 kHz & 500kHz.
The equipment has an input for operation from a 24volts d.c. boat supply.

More significantly, can be operated entirely independently by a built in hand cranked generator, (single detachable crank included),for use by misfortunate sailors when cast adrift in lifeboats, following a disaster at sea.

Controls include band switching,transmit/receive switch,transmitter tune,receiver tune and receiver volume.
The unit will send and receive both voice and cw.
It is fitted with a fully automatic morse alarm sender,and also has a morse key for sending messages by hand.
It comes complete with the correct original microphone and headphones.
Full instructions are fixed to the inside of the lid of the totally waterproof floatation case in which the transmitter/receiver is housed
.
This is a nice piece of unusual maritime radio equipment ,from an age when things were built both to last and to be reliable.An important consideration, if you found yourself shipwrecked and your survival depended on the radio working.

An attractive item for the specialist collector of Marine Radios.
Price,including the cost of packing and air freight to the USA is only $335 US Dollars.

For more information or to order,please contact Graham Leo at UK based info@radio-exports.com

Thank you for your interest.

4653. FS.Classic Rees Mace Communication Rx.

Newsgroup: rec.radio.amateur.boatanchors

For Sale:Rees Mace Communications Receiver,Type BR2169

This is an extremely well made Communications Receiver manufactured by the British company,Rees Mace in the early 1950's.

The receiver uses 12 tubes in a superhet circuit and offers continuous coverage from 55kc,s to 31Mc,s in a total of 8 switched ranges,using single conversion on 4 of the ranges and double conversion on the other 4 ranges.

The receiver is very compact and measures approximately 12" cubed.
The set has a large rectangular tuning dial with the 8 frequency ranges clearly marked and there is also a logging scale.

The set incorporates a very high quality reduction drive to the tuning knob. The ratio of 48:1 makes tuning a joy and the reception of ssb and cw signals very easy,using the effective BFO.

The tube line up is 6BA6 RF Amp,ECH81 1st Mixer/Crystal Osc.,6C4 1st Osc,ECH81 2nd Mixer/Osc or 1st IF Amp,EF92 IF Amp,EF92 2nd IF Amp,EB91 AGC/Det,EB91 Noise Limiter,EF92 AF Amp,6CH6 Audio Output,EF92 BFO and a QS150/45 stabiliser.An impressive line up!

First IF is 1.4Mc's,2nd IF is 460kc's.

The set has four position switched selectivity,the narrow position using a crystal filter.
Other controls include BFO on/off,BFO Tune,AF Gain,RF Gain,AGC,Crystal Switch,& Band Indicator

All in all,this is an extremely nice receiver and a worthy addition to any serious collection of significant quality tube communication receivers.

The receiver is in very good condition and is in full working order.

The price,which includes the cost of packing and air freight to the USA is $495 US Dollars.

If you would like further details or wish to order,please contact Graham Leo info@radio-exports.com in the UK

Thank you for your interest.

I've just completed restoring my 5100B (2nd one I've owned...) and that unitized constructions made it very, very nice to restore, clean etc. You have the main chassis and 4 subchassis that go on top, all connected via chassis plugs. Lots of room to work under the chassis.

There have been some extremely interesting comments about receiver repair here lately. Now I have one that's probably very simple.
To restore it to operation I had to mechanically realign an R390A because a set screw had come loose and it was completely inoperable. I did the best I could but it isn't perfect. Will the electrical alignment compensate for minor errors in mechanical alignment?

John
K4XC >>

MINOR errors possibly, but sensitivity will suffer. Best bet is to drop the front panel (thats the only way to do it correctly) and do a proper mechanical alignment. Then do the electrical alignment.

John....any time you do a "mechanical alignment" it should be followed
by a front end alignment. Also, it wouldnt hurt to do the IF's also.
If everything is working as it should, you'll notice the difference afterward.

John,

I have seen R390A's with the cams about 15 degrees out that seem to work just fine. In fact few if any of the radios that I have looked at had the cams set right (all lined up to the marks with the radio dialed to 7 +000). The easy way seems to be to set the two you can't get to easily as close as you can and then align the rest of the cams to them.

I'd go ahead and align the radio and see what happens. It should work ok.

Message-ID: <Pine.GSO.4.21.0105181021560.10297-100000@granvin.ifi.uio.no>
Source record: 53284

I have gotten several suggestions:

- increase plate voltage

- burn off contamination from the cathode by increasing filament voltage by 50% for 1-2 minutes

- replace by a more available type with 12.6 V filament voltage and use a voltage doubler for the heater.

Now, there seems to be two possible diagnoses: either the phosphorescent coating on the target is degraded or the electron emission from the filament has been reduced.

There are two anodes on my tube, both of which are fed through 1 Meg resistors from a 240 V supply. The plate voltages are much higher than what the schematic says. To me that seems to indicate that the electron emission is less than it should be. So maybe "cooking" of the filament would help?

Comments?

- Sverre

4675. FS: 120V AC Handcrank Generators

Newsgroup: rec.radio.amateur.boatanchors

I have a few more of thes left if anyone would like to try one:

FOR SALE:

Exciting novelty item: HAND-CRANKED MAGNETO GENERATOR!
Produces 120V AC. These will provide about 20 Watts depending
on your cranking speed! The size is about 3" diameter and
3" deep with a retracting handle. Fluke freq meter shows around
20 Hz on one pair of terminals and around 60 Hz on another.
You can mount these behind a sturdy front panel with a single
hole and the large nut provided.
Will sell for $25.00 each plus $6.50 USA shipping

Color may vary from the style shown here:

For Sale: Phillips JAN 5763 NOS

Tested and matched on my calibrated TV-7D/U tester. These tubes are New-In-Box and very new looking and testing. Perfect in all regards.

Matched quads (4 tubes) for $15 per set, plus postage. Postage is USPS Priority Mail only (no handling fee). Foreign orders welcome, shipping will be by Small Packet Air Mail.

These tubes are all strong testing and each quad measures within 1 point of each other on my calibrated TV-7D/U.

These are Phillips ECG, USA, white box. Box says 8/85 - perhaps some of THE last tubes made in America??

I guarantee these tubes to test new or your money back.

Here is a picture of one:

I have a Hallicrafters SX100 with original manual, and an R46B speaker for sale. The SX100 is very clean and works great. However, the bandspread cable is missing. I bought both from the original owner and I have been using it daily for the past 2 years for AM broadcast listening in my office. The R46B is a 9 domestically, and sounds great. $325 plus shipping for both.

I have replaced ALL the paper and electrolytic caps and all the resistors that were out of tolerance...Those who have done this job know the time and effort required...The electrolytics were rebuilt by removing the original caps and inserting new ones thus retaining the integrity of the power supply..The front panel is in very good condition..All knobs are original..The gear train has been cleaned and lubricated and is very smooth in operation...Comes with cabinet and PM 23 speaker..Both could stand a repaint..The receiver has very low sensitivity on all bands and will need some troubleshooting..I don't have anymore time to work on the radio..E mail or call for further details...Lou...(619)437-8351

4697. Program RJELINE4

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-05-19 21:54:42 UTC
From: Reg Edwards <g4fgq.regp@btinternet.com>
Message-ID: <9e6q2p$e2h$1@neptunium.btinternet.com>
Source record: 53207

NOW AVAILABLE, Program "RJELINE4.exe"

FULL ANALYSIS OF PERFORMANCE OF BALANCED-PAIR TRANSMISSION
LINES, 20Hz to 1GHz.

This program is an improved version of RJELINE3.exe. Extra output
data and user operating facilities have been added and the
extensive introductory notes have been rewritten. All the original
facilities have been retained.

Study all types of line from 50 Hz HV power distribution, overhead
and underground phone lines, antenna ladder lines, 100-ohm figure
of 8, to UHF high-power lecher-lines.

Input data is a line specification, Zo, conductor diameter,
dielectric loss factor, velocity factor, frequency, line length.
Also series resistive and reactive components of the terminating
impedance.

Output data is in 3 sections: Line Characteristics, conductor
spacing, R,L,C,G, attenuation, propagation velocity, Line Input
Impedance in various forms, and Line Performance, reflection
coefficient, SWR, actual line loss, power transmission efficiency,
resonant Q factor, etc.

Exact classical transmission line formulae used. Skin and conductor
proximity effects are taken into account. DC and AC conductor
resistance can be compared and observed to diverge with increasing
frequency and with closer conductor spacing.

Applications:- Transmission line design and design of line
transformers intended for complex terminations R+jX. Educational.

This program has been produced to the highest standards. Use it to
check accuracy and reliabilty of other transmission line
calculations and calculators.

Program size 75.6 Kilobytes. Download RJELINE4 in a few seconds.
Not zipped up. Run immediately.

4713. FT980 Audio Distortion LSB Only!

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-05-20 08:46:24 UTC
From: Ned Collins <lucille@gofree.indigo.ie>
Message-ID: <atLN6.957$Fk7.6577@news.indigo.ie>
Source record: 53223

Hi Reader!

Problem on my FT980. Audio distortion on LSB only.

Effect is like raising the voice an octave or two.

Checks with single and 2 two tone signals do not show a problem.

I have checked with Yaesu UK and Yaesu Reflector without success.

I believe that the FT1 may suffer from similiar fault.

73's de Ned/EI5DS

4723. FS: Zenith Transoceanic 3000-1

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-05-20 15:34:40 UTC
From: NZ8J <timcook@erinet.com>
Message-ID: <3b07e5a7$0$88188$4c5ecdc7@news.erinet.com>
Source record: 53233

For Sale Zenith Transoceanic Model 3000-1. In nice condition,, some of the covering is coming loose on the sides (glue lost its adhesivness) . The same is true for the plate behind the volume and tone controls. It just needs to be reglued. Chrome is all good. Has the log book, battery box is there. Antenna is good , not bent etc.. When I put batteries in it, it came to life on 5 MHZ band and I heard a few stations, when I turned to other bands, there was a lot of static and then lost all signals. I can hear some noise in the speaker when the vol is turned up all the way and there is static when turning the bandswitch, but it is not receiving stations now. I do not want to take the time to take it apart and possibly clean the bandswitch etc, so I will sell it as-is for $60 plus shipping. Someone who can work on these will get a good deal or it could be used for a parts radio. I can send digital pics to someone if seriously interested...
please email direct if interested..

>
>I would love to see how the prices at Dayton compare to what they go for on
ebay
>!
>Jim

Well some of them are more and some of them are less......I think large heavy
items tend to go for more money at good swaps......this due to the customer
doesn't pay any shipping costs.....but then consider this.....
"Ticket to Dayton" $22
Motel rooms $60-$200 per nite...most in the $129 range
Food while there.......
Transportation to get to the show........
YOUR TIME to go to the show.......

all of the above tend to make the "Real Cost".....of the Flea Bay item
considerably cheaper unless you are going to the show anyway and don't consider
any of the above costs.....

Me..well I go every year anyway.....we sell some there and buy some there..
and we get to see a lot of our friends.....

Might anybody be able to help me in identifying my latest find. It is a old transceiver that I would guess made in the 20's or 30's and operates in the 2 mhz band. It is made by Radio Specialty Mfg. of Portland Or. It is housed in a wooden box and looks to be a regen type of receiver. It uses one volt filament tubes like the 1J6, 1H4, 1F5, 1D7, and 1B1. There are 9 tubes and it uses a 4.5 volts for B+. It was made for the US Dept. of Agrl. Forestry Service Radio Telephone SPF 1030 Model AE. The frequency that was printed on the case was 2244 kcs. Before khz came into fashion. Pleas reply by email also. Thanks Don Smith KB6GQA

Lew,

I have both an AX-190, and SX-190. Both are a bit "hissy", and the S-meters in both need a lot of input to get any deflection.

There is a mod going around to change the front end, I think to a FET. I think I have some sketchy details around inside this pentium somewhere...if I can locate it I will send. Don't know if this will help your complaint, but it is reputed to boost the sensitivity of this series.

>enthusiasts
>I wonder ?

Opinions vary. I have an S-36, which is almost the same model. This radio, and the SX-28, earned their reputation in WWII. Supposedly, General Patton used an S27 to listen to tank communications in Europe.

Though the sensitivity of these receivers is low by modern standards, they do a pretty good job on 10m and 6m. The tuning range doesn't quite reach 2m, depending on your particular model. The audio is very good, better than any modern receiver, since they use PP 6V6's, a scheme identical to the SX-28. They are not quite as difficult to work on as the SX-28, but definately win the prize as the HEAVIEST radio I have ever handled. I'd suggest finding spare 955's and 956's for the front end, as these are becoming scarce and the prices are up. A recap and alignment should restore performance to it's original level. Seems there is also a substitute IF tube you can use to pick up the gain a little, but I don't recall what it is offhand, I'd have to go look at mine.

These receivers are getting less plentiful. A pretty good looking one just sold on E*** for $350.00.

Good luck, and enjoy!

HI Jim --

Just got back from Dayton. My comments:

I was surprised to see quite a few really good deals on BAs that
were very restorable. These were almost exclusively from individuals,
as opposed to the "eBay Trailers". The "eBay Trailers" were pretty
much in line with eBay prices. Beautiful gear, but high prices. Well,
if you don't want to put any work into the radio, you're gonna pay to
have someone else do it....

What we did NOT see was a lot of BA gear being carted around. From
what we saw (or didn't see...) money wasn't flowing that much this
year. I'd be interested in other's comments. Maybe things broke
loose on Sunday, but I was only there Friday and Saturday.

Trudged along the PA turnpike Sunday night, crawling at 5 MPH around
the Fort Littleton exit....yawn.....

4758. FS.Racal SSB Adapter/Fine Tuner for RA117

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-05-21 15:44:40 UTC
From: "radio-exports.com" <info@radio-exports.com>
Message-ID: <tgidope3gqvnd4@corp.supernews.co.uk>
Source record: 53167

FOR SALE Racal RA 218 Sideband Adapter & Fine Tuning Unit.
This Racal accessory was designed specifically for use with the Racal RA117 Receiver, for receiving SSB transmissions.
The unit takes its input from the 100kc's if output of the receiver and converts these signals into the audio components of the side bands.

Also contained in the unit is a Fine Tuner.
This is entirely independent of the sideband circuitry.
The Fine Tuner,which has an output of 1.7 to 1.701 Mc's is used as a fourth mixer local oscillator,when interconnected to the RA117 receiver.

Independent output levels are provided for both upper and lower sidebands.

The RA218 is a self contained rack mounting unit which matches the RA117 Receiver.
The unit uses a total of 12 tubes.
General condition is good,the front panel is undamaged,all control knobs are original.
The unit has been tested and is in good working order.

Sideband Adapters for Racal RA117 receivers rather scarce, which is a pity, as they are a very useful accessory.

Being a matching unit,and, like everything else built by Racal,of high build quality,the RA218 Sideband Adapter & Fine Tuner not only works well ,but looks good alongside the main receiver.

The price of this very useful Racal accessory,which includes the cost of packing and air freight from the UK to the USA, is just $395 US Dollars.
If you would like more information or wish to order,please contact Graham Leo
info@radio-exports.com

Thank you for your interest and time.

Hi Shew....you blew this one......Saturday.....just a very slight amount of mist......not what I would even call rain....I pitched a clear plastic over the items that I had outside my tent for maybe 30 minutes.....after that it was a super nice day....sorry U had to leave.....and Sunday was a super nice weather day.......and YES looked like a lot of the people stayed around for Sunday... you always have some guys that pack up and leave....this year looked to me about the same as normal......
And to the guy that asked about buyers...and money changing hands.....I certainly have no complaints......sold a bunch and bought some more too....

>There is a mod going around to change the front end, I think to a FET.

I have one of each of these radios (SX- and AX-190). They are very well made and good-feeling sets that are worthy of making mods to. Unofrch, not all present-day Ham and SW BC bands are represented.

The preselector is pretty good as it is -- 3 gangs, to FET RF stages, and quite sharp tuning. However, I have a zerox of a magazine article on how to make it even hotter. Basically you replace each of the FETs with cascode pairs of more modern FETs, giving a 4-FET front end. This should really make it shine about 14 MHz.

Might take me a while to dig out that article, though. --Mike K.

Can anyone tell me what the differences are between the HQ-100, 100A, 100C and 100AC are? I found a mint HQ-100C at a garage sale this weekend and it has the 100kc calibrator inside and an unlabeled switch on the back next to the s-meter pot. Does 100C then just mean the the calibrator was factory installed? It doesn't have the clock.

Thanks,

Something happened to the HTML code that corrupts Netscapes browser in
the Description and Photo area. Use Netscapes editor and it will be
reveiled, except photos won't enlarge. Use IE and the auction is normal.

The kit is a NRI course from the late 20's, with lots of extras parts.
Very clean, like new parts, plating not tarnished and lots of
documentation.

Some folks go for the NRI stuff. Seldom is any of it found
unconstructed.

The five minutes is the default time for Netscape to figure out what to
do with code that it can't understand.

Look again.

Charles

That's the one that tunes up to 160 odd megs?
Bottom end is 42 megs or something?

I have a few pieces of Swan stuff excess to my needs. Will sell outright or swap for an older laptop (486/early Pentium OK. Must work) or a newer one if you want enough stuff.
Prefer swap. Have other peices, let me know what your looking for.

1) Swan 510X crystal control for 500 and up series $50 shipped.
2) Swan 117X power supply only, powers most Swans $40 + ship.
3) Swan 14X DC module for above. $37 shipped.
4) Swan SWR-1 SWR/Watt meter $23 shipped
5) Swan VX-1 VOX unit $30 shipped.
6) Electrovoice 638 HI-Z desk mic for above $55 shipped.
7) Swan 500C transceiver with desk mic $100 + ship.
8)117XC power supply/ speaker $60 + ship.

> and yes, for $18, it followed me home

Steve,

The difference between the 100 and 100A is the A had the bfo between the dials.
The 100C denoted a HQ-100 with a clock, the HQ-100AC denoted a 100A with clock.
The calibrator was an accessory. So, you have a HQ-100 period.

4781. Re: R-390A vs. 51S-1?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-05-22 02:19:18 UTC
From: wb0poz@prodigy.net
Message-ID: <9ecic4$6t2g$1@newssvr05-en0.news.prodigy.com>
Source record: 53192

The R-390 or R-390A is superior in almost every way to the 51S-1. With a good antenna, the 51S1 is extremely susceptible to cross-modulation, whereas the R-390 is almost immune. The 51S-1 can be harder to repair than the R-390. Had a crystal crap out in my 51S-1 and it was a bear to pull out the wafer.... same problem on an R-390 can be finished in 5 minutes.

OTOH, the 51S1 is lighter and much better looking than than the R-390 and has rejection tuning.

Both have the typically crummy COllins audio.

Well John, This ought to stir things up. IMHO, the R-390A/URR will run
circles around a 51S-1 except in the ssb mode. I have had 34 R-390's
over the years and have never seen a 51S-1 that could hold a candle to
it. But, if one were to modify the R-390A if deck with the
Lankford/Chambers agc/ssb modification, then the R-390A wins in the
ssb mode also.

You won't believe the face on this thing! It's so shiny it's almost mirror-
like. Not a scratch on it. The case is very nice as well. Inside would
be perfect except somefelt felt it necessary to label the chassis tube
sockets in 72-point type with a Sharpie marker! But boy does it have
a pretty face. Too bad it's a TV Alignment generator instead of something
really useful! Seems to work, if ya have some old analog TV's out of
wack :-)

Thanks for the look

Source record: 53111

FOR SALE EDDYSTONE PANORAMIC DISPLAY (Tube Vintage) Model EP14

The Eddystone Panoramic Display Unit,Model EP14 is a general purpose display unit, for use with an Eddystone or other receiver having an intermediate frequency in the range 5-60 Mc's.With this unit you can visually examine a spectrum from 1MHz wide down to a spectrum of less than 30 kc's wide.

Signals can be examined in great detail as resolution in the order of 2 kc's is possible at the slowest sweep speeds.

The panoramic display unit uses a green trace cathode ray tube, which is fitted with a hood ,to permit viewing under difficult lighting conditions.The screen is fitted with an engraved graticule for direct measurements.

A built in crystal calibrator gives marker pips at 100 kc's intervals for accurate calibration of the frequency scale.

,selectable sweep speeds, simplify the accurate presentation of widely differing signal displays.

In addition to its main application as a panoramic display unit,the Eddystone EP14 has provision for use as a wobbulator.
It also has many other applications as a versatile test instrument, including frequency measurement,drift checks,and use as a sensitive RF volt meter (20 microamps f.s.d.).

Advanced design,rugged construction and high quality components are used throughout.The unit is even fitted with a blower, to allow prolonged use at elevated temperatures.

The unit employs 15 tubes in addition to the C.R.T. and has solid state power supplies.
Size is 19" wide x 5.25" high x 15" deep and the unit weighs 36lbs.

Condition of the display unit is near mint and it is in full working order.

The price of this hard to find Eddystone unit, inclusive of the cost of packing and Air Freight to the USA,is $495 U.S. Dollars.

If you require further details or wish to order,please contact Graham Leo info@radio-exports.com

Thank you for your time and interest.

The PLL has failed, and is very expensive to repair, $300 +.
It happened to mine old 980 too.
As soon as the rig was repaired, I sold it.

51s1 leaves more room on the desk for other junk. Doesn't do especially well on 160 meters. There is a 55G1 preselector for 160 which is a rare, expensive and pretty useless gadget (I have one) The 390A is something of a pain to use in terms of changing bands. Requires a stong back and I wouldn't want to have to repair it -- but I find the 390A a superior receiver.

From: Al Parker <aparker1@ec.rr.com>
Message-ID: <tHDO6.42242$i56.11835341@typhoon.southeast.rr.com>
Source record: 53122

The Valiant is operating, but probably needs attention in a few areas.
I
have replaced the troublesome 18k VFO dropping resistor, with a 3 watter,
mounted outside of the VFO box. I have operated it recently on 10m (& 40 I
think). Front panel is good from a straight front view, but has some
rubs/scratches around the outside lip where it gets layed on when you tip
the
rig up. Case is original paint, oughta be re-done. Chassis is dusty, but
will
clean easily. All good tubes, 3B28 rectifiers still. (one is loose in its'
base) I've started replacing the missing white dots in the knobs, seem to
drop
& lose every other one I make, so haven't finished.
I don't really want to ship it, so $325 if picked up, or I will deliver
to
the Durham, NC, fest on Sat. $375 plus actual shipping cost if shipped.
I'll
do a good job of packing.
Also have an SB-10 that I got with it, but not made the mods. $65
pickup or
$75 plus shipping. Won't sell separately.
Glad to answer any questions, & can take some digipix.

For sale:

VERY nice fully working Gonset GSB-100 transmitter. Almost mint, pristine face with excellent lettering and all original. Everything works, and works well. I've used it on the air many times. 100 watts CW/AM/SSB and even PM - Pulse Modulation!

Band changing via a Collins-esque rotating drum - excellent look and feel. Comes with a copy of the manual.

See it in my shack at http://www.boatanchors.com/page15.html - scroll to the bottom of that page and you'll see it next to my HQ-100 in my CW/AM station.

$220 plus shipping from 98466 ($75 to most US destinations, or thereabouts). Would MUCH PREFER a local Tacoma, Washington area buyer!! Will discount the price to $200 for a LOCAL pickup. I could even then demonstrate it in use.

I also have a VERY nice Parts GSB-100 - all there EXCEPT for the power transformer, tubes, and top chassis cover. ALL the knobs, the meter, the dial drum and all other components are THERE. VERY restorable. $120 plus freight - $65 or so to any US destination.

These rigs are heavy and awkward to ship - if you are ANYWHERE near Seattle/Tacoma, I will discount each by $20 for a LOCAL pickup!

Thanks for the look.

Hello Dave,
This is Roger, WA7BOC, and the QTH is Montesano, not too
far at all from Tacoma. Your FS on the GSB 100 caught my eye. I have been
chasing after an Invader 200 but no luck yet. I am looking to pair a rig
up with my Drake 2B for a classic kind of station. I used to have an
HQ110AC back in 1966 paired with a Ranger I, yup sure wish I had them
today along with my A4 with matching speaker/light combo and CE100V. If
only I had known then!!! Also had a 32V2, but sold it to a ham in
Ritzville and shipped it to him via Greyhound from Aberdeen!
Anyway, what else can you tell me about the Gonset, I will check out the
website as well but what are the finals, when was it built, what method of
ssb generation, phasing or crystal filter? Have you done a solid state
conversion on the power supply and how are the caps?
I am working on an all Eico tranmitting setup as well, with a 722 vfo with
the 720 xmtr and have a lead on a 730 modulator. Also a DX-40 and an SB-10
in progress. Been thinking about providing a screen voltage switch to get
the 6146 operating in the proper class for ssb, to use the SB-10 with the
Eico 722. More projects than time at this point!, hi hi, Your website
pictures sure are great!
What say on the GSB OM??
de WA7BOC

4826. FS.Rare Loop Antennae (British RAF WWII-R1155/T1154)

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-05-23 10:20:39 UTC
From: "radio-exports.com" <info@radio-exports.com>
Message-ID: <tgn3h5kh0u2b92@corp.supernews.co.uk>
Source record: 53132

For Sale, Extremely rare,World War II Loop Antennae,Type 17,Air Ministry Pattern 10D16950

As used by the British Royal Air Force in World War II for direction finding purposes.

If you are assembling say the R1155/T1154 receiver/transmitter set up, which was used in the British Lancaster Bomber,finding a genuine R.A.F. Loop Antennae from the early 1940's ,which you will require in order to complete the D.F. part of the equipment, is becoming almost impossible.

Do not despair,we can help by supplying you with the genuine article.

This British Air Ministry, Second World War, Loop Antenna ,is a very compact unit,being an encased, multi-turn loop, of approximately 8 inches diameter.

The attractive looking loop is shrouded in an original tufnol type of molded material,which is typical of the construction and design of these British Loop Aerials,as used during the Second World War.

As you would expect, it has an azimuth indicator with two scales,red & blue (left and right handed), calibrated 0-360 degrees.

The unit is fitted with an adjustable brake and quick release mounts.This Loop Aerial is in good mechanical condition. The loop windings have been tested for continuity and are in good order.

The price for this extremely rare item, which includes the cost of packing and of air freight to the USA is just $295 US Dollars.

If you would like more information or wish to order,please contact Graham Leo info@radio-exports.com

Thank you for your time and interest.

4827. Re: Extremely NICE Gonset GSB-100 and parts rig too

Source record: 53136
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

Hi Dave:

PM stands for phase modulation, not pulse modulation. It is similar to frequency modulation and should be either detected with a fm detector or slope detected by an am receiver. It will drive someone nuts if they try to receive it on a ssb receiver.

Roger asked about the method of ssb generation. The Gonset was unique in that it claimed to use both. Actually it was a phasing rig with a crystal notch filter added to reduce the carrier even further.

The power transformer was prone to fail and many if not most rigs have replacement transformers.

From: "radio-exports.com" <info@radio-exports.com>
Message-ID: <tgnmqbacrrkf43@corp.supernews.co.uk>
Source record: 53046

For Sale,early, Eddystone Model 740 Communications Receiver

The Eddystone Model 740 Communications Receiver is an eight tube receiver, dating from around 1950.

Frequency coverage is in four switched bands,viz.,200-600kc's , 1.4 -3.8 Mc's, 3.7-10.6Mc's and 10.5- 30.6 Mc's.

The large semi-circular tuning dial is calibrated with two coloured scales,red for broadcast and white for amateur bands.All scale markings are very clear.
There is also a logging scale and an inset vernier dial,for accurate frequency setting.
Tuning is by the justly world famous Eddystone slow-motion drive and this particular one is silky smooth and a joy to use.

Front panel controls include RF Gain,AF Gain,BFO,Noise Limiter,AGC and Tone.

The receiver is in its original black crackle metal cabinet, which still retains its distinctive "Eddystone Lighthouse" Badge.

This attractive early Eddystone receiver is in good working order.

The price for this fairly scarce model Eddystone Receiver,which includes the cost of packing and of air freight to the USA is just $295 US Dollars.

If you would like more information or wish to order,

please contact Graham Leo info@radio-exports.com

Thank you for your interest and time.

FS: I have a very nice Collins 75A-3 receiver that works well. I have just taken digital pictures of it and will send to seriously interested parties via email. This receiver was sold but the buyer had to withdraw from sale. It has the mechanical filter in it with a second slot for another filter. It also has the optional commercial product detector for SSB in it. It comes with manuals for both the receiver and product detector. $685 shipped 48 states. Email for the pictures.

4847. FS: Yaesu FT-101EE nearly mint

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-05-23 22:57:19 UTC
From: SideValve <sabbatai_zvi@NOSPAMhotmail.com>
Message-ID: <hofogtkel88uegrh71ghjbis52j0ukl4es@4ax.com>
Source record: 53056
Cross-posted to: alt.ham-radio.marketplace,rec.radio.swap,rec.radio.amateur.boatanchors

Yaesu FT-101EE HF transceiver with original manual, microphone and AC power cable.
160 through 10m plus 11m SSB, CW, AM and digital modes. Has built-in 120V AC and 12V DC power supplies, MOX, VOX, PTT, NB, RF ATT, RIT and calibrator for 25 kHz and 100 kHz markers. Metering for plate current, ALC and power output level. This radio also has phone patch connectors in back.

This rig sparkles! It still has the original plastic on the faceplate and the front panel is completely mint. Handle is intact. There is a little dirt on the top but no scratches anywhere on the cabinet.

This is, without a doubt, the best looking, and best working FT-101EE I have seen in years. Looks like it has hardly been used since new. Plastic is still on the front panel which is immaculate.

Works fine on all bands, and all functions are working properly.

Will sell for $325.00 plus shipping

Picture and details available on my web site at:

http://home.cfl.rr.com/happysurfer/trade.htm

*** Please remove the 'NO SPAM' to e-mail me! ***

I truly enjoy my 5100B. It runs a pair of 6146's plate modulating a pair of the same. Very little drift. The rig is well built and easy to work on. The modulator is built on it's own chassis. I paid $120 for it a few years ago and it is mint. I saw one in Dayton that was a '7' at best and the guy wanted $500.

OK this radio is mostly DSP. Software in chips. So ... can you get the software for the DSP's ?. You know darn well they blew the read links on those chips.

So EVEN if you could get the right chips 10 years from now - won't do you much good without the software.

Same for the early digital stuff from the 70's. Had to replace a CD4048 made by RCA. It's now an obsolete part. RCA, Harris and National Semi no longer make it. Haven't for years.

But I can still get all the 12AX7's I want. Just confirms my belief in BA's.

4868. TMC STR5 receiver FS

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-05-24 09:41:28 UTC
From: radiomatt@aol.com
Message-ID: <20010524054128.19314.00001006@ng-fj1.aol.com>
Source record: 53077

This is an extremely rare TMC fixed freq receiver which uses plug in modules to determine freq/mode. One module provided. This one is in the 5-6 MHz range.
See the brochure at : http://www.geocities.com/vintagetmc/str5-1.html

I have the only known units.

I want $300 for it.

EMail please

4871. FS.Classis Eddystone VHF Communication Receiver Model 770R

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-05-24 11:31:20 UTC
From: "radio-exports.com" <info@radio-exports.com>
Message-ID: <tgps2a1r15sg58@corp.supernews.co.uk>
Source record: 53079

For Sale in the UK by radio-exports.com
Eddystone Model 770R VHF Communications Receiver.

This receiver is a first class example of a high grade Eddystone receiver from the tube era.

Ruggedly built,the receiver uses a total of 19 tubes in a single conversion design,covering a frequency range of 19Mc's to 165 Mc's.
There are six turret switched ranges,viz:-
114-165 Mc's, 78-114 Mc's, 54 -78Mc's, 39 -54Mc's, 27-39Mc's, &
9 -27Mc's.

Provision is made for the reception of CW,AM,FM and NBFM signals.

The large weighted Tuning Knob gives is a joy to use, as is the beautifully engineered Turret Tuner for which Eddystone receivers are justly famous.

Use of the tuning vernier in conjunction with the logging scale gives no less than 2500 logging positions on each range.

Controls include,AF Gain,IF Gain,Noise Limiter,Standby Switch, & Adjustable Muting.

The receiver is fitted with a dual function panel meter indicating signal strenght with AM signals or correct tuning with FM.

The receiver is housed in its correct table top cabinet measuring 17" wide x 9"high x 15" deep.Weight 60 lbs.

Operation is from 100-125 or 195-250 volts ac.

This receiver is in very good,all original condition.It has been tested and is in good working order.
The price,which includes the cost of packing and air freight to the USA is $485 UD Dollars.

If you would like more information or wish to order,please contact Graham Leo info@radio-exports.com
Thank you for your time and interest.

4872. Re: Extremely NICE Gonset GSB-100 and parts rig too

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-05-24 11:45:54 UTC
From: John <moe@email.msn.com>
Message-ID: <#oOOAAG5AHA.139@cpmsnbbsa07>

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

This is an extremely well thought out transmitter. I have the GSB100 and matching GSB101 KW amplifier. They look great together.
Only problem I can see other than the aforementioned power transformer weakness is the lack of power. Only has one tube in the final. Can't remember the number off hand. Puts out a good signal, though. Very well liked by CW ops as it has a built in VOX and does a great job on Break-in keying. Because it roughly has a panel similar to the old Collins, mine sits atop my 51J2.

Any other questions, let me know. I live in Bellevue, WA.

Source record: 53082

FS: I have a Rycomm R-1307A receiver (digital pictures available) that covers from 0-820 khz continuous. It has AM, LSB, USB, CW, FSK modes and has 4 IF selectivity positions. I have a digital picture if someone is seriously interested that I can send. This was part of an estate and I received no manual with it. Because of its good crystal filters and all mode capability it would make a great down-conversion receiver to feed your 455 or 500khz IF from another receiver in to so you'll have additional filtering and a product detector/AF apmlifier. The receiver appears unmodified (but complete) and currently is unchecked. $175.

For Sale: Racal RA6790/GM (R-2174-A) HF receiver. This unit still has the front panel escutcheon which indicates a 1988 contract date (s/n is over 10000), and has the LED display lighting and the newest displays and keypads available. Equipped with individual 2.7KHz filters for USB and LSB, plus the standard 400Hz, 1.2KHz, 3.24KHz, 6.8KHz and 16KHz symmetrical filters (7 filters). Includes the factory reprint manual (fold out schematics), power cord and a speaker adapter cable. Has gas tube protection on antenna input, but no RS232 option. Complete lack of scratches around the rack mounting holes indicates to me that this receiver was a late purchase and spent it's time waiting in a cabinet as a spare. Some minor "hangar rash" on top and bottom covers, but this one is about as unused as they come. $1150 plus shipping from St. Louis, MO.

Source record: 53087

Hi All,
I have a National NC57 for sale. It works well on all bands and has recently been serviced: The plastic dial covers that always warp with age have been replaced, Any leaky caps have been replaced, the unit has been peaked and aligned, the bandspread dialcord has been replaced, all tubes have been checked and where needed, replaced.
This set is presently in very good condition and will provide many years of listening pleasure.
I am selling it because of personal conditions that have forced me to liquidate most of my collection.
I have digital photos of the set for sale available to interested buyers.
I am asking $110.00 plus shipping from the 07860 zip code.
Please email me directly with any questions...
rgds,
Mark S.

Have a Hammarlund keyer for sale. The keying relay seems to work fine for keying a transmitter. However, the relay that controls the tone stays on all the time; in other words, when you first turn it on, you hear nothing, then the first dot or dash you press causes the tone to stay on continuously. It is probably something simple like a resistor that isn't discharging a capacitor but I really don't know. Have a manual but can't remember if it is original or a copy. Accepting offers if it is of interest to you.

73s,

Evan

4892. Knight T-60/Heath HG10b VFO mating question

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-05-25 02:46:45 UTC
From: dhassler@orednet.org
Message-ID: <dhassler-2405011946450001@159.121.217.12>
Source record: 53002

Hi gang. I've got both of these units ready to go, modifying the HG-10b for cathode keying, although I'll be keying the T-60, not the VFO.

Here's the hitch: I've rewired the Jones plug out of the HG-10b to mate with the proper voltages and ground on the jack of the T-60, but I have no idea where the "KEY" line out of the VFO should go. Since I'm keying the transmitter anyway, should I disconnect this line in the VFO? (this is my first inclination). Or something else? There doesn't appear to be anyplace left for a "key" line to go (options are pins 4-5, the external stand-by/relay lines, or 7-8, 117VAC for energizing a relay).

This is my first tube rig/boat anchor set up, and I want to do it in a non-flammable manner. ;^)

Thanks for your help,
Dave

I would certainly hope not, since the manuals are no longer available from the copyright holders. And, as far as I know, there are no royalties to be paid on the sale of existing copies.

4898. FS/FT GRC9 and accessories

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-05-25 09:24:45 UTC
From: Nico van Dongen <nico.vandongen@compaq.com>
Message-ID: <zxpP6.735$fi2.16335@news.cpqcorp.net>
Source record: 53008

I have for sale or trade a GRC-9. (I'm interested in British HF manpacks)

The set is license build by T.R.T. France (don't worry, English language on the set). The cabinet, TX- and RX units are cosmetically very nice and the set is in good working condition. The GRC9 comes with a photocopy of the Technical manual TM 11-263.
Pictures of the set can be send via Email if interested.
Price 100US$, shipping will be 40US$ extra when send via economy mail service (6 to 8 weeks delivery time)

If interested I can supply some additional accessories for the GRC9:
? GRC9-DY88 power cable,
? T17 microphone,
? HS30 headset,
? receiver battery power cable,
? antenna base that is inserted on the side of the GRC9 cabinet
? Winder with antenna anchor ropes used to hold the antenna in position when the GRC9 is used as a field station.
Accessories together $50, shipping extra. (Because of the weight I can't send them with the GRC9)

I'm located in the Netherlands

4900. FS.Classic British RAF R1224A Comm'n Receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-05-25 11:40:52 UTC
From: "radio-exports.com" <info@radio-exports.com>
Message-ID: <tgsgvf7vgulcac@corp.supernews.co.uk>
Source record: 53010

For Sale, British Royal Air Force, Communications Receiver,Type R1224A,dating from the early 1930's.

radio-exports.com have for sale a particularly nice example of this hard to find, vintage (tube)Receiver.

These early HF communication receivers were used extensively by the British Royal Air Force during the early 1930's.
They are particularly attractive tube type receivers,having all the charms of a by-gone age.For example,they were one of the very last RAF communication receivers to be housed in a wooden cabinet (complete with with lift up lid).

Dominating the receiver front panel is a classic muirhead dial drive.

The receiver uses a 5 tube circuit.It is designed for battery, or batteryeliminator operation and operates from 120 volts B+(HT),and 2 volts for the heaters.The grid bias requirement, which can easily be provided by two small1.5 cells,is -3 volts.

All original lettering remains on the front panel and the condition throughout is very good.There have been no modifications and all components are original.

The original calibration chart is still with the receiver,fixed, as it should be,to the inside of the lid.

Coverage is 4.3Mc's to 21Mc's in 3 switched ranges

This scarce and desirable collectors early communications receiver, is in fine working order.The schematic for the set is included.

The price,which (please note) includes the cost of packing and of air freight fron the UK to the USA ,is $410 US Dollars.

If you would like more information or wish to purchase,please contact Graham Leo info@radio-exports.com

Thank you for your interest.

>Dominating the receiver front panel is a classic muirhead dial drive.

>The original calibration chart is still with the receiver,fixed, as it
>should be,to the inside of the lid.
etc...

Love these eloquent radio descriptions from the UK. Too bad the story always ends with a price suitable only for for the rich and famous. No complaints, he can put any price he wants on his stuff. The ads are just fun to read..., the King's English applied to boatanchor descriptions. Wonder how he would describe a BC 348?

... a classic art deco bezel frames the tuning dial, illuminated, as it should be, from tastefully concealed incandescent bulbs. A massive tuning knob dominates the front panel, its otherwise perfect fluted symmetry interrupted only by a rather inconspicuous spinner mechanism located on its outer perimeter...

You can leave the key line disconnected from the HG-10b. To operate the VFO use the front panel switch. Don't know if you will need to go to 'spot' or 'operate'.

4915. Re-lettering radio face

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-05-25 17:38:19 UTC
From: John <jh.lewis@worldnet.att.net>
Message-ID: <fMwP6.44671$t12.3432818@bgtnsc05-news.ops.worldnet.att.net>
Source record: 53025

Hi all,

I acquired an Echophone EC-1a awhile ago that was so badly rusted with paint flaking that I felt obliged to strip it down and repaint the cabinet -- naturally, this obliterated the lettering (volume, main tuning, etc.) on the cabinet face.

At one time (somewhere on the web) I had run across a "how to" about re-lettering a radio, but now I can't find the information. I would appreciate knowing where to find the different lettering kits, and the various (best) methods (tips) for doing the job.

Thanks for any help,

John

Hey John, I, too, would be interested in any information regarding the silkscreen process for replacing the lettering on old sets. There has to be a way to exactly replicate this lettering without having to fork out $250.00 or $275.00 to get it done! If there is anyone out there who can shed any light on the "how-to" aspect of silkscreening, please let us know!!

Seems to me, best bet would be to photograph similar radio
[no knobs] at various differences with a tripod mounted
35mm or bigger camera. The resultant negatives are projected, with an
enlarger, onto photosensitive material, which is than " washed " to
remove areas not receiving light. The " ink "
more of a paint goes on, cleared over later. That looks like
a realistic way of doing it. The alternative would be to put
stick on lettering on the silkscreen [safelight ?] and use some type
of cut out pattern for the curved lines. I'm sure the photo technique
would work best. Hate to be a * pain * but did you get any pix before
stripping ?

4930. FS: Simpson 260 Series 7 Meter

You're right, the rf section is hard to get into--unless you unplug it and take it out to work on. That's supposedly the advantage of B&W's unitized construction--the modulator, vfo and rf deck can all be unplugged, unbolted from the chassis and removed for repairs and testing.

I know, generally, about the "screenburning" process that silkscreeners use to make their screens for printing. But what I really need is for someone to point me to a site that can give the specifics on how to do this procedure, and what equipment will be necessary to do the job. Come on guys! there has to be someone in this group that has the know how and is willing to share it. Tnx. 73

4940. Re: Need advice, What Does Marker Gen. Do

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-05-26 14:14:55 UTC
From: "Peter J. Bertini" <commquart@home.com>
Message-ID: <zTOP6.29227$v5.2317839@news1.rdc1.ct.home.com>
Source record: 52900

It was for aligning the bandpass and traps in television
IF stages. The scope is used to check the bandpass
output of the IF stages, the generator provides
a sweep for aligning the IF for flatest bandpass,
the markers provide the calibration points. It was
sort of like a panoramic sweep the IF.

Datak still makes dry transfer decals (rub-on's) that work quite well, assuming the font and size are acceptable to the user. They come in black or white... that's all. There are the general purpose electronic labels and they've recently added a smaller packet of labels that addresses amateur radio, specifically. This might be an avenue of approach. Good luck with your project. de K3HVG

I have a very nice Drake R4C with Sherwood mods and three filters on the back. No AM filter or Noise blanker. Original manual included.
Sherwood if filters with relay switching and special sherwood AGC filter switch knob.Audio amp and power supply mod and IF mod plus Sartori tubesters. and preamp (mounted on back). Hot reciever !!!!
I have a FT1000D and rarely use the Drake stuff.
I want to trade above drake for a Yaesu FT 817 setup with cw filter.

Source record: 52913

I fixed one awhile back with the same problem. It had a couple of the switching diodes shorted that switch the front end bandpass coils in and out for each band. It seems that if 2 are shorted it kills the pll circuit. Maybe it will do it with only 1 shorted, don't remember. Go to the Kenwood site and look at their service notes. They have 2 different notes on pll problems. You can find the bad diode without removing them. They tell you how to do it in the notes.

There is another reason that your same symptom happens too. The notes explain.

Try Ocean State Electronics.

Their URL is www.oselectronics.com

You can get a box of sheets of individual letters. The ones from AES
are not individual letters. I've used both of them to re-label chassis.

They turned out OK, but be careful applying the coating. Thin in out
first. I used a 50-50 mix. Coating and burnishing tool are available
from Ocean State.

From: David Ross <ross@hypertools.com>
Message-ID: <3B11318D.384CF155@hypertools.com>
Source record: 52934

John -

Re the bad PLL in your TS-440...

Kenwood published a service bulletin regarding just that. Seems that
when they manufactured the radio, they applied a plastic goop to some of
the PLL oscillator transistors in the radio. The goop was put there to
limit microphonics, but as the goop ages it apparently becomes
conductive and affects PLL lockup.
Their recommended solution is to remove the original goop, replace the
transistors, and then replace the goop with some other kind of goop...
They recommend hotmelt glue, if I remember...

good luck with it

The Military Radio Collectors Association (MRCA) will hold it's second annual meet at the Tobyhanna Army Depot, Tobyhanna, Pa, 13-16 September 2001. The event will, once again, be held in conjunction with the Red Ball Military Transport Annual Rally. "Official" hours are 08:00 - 17:00. This is a golden opportunity for anyone interested in vintage military electronics. Activities will include equipment displays, on-the-air operation, formal presentations, and a swapmeet.

See the MRCA webpage for complete information:
http://www.milradio.org/

Interested parties should consider joining our e-mail reflector to keep abreast of further developments. See the webpage.

Howdy

For Sale: Phillips JAN 5763 NOS Vacuum Tubes

Tested and matched on my calibrated TV-7D/U tester. These tubes are New-In-Box and very new looking and testing. Perfect in all regards.

Matched quads (4 tubes) for $15 per set, plus postage. Postage is USPS Priority Mail only (no handling fee). Foreign orders welcome, shipping will be by Small Packet Air Mail.

These tubes are all strong testing and each quad measures within 1 point of each other on my calibrated TV-7D/U.

These are Phillips ECG, USA, white box. Box says 8/85 - perhaps some of THE last tubes made in America??

I guarantee these tubes to test new or your money back.

Here is a picture of one:

4985. Updates for Heath TC2 Tube Tester

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-05-28 03:18:25 UTC
From: thompson@mindspring.com
Message-ID: <9esg2f$226$1@slb3.atl.mindspring.net>
Source record: 52945

I am still looking for updates for the Heathkit TC2 Tube Tester. For example I don't have the test settings for the 6AQ8.
I have the original roll, a supplement that came with the tester, some hand updates from Phil W5YVT (the original owner),
and a 1978 Update book. However many tubes are missing and since I have most of the common sockets I am looking for
additional updates (Phil says they are available). I even have the picture tube test collar.

I will be glad to buy or re-pay expenses as necessary.

It's here or *that* auction place, and I'd rather someone on this list have it. This is my own personal receiver and is in superb operating and cosmetic condition. Yes, even the clock works perfectly. I kept trading "up" until I got this beauty, but now it, along with a lot else, has to go. If you've ever wanted the top-of-the-line Hammarlund at a good price, DON'T let this one slip by.

Best offer over $500.

Will package so that even the UPS gorillas can't damage it in shipment.

73,

Ron - K5MVR

Hi all,
I've recently found a surplus store which has tons of old tubes which seems
to me some type of transmitting tubes. Most of them have no readable printing
on it, but on one of them I read "SIEMENS 4/1000". Can anyone tell me
what are those tubes and give me some basic caracteristics?
Thanks in advance.

Spread Spectrum requires that the receiver posses the same coding as the transmitter.

I suspect that in cordless telephones there's a chip which determines whivh "code" is in use. Obviously these have to match.

Knowing how manufacturing is done, I'd bet there aren't more than a half dozen actual codes in use in any given brand (actually most are made by Uniden, no matter what the label says).

But here I draw a blank...how do you get extra handsets to "play" with?

Depends how it looks like, but my first guess will be that this is a
high power rectifier. DCG4/1000. 2.5V 5A heater, 250mA average
current, and 10KV PIV anodevoltage. Mercury. Very close to 866A
Could also be a 4-1000A transmitting tetrode (7.5V 21A heater, 6KV
anodevoltage 1000W anodedissipation), but not so likely for this is a
typical Eimac valve. I don't know if Siemens ever made this one.
DCG4-1000A is very common in Europe.
Mybe you could make a list of the valves and take some pictures?

A list is a tough work, there're several hundreds of old tubes with
almost no trace of signs on them. I'll try to buy some of the most
"promising" one and I'll take the pictures and post them.
However this Siemens 4/1000 has more or less the size of a 2E22 tube,
just a bit bigger.
Since this surplus store is "populated" by many hams I believe this
isn't a transmitting tube otherwise there wouldn't be so many of them
left around.

Go to this excellent webpage :
http://www.nostalgiaair.org/NostalgiaAir/Articles/
and find the article on eye tube substitution (using voltage doubler to
run a 1629).

Of course, the 1629 is a single-indicator tube while the EM34 is a dual
indicator tube (with a different sensitivity in each section). But a
working 1629 is better than a non-working EM34. Be sure to compare the
base pin connections before applying any voltage.

Best regards,
Joe

I worked on RF hardware and software design of spread spectrum phones. The US government would have a serverly hard time decoding a spread spectrum signal phone (its easier to just tap the line...hehehe). The base unit passes the handset a "seed" this seed corresponds to a psuedo-random high speed code on which the multichipped audio stream is EX-OR'ed with. Also there are control signals passed back and forth between base and handset....not to mention channel selection...etc. Sounds complicated yet?.....well there is more.....Your receiver archetecture only takes care of the physical radio demodulation......there is the software layer that is the BIG unknown, that layer takes care of EVERYTHING, if you have no clue how or what it does you will be spinning your wheels for years.

Best Regards,
MacGmaN

I tried sending a reply by email but it bounced. Here it is:

Ron
This is a 19" rack mounted with continuous tuning between frequencies (no bandswitch). I assume
it was intended to receive AM as there are no BW adjustments or mode selections. There are connections in the rear for a recorder. It uses 13 tubes, all miniature except the rectifier and VR. There is a speaker in the front panel.
I have no documentation for it but there is a schematic pasted to the inside of the chassis bottom cover.
NEMS-Clarke receivers are sort of a special interest subject to which I am not tuned. The factory is in suburban Washington D.C.
Rgds,
John

Source record: 52986

Hello,

I have some 211 valves for sale. They are all NOS and labeled
'Haltron'. This was an UK label and they bought valves from others and
relabeled them. I have compared these valves to General Electric and
I'm pretty sure that it is the same valve.
I see that Antique Electronic supplies sell this valve for $ 182.70
each. My price is only US$ 150.- each (+shipping).
90 days guarantee and you can return the valve within 15 days if you
are not satisfied and get your money back.
E-mail me if interested.

Best regards,

Arnold Goksyr

Thanks John,

I was hoping it received FM, I'm looking for
something in that band that picks up FM & NBFM.
I forwarded your list to a friend that's looking for a
short rack. Maybe he'll contact you.

73, Ron

HA-6 and HA-2 with matching AC power supply. $250.00 plus shipping from zip 85650 (Arizona). But wait, there's more! Included is a HA-2 that either has been, or in the process of being, converted to 220 MHz. I got these units several years ago with the thought of getting them on the air but don't look like I'll make it. Previous owner said they were operational but I've not checked them out so offering them as is.

Appearancewise, minor scuffs on the cabinets and appears a previous owner glued a callsign decal onto the front panels. All but one of the callsign decals are gone and suspect with some care, the glue could be removed.

Good to know! Also, one of the bulbs is harder to reach than the others.
It's down behind the little window that illuminates the bandspread
indicator. You may need to loosen the case mounting screws and slide out the
chassis a bit to reach it.

Hi all. I have a Yaesu FT-50RD for sale. The unit works fine and
has never been abused. I have ALL the original packing, manual,
antenna and wall charger.

I'll even include the following battery packs, all tested good:

Quantity 2 FNB-47XH: 7.2V 1800MAH NIMH
FNB-49: 6V 600 MAH NICAD (original with radio)
FBA-15: AA cell holder for use with radio, looks like FNB-41

The reason for selling is that my aging eyes just can't read the tiny
print any more (sigh). Price is $225 plus shipping, firm. With the
included battery packs, this is a very good value.

I'm sure you'll like this tiny little powerhouse, don't miss out.
First money buys it.

Hi Al,
The original 1000LP filter had a cutoff at about 52 MHz so it could be
used on 6 meters. I know, because in the summer of '66 I used to
work at Drake and one of my jobs was to run those filters on a Gonset
G50 on 6 meters and set them so they had a good SWR on 6 meters !
The newer one, the 3300, had a more conventional cutoff of somewhere
in the 36 MHz range. My guess is they didn't need the "high priced"
labor to tune them up!!

Date: 2001-05-29 22:14:14 UTC
From: Ron Eisenbrey <ab5wg@mylinuxisp.com>
Message-ID: <3b141f0b$1@news3.mylinuxisp.com>
Source record: 52815

Acquired one of these today and do not need it. Anyone interested please send me an email. Case is rough, insides look very clean, all knobs etc intact. Will clean up real nice. No power cord.

Thanks,

Ron

Hey!

I have a real nice Browning Golden Eagle Mark III set for sale. Works good and looks good too. Even has some of the original Browning branded tubes in it Manual included. $350 ..prefer pickup in Lincoln, Nebraska or plus shipping. Will also consider trade for Drake ham gear....

Thanks es

Have original manual for Panadaptor PCA-2, Type T-200. It is entitled:
"Panoramic Handbook."
Just dug it up with some old stuff and thought it might be of value to
someone. Looks like its from the '40s?
Thanks,
Phil, kg6kb

Hi,

Your e-mail address is familiar; I may have made a purchase from you before, but I cannot remember you name. Anyway, would you consider selling the radio (with NB and calibrator) separately from the loop antenna? If so, would you ship it to NY for $300?

73,

Ron WA2EIO

It's a mica capacitor that has split open. You need to look at the schematic to find the value of it.

Does anybody know of a source for paint shaded "Heathkit Green" in a spray can. I haave an old Heathkit Apache that is mostly OK, but got russty on its lower right side where it got a bit damp on the rug it sat on (thanks to my cat). Other than custom mixed automotive enamel.what might work? BTW, the cat is banished to the outdoors now.

Then you have a good mercury high voltage rectifier. Just remember to
mount it vertically and heat it very well for several minutes before
you connect the HV. Otherwise you will have a a lot of sparks inside..
Be sure that the pins are clean and you have good contact with the
socket. The heater is only 2.5V at 5A and you can't afford to miss
many millivolts here because of dirty pins. Too low or too high heater
voltage destroys the cathode.

The jpegs looked fine here...
Thanks for keeping them small, John.

Definitely a Postage stamp Mica. Typical ranges in values were
91-510 pf. It still looks functional. Unless it's leaky, it might
still be readable.

The missing piece would have colored dots for identification, but
some of the most common values only had a unique body color.

> make it. Haven't for years.

You can still buy the CD4048 from TI and Fairchild, distributed thru
Digikey. I'm surprised this old metal gate CMOS is still riding the
bell shaped longevity curve, having been around for over thiry years.
Harris assimilated RCA, then TI grabbed Harris. National's logic line
is once again Fairchild.

Like vacuum tubes, you can find old semiconductors somewhere.

Just make sure you check the datecode on the Datak rub-ons...it should
be a four digit number giving the workweek and year (4393 = the 43 ww
of 1993)...Datak told me that anything past five years old -may- not
transfer even if stored at room temperature.

Hi Arnold,

You might try visiting Jura Apotheke in Bern (not too far from Luzern). Miroslav Kubala, the owner, used to post to the Joe List, but I haven't seen anything from him in some time. His webpage still has some hifi equipment listed. Check it out at http://www.jurapharmacy.ch/

Regards,

Raymond

hi folks, I am moving so I have to part out some stuff
I am selling following items:

Salora mod 4256 satellite tuner
Marantz SR220 receiver
Pioneer SX450 Receiver
Military signal generator TS413A/U tube based 50-1600 Hz
Hickok Transistor tester 1890M
Hallicrafters SX28 receiver (restoration project or part unit)
Racal RA17 receiver (works wounderful)
Racal LF adapter RA137A
National HRO 500 receiver (needs care)
Studer B62 pro reel to reel (same as The Beatles used!)
Weller AG707 hot air station
NAD 1020A preamplifier
TEAC X2000M reel to reel (high speed edition)

I might put some of them up on E-Bay
The stuff is located in Norway, so you better add approxamatly $100 on
post expences in case of one of the receivers.
Please feel fre to bid, you will pay actual shipping cost in addition.

Regards
Olav

5102. Auto Tube Radio Design Question

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-05-31 12:10:50 UTC
From: Bob Balonis <rmborcmb@penn.com>
Message-ID: <etqR6.2039$C64.1191605@nntp1.onemain.com>
Source record: 52862

Hi all,

Recently did a little repair work on two old car tube radios (circa late 50s). While the problems turned out to be simple, ran across a component design that I did not understand the function of & was wondering if anyone can provide info.

Each radio had two +power leads (one for dial lighting and one for switched radio power) and after entering the radio, each was soldered to the center of a flat copper plate (approx 1.5" by 1.5") which was mounted directly to the chassis. The wire, from the same solder point then continued to the switch, etc. The plate was not screwed or bolted to the chassis, but appeared be in firm contact with the chassis (no adhesive obvious adhesive, but obviously must have been there). In all four cases there was no continuity between the chassis and plate - there was obviously a dielectric (however could not clearly seen any) on the back side of the plate. What is the function of this? Seems a strange design in that it sure looked like an point that would be very prone to shorting the plate to the chassis ground.

Regards, Bob

5103. Antenna T-Match Tuner design

Newsgroup: rec.radio.amateur.boatanchors

Message-ID: <9f5h84$1lq$6@uranium.btinternet.com>
Source record: 52863

NEW PROGRAM " T_TUNER.exe "

This program assists with selecting maximum component values
necessary to secure an impedance match when confronted with a
specified wide range of feeder or antenna input impedances.

For given coil and capacitor Q's, and power input, the power
dissipated and lost in each component is calculated. Also all
currents and voltages.

Input and ouput image impedances are calculated. The program will
demonstrate that the output image impedance is the conjugate of the
feedline input imedance. By first of all setting Q values to
infinity, it will also demonstrate that when a conjugate match
exists at one end of a network a conjugate match will exist at the
other end only when the network is lossless. Or conversely, if a
conjugate match exists at one end of a lossy network, a conjugate
match cannot exist at the other end.

51 kilobytes. One file only. Not zipped up. Download program
T_MATCH in a few seconds. Run immediately.

>The plate is a capacitor. The purpose was ignition noise suppression.

Actually, the plate served two purposes. It was identified as a "spark plate" on most schematics of the period. It provided a fixed air gap in several spots so that the reverse kick from the starter motor would be safely discharged. It also served as a capacitor to bypass HF noise in the line, but obviously that could have been done with a much simpler part. Some of the spark plates had several layers, with holes in the dialectric separators which formed spark gaps. Must have been huge currents flowing when the back EMF got shunted to ground.

That's part of a "hash" filter, designed to suppress vibrator noise to keep it from radiating and getting into the battery line. You are correct, it is a capacitor. Amazing things those vibrators were... I remember replacing them in car radios as a kid when I worked for the local radio-tv repair shop on Saturdays. We had a car radio deal in which we replaced the vibrator, 0Z4 rectifier and the buffer capacitors... a "Saturday Special". Guess who got to pull the radios out!

Same here. I worked for a TV/Radio shop after school and during the summer from 1954 to 1957. I got so tired of writing, "Replace vibrator, 0Z4 and buffer cap" that I had a rubber stamp made. No doubt you also learned "the position" on back on front seat, legs over the seat back head under the dash. Then you pulled the cover and all the accumulated dust fell in your eyes. As I recall, Fords and GM cars were fairly easy, Chrysler products were a bear.

>>snip>>

Quite true - anyone can try and sell at any price they wish to. I just hope that none of you guys on this ng actually buy anything at these prices, because if we ever get a market for vintage radio items at this sort of level it screws it up for all collector/restorers - though the dealers will no doubt love it.

Of course whatever radios change hands for, you let the required amount of money out when you buy and get it back when you sell - that is not a problem. The problem with having expensive radios is we are suddenly sitting on a much more valuable asset. We are more likely to be a target for thieves, whether that be breaking into our homes/shacks to steal the stuff, or pinching stuff when its on display to the public. And then of course our insurance costs go up to match. In addition, I for one do not want to have to buy and sell expensive items - I do not want to have to manage an account for my hobby where ten of thousands of dollars (well pounds in my case) are flowing in and out each year.

So - please say no to silly prices like these. In the case of this guy, everything he is selling is available in the UK in better condition at a fraction of the cost he is asking. So do yourselves a favour and give him the big thumbs down.

Hi Everyone,

I Just wanted to remind everyone that tomorrow night Thursday May 31st is the next 5th Thursday Collins Collectors Association AM Night. We will be starting at 08:00PM CDT on 3885 kcs. Jim W0NKL will be master of ceremonies for the evening with others assisting. Remember! Damn the Static! Full Speed Ahead. (my apologies to the originators but I thought it was close) Please come and join us tomorrow evening. We have ordered a static free evening from the same people that ordered Fridays WX at Dayton.. They assured us that THIS time they would get it right! Stop by and see how close they were.

73's
Larry WA9VRH
Assistant Net Manager
VP, Collins Collectors Association

P.S. Remember the Collins Collectors Associations First Wednesday AM Night on June 6th. Starting at 2330 on 3880 kcs with our East Coast Anchor then moving across the county by time zone! 73's Larry

Hello--
The hardest-to-get-at radio I ever removed, repaired and replaced resided in a 1961 Ford convertible with air conditioning. To this day, I believe that Ford hung the radio in space and assembled the rest of the car around it.

73--
Brad AA1IP

5120. Heath SB-104A Station, Very nice

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-01 00:22:23 UTC
From: David McCombs <dmccombs@houston.rr.com>
Message-ID: <3fBR6.65174$y_3.17682931@typhoon.austin.rr.com>
Source record: 52879

For sale: Beautiful SB-104A , SB-604 Speaker, SB-634 Station Console, HP-1144 power supply. I use this station every day is it performs perfectly. SB-104A receives excellent and I get great audio reports. Here is the total run down on the equipment:

SB-104A - Serviced by RTO in June of 00. Perfect in every way with exception to ONE thing. Upon first power up when the unit is cold, the digital display takes about 5 seconds to fully populate. Typically the first two digits come up immediately, a few seconds later two other digits, a few seconds later the last two digits come up. It ALWAYS comes completely up and never a problem after the first 5 seconds or so. This does not affect the receiver. Other than that , it's perfect. This unit is very nice with a beautiful face and case. It has been very well cared for and is the best I've seen or used.
SB-604 Speaker - Excellent.
SB-614 Station Console. I seldom use this unit. It is a nice unit. Meter functions are perfect. Digital display contains 24 hour clock and 10 min timer. Digits are a bit flashy and could use some work, but still looks good. It's just not as bright as the 104A display. Keeps perfect time. Console also contains a phone patch. Phone patch worked fine last time used. (it's been several years) HP-1144 - mounted inside the speaker. What can I say, it's a power supply. It works perfect.

Assembly and operation manuals for the SB-104A
Assembly manual for the speaker,console and power supply.

No Mic.

Total package - $435.00 + shipping and materials. I am confident you will be elated with this station. Paypal ok.

.... Pictures upon request ....

> either.
>

Cutting-and-pasting copy is one thing, but I don't think you can legitimately object to his linking to your website. If you don't want people to link to your page from any place they want, for whatever reasons they may have, don't put it on the Internet.

Besides, imitation is the sincerest form of flattery, right? (I seem to have inadvertently turned the Tek 492 spectrum analyzer into a collector's item: compare the text and formatting of http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1602139529 with my earlier, closed auction at http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1238132522.)

You could send him a nasty note warning him against stealing your copy, but that's about all. If you're considered an authority on the SX-88, this goes with the territory.

Richard Hankins wrote:

> So - please say no to silly prices like these. In the case of this guy,
> everything he is selling is available in the UK in better condition at a
> fraction of the cost he is asking.

Yes: I agree. And also check the actual condition, very, very carefully.

I happen to be very familiar with the R107 (1940s vintage British Army Receiver). I presently own one; my second actually. They typically cost around 100 quid (roughly 240 dollars Canadian) in reasonable condition. Maybe I would go to 200 quid for a perfect one. They weigh about 95 pounds btw!

So I emailed some pertinent comments regarding the external alterations that could be observed of the one pictured on that web site.

For example; a meter had been added, using what looked like a US manufactured meter movement, in place of the watch holder. Many of the front panel knobs had been changed, two support 'posts' at the bottom corners of the front panel had been removed etc. etc. There was no mention of the removable steel cover that could be secured over the front of the metal case, not unusual that it was missing, but it was part of the original unit. The external appearance was therefore anything but original. This was several months ago. As of recent date the wording describing the set as 'original' or 'close to original' has not been changed.

If that is not the unit actually being sold, the text could have said something along the lines of "Pictured is a typical R107 incorporating modifications by a previous owner/s. This is not the unit for sale".

On the other hand there is some useful comment in regard to the R1155 receiver pictured regarding the power supply required and that the Direction Finding section, often removed by modifiers, is complete. Assuming that the R1155 pictured is one for sale the external condition looks like about a five (5) IMHO.
Anyone buying such a unit on this side of the pond and then finding it 'Not as described' would probably have a devil of a time sending it back!

I did notice that a not very rare Eddystone had a significant price reduction recently when it was offered on eBay in comparison to what the aforementioned site still lists as the price.

Maybe the message is getting through; however one wonders if the selling outfit is really knowledgeable. The words: Rare", "Unusual", "Chance to

own" etc. are used more frequently in my opinion than warranted. More like a sales pitch than a real analysis.

By contrast a few minutes ago looked at another vendor who seems to describe very accurately. Admitting, in regard to cosmetic condition, for example, to incorrect non-original knobs, scratches and worn front panels etc.

Just a few thoughts.

FOR SALE Station Radio C13 (HF Transmitter/Receiver).
This is a finely engineered,top quality, HF Transceiving Station,produced for the British Military,almost without regard for cost.
This installation, which is currently in stock at radio-exports.com,is the complete radio station outfit.

Frequency coverage is 1.5Mc's to 12Mc's on RT and CW.
Maximum Power Output 30 Watts.

The station is comprised of the following units:-
Transmitter/Receiver
24 volt dc input Power Supply,
ATU,
Antenna Base
Junction Box and Operators Control Box
Headset (headphones +mic.),and Morse Key
Full set of interconnecting Plugs and Cables,dc Input Cables and a remote Antenna Cable.
Two, correct, Steel Mounting Trays, onto which the various units can be secured,in order that the station can be moved as a single unit and also for mobile installation in a vehicle.
The original user handbook.

The condition of this equipment is excellent,in fact the best example we have seen.
It is in good working order.
If you are a serious collector of military sets and want only the best examples,then this particular C13 Transmitter/Receiver Station is most certainly the one for you.

This is ruggedly constructed equipment designed to withstand battlefield use,so it is rather heavy.Fortunately,we have access to very competative shipping,so you will be pleased to know that
the price for the whole station,including packing and air freight to the USA,is only $895 US Dollars.

For more information or to order,please contact Graham Leo
info@radio-exports.com

Thank you for your interest .

I realize that this is a "rare", unbuilt Heathkit, which
I myself would like to build, but I could do without all of
the hype which is obviously aimed at driving up the bidding war prices on
Ebay. "It will be auctioned this fall..." or some such thing; give me a break!

We're not supposed to use HTML on this group. It wastes bandwidth and
just shows up as Unix jibberish on most people's newsreader screens.

Insert foot in mouth mode, if you post the full url, in plain text. it
does become a clickable link to the majority of readers. It doesn't
mean that the posting is in HTML..

If it doesn't in your news reader then maybe that's a feature of your
program, but to state that posting the full URL means you have to post
in HTML does show your lack of knowledge OM

Hello,

I have some 211 valves for sale. They are all NOS and unused, and they
are labeled 'Haltron'. This was an UK brand who bought valves and
relabeled them. They didn't make valves themself.
I have compared these valves to General Electric VT-4C and I'm pretty
sure that it is the same valve.
I see that Antique Electronic supplies sell this valve for $ 182.70
each. My price is only US$ 150.- each (+shipping).
90 days guarantee and you can return the valve within 15 days if you
are not satisfied, and get your money back.
E-mail me if interested.

Best regards,

Arnold Goks&#65533;yr

DEMOSTENES - N6899 Balestrand, Norway
Tlf. +47 5769 1340 Fax +47 5769 1267

Not true in the case of IE 5.5. It picks it up fine without the http://. Some links it will go to without even the www, although I suspect that's more of a search-type function as opposed to a hard url.

I use a freeware text only newsreader, not a fancy one like Free Agent,
so I have to cut and paste anyway. But I'm an old school net user, I
still type in addresses with the http in front, like you had to do in
the old days before you had smart browsers that added http and www and
.com and everything else. :)

I wouldn't have had any problem at all if he had said something like, "For more information, see the web page at http://antiqueradio.org/halli09.htm ."

What I object to is people ripping off whole paragraphs from my articles without attribution -- especially when they're making money in the process. Grow up and spend three minutes to write your own description, for Pete's sake, instead of swiping someone else's homework :-)

I did exchange some mail with the seller and cordially suggested more polite ways to quote from the websites of others.

Incidentally, I don't consider myself an authority on anything. I just enjoy writing about radios that I have restored.

The IFR FM/AM 1000 S Communications Service Monitor integrates the functions of several test instruments into a single compact and portable unit.

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1603469202

* Signal Generator 100 Hz - 999.9999 MHz
* -133 dBm to -33 dBm
* Communications Receiver 1 - 999.9999 MHz , AM / FM / SSB
* Sensitivity typically 1 uV
* displays frequency error, deviation
* BFO +/- 1.5 kHz
* Power Measurement 0 - 10 / 0 - 100 Watts direct reading to 225 MHz
* Internal Oscilloscope
* Spectrum Analyzer
* Internal Battery

The hinged top compartment provides plenty of space for the power cable, antenna, test cables and alignment tools. Comes complete with AC and DC power cables.

Feel free to email me with any questions. Thank you for looking, and Happy Bidding!

5157. Motorboating at higher volume with strong signal

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-02 13:15:21 UTC
From: n4buq@aol.com
Message-ID: <20010602091521.05514.00002681@ng-cf1.aol.com>
Source record: 52768

I just finished rebuilding my RCA 6K3 last night and powered it up. Everything seems to be working fine except for when I have a strong AM signal and turn up the volume past about 1/3, it starts motorboating.

Can someone tell me what exactly is "motorboating"? Is it the AVC pumping rapidly?

What are some things I can try to eliminate this? Are there some "standard" fixes for it?

Thanks,

Barry - N4BUQ

>Can someone tell me what exactly is "motorboating"? Is it the AVC pumping
>rapidly?

Motorboating is an oscillation, obviously caused by unwanted feedback. From your description of the symptoms, I suspect it is being caused by inadequate power supply filtering. As you increase the volume, the amplifier circuit draws more current causing a voltage drop on the power supply, which various earlier stages that use the same DC supply, pass on to following circuits as a signal level change. The AVC apparently reduces the gain, dropping the signal level, and starting the process all over again resulting in the low frequency oscillation.

I don't know what a RCA 6K3 is, but put more filter capacitor on the PS. "More" is a relative thing depending on the PS load.

Don

5165. Vintage Receivers to Hamcom

Source record: 52775

I am continuing to thin out my collection of vintage receivers. I will deliver these receivers to Hamcom in Arlington, Texas on June 8th and 9th if someone wants them. I really don't want to ship them.
1. TMC GPR-90 Communications Receiver, nice condition, very early model without the crystal calibrator, in original cabinet with original manual. See on page 408 of Osterman's book on receivers. It is listed as "very scarce".
Price is $700 delivered to Hamcom.

2. Racal RA-17C-12 Communications Receiver. This is the North American Version with American Tubes, S-Meter, More Audio Output, Coaxial Connectors, etc. It is in very nice shape with top cover, copy of manual, and Racal Brochure. Stability is super with the Wadly Loop. See on page 329 of Osterman. It is listed as "scarce".
Price is $800 delivered to Hamcom.

Digital Pictures are available of both of these receivers upon request. They both work great on all bands.
Thanks, Charlie Hugg, K5MBX
Abilene, Texas

Many of that generation of RCAs used an additional cap of about .25 in
parallel with the filter caps, or from the B+ line to ground. If it is
missing, or hasn't been replaced, that may be your cure.

5167. FS FM board for FT-901D Yaesu

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-02 16:38:38 UTC
From: k4gj <k4gj@infi.net>
Message-ID: <9fb4nf$7e9$1@slb5.atl.mindspring.net>
Source record: 52777
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

FM board for 901D. Last board left after parting a 901 out.
Looks OK, but no guarantees. Not lightning struck, and appears to be complete.
Sold as-is, since I can't test it. $25 shipped Priority Mail/ insured to any USA Zip. 73, K4GJ

5168. Still looking for an S-29 and SX-28 parts radio

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-02 17:43:04 UTC
From: John <jh.lewis@worldnet.att.net>
Message-ID: <IA9S6.59272$t12.4699306@bgtnsc05-news.ops.worldnet.att.net>
Source record: 52779

Looking for a nice condition (prefer working) Hallicrafters S-29 and a SX-28 parts radio.

Thanks,

John
St. Louis, Mo.

5170. FS: National AC-500 PS for NCX-500 Transceiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-02 17:52:49 UTC
From: Bruce Stock <stockb@accessone.com>
Message-ID: <RJ9S6.54461$FS3.608223@sjc-read.news.verio.net>
Source record: 52780

I don't have the matching transceiver, so this Power Supply has only been bench-tested. Everything appears to work, with the following (unloaded) output voltages: HV= 1150 vdc, LV= 475 vdc, Bias= -115 vdc, Fil= 12.6 vac.

See picture at: http://myweb.accessone.com/~stockb/misc/ac500.jpg

Price $65 plus shipping from 98144. Or will trade even, for a Heath HP-23 power supply.

73, Bruce AB7YD

Also just copy the URL from your browser "location" box or "address" box
and then paste it in your E-Mail -- no mis-typing or worry whether you
need http, capital or lower case, tildes, slashes etc -- some browsers
need the http -- others not. Just copy and paste!

Can't tell you how many times a NG reference to a URL has been wrong.

Source record: 52782

Hmmm, The PS originally had a 10mfd before the field (choke) and an 18mfd after it. 18mfd aren't common anymore so I used a 22mfd in its place, so I already have more C in the filter.

Someone suggested an additional 0.25 cap on the B+ line. Perhaps that will work. I've found that touching the 'scope probe to thge grid cap of the IF tube seems to stop it. That's probably either changing the bias or adding some C. I'm not sure which is doing the job.

The 6K3 is a 6-tube radio. The detector is a dual diode which is used as the detector and the AVC provider. I tried pulling this tube and using a germanium diode for the detector and the set does not motorboat; however, if I replace the AVC diode with another germanium diode, the set loses its sensitivity and the signal becomes very distorted.

I'll keep looking...

Thanks,

Barry - N4BUQ

The logic with the .25 is to give a more effective return path than the
BIG caps present. They are not very 'direct' physically at the IF freq,
which probably where it is oscillating, IIRC. That cap should appear on
the diagram.

5174. FA Collins F455 FA21 Mechanical Filter with Marconi XH14 HF-SSB receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-02 19:30:45 UTC
From: Steve Lenaghan <SteveLenaghan@southwest-telephone.com>
Message-ID: <3B193EE4.C1C8822A@southwest-telephone.com>
Source record: 52784

Collins F455 FA21 Mechanical Filter

Includes free Marconi XH14 Receiver !!, Filter available without radio
if requested

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1243109206

Reference for Mechanical Filter at http://www.wa3key.com/filters.html

TECHNICAL SUMMARY
Equipment Dual channel transistorized superhetrodyne receiver for single
sideband (SSB) and/or amplitude modulation (AM) operation

Type Number DOT Type No. CMC 6904 (Canadian Marconi Model No. XH14)

DOT Type approval RSS 122

Frequency Range1.6 MHz to 24 MHz

Intermediate Frequency 455 KHz

Frequency Stability
At ambient temperature of 0ï¿½ to + 50ï¿½C better than 1 ppm
At ambient temperature of -30ï¿½C to + 60ï¿½ C and +/- 10% supply voltage
better than 2 ppm

Power Requirements
Receiver circuit only 9.6VDC:150 MA
Receiver with xtal ovens: 7W average
Receiver on AC- 30VA

RF Channels 1 or 2
(2nd channel available for opposite sideband or separate frequency up to
l% from 1st channel)

Sensitivity
SSB: 0.5 uV for 12 db (S+N+D)/N
AM: 1.0 uV for 6 db (S+N+D)/N

Selectivity
SSB: 2.0 KHz at 6 db down and 6.0 Khz at 60 db down
AM: 6.0 Khz at 6 db down and 30.0 Khz at 60 db down

Spurious Response Rejection
IF (455 KHz) better than 90 db down
RF Below 10 MHz: all better than 60 db down
RF Above 10 MHz: all better than 50 db down

Radiation:
At Antenna Terminal IF: less than 1.0 uV all others less than 20 uV
To next Receiver IF: un-measurable, all others less than 1.0 uV

Speech Clarifier Range
1.6 to 4.0 MHz + 0.002%
4 to 24.0 MHz + 0.005%

Operating Temperature Range -30ï¿½C to +60 C, Warm -up period - less than 5 minutes

Type of Reception
6A3 - AM
A3H Compatible AM
A3J Suppressed carrier SSB

MeteringMeter selection of signal level or AF Line Output

AF Output 11 dbm at 5% distortion to 600 ohm balanced line
I watt at 5% distortion via loudspeaker amplifier, accessory not available

AGC Range Output varies less than 12 db for signal variations between 5 uV and I volt

AGC Response 100 milliseconds

Hum and NoiseBetter than 40 db below rated output

Long Term Stability Better than 1 ppm per month

Remote Control Provides operation of SSB/AM Mode Switch and Motordriven Speech Clarifier via the AF output line - one per receiver

Crystal Information
Beat Frequency Oscillator - 453.500 KHz
High Frequency Oscillator Crystal is selected for desired channel of operation

AM or USB
Fx = Fc - 453.5 for AM or
Fx = Fc + 453.5 for LSB

where- Fx = Xtal Frequency, Fc = Carrier Frequency

All crystals may be ordered as per CMC Drawing 188-151. Specify LSB or USB and frequency.

Voice Operated Squelch
Input sensitivity 6 db (S+N+D)/(N+D) for an input of 10 mv
Dynamic range will trigger for 7 db (S+N+D)/(N+D) worst case over a signal input range of 40 db

A coil kits is included but again first come first serve based on availability.
1.6 - 2.25 MHz, @ 2

2.25 - 3.25 MHz @ 1
3.25 - 4.6 MHz not available
6.6 - 6.4 MHz @ 3
6.4 - 9.0 MHz not available
All include Collins 455 KHz SSB mechanical filters
A manual is available for copying at cost.

All prices in US Dollars

Shipping by prepaid Canada Post minimum.
There may be brokerage charges, these are the responsibility of the buyer.

There is a $5 packing fee

AMEX and Master Card ONLY

5175. crystal board for Drake DR7 receiver

I have a new aux ckt card which holds
several receive cryatals for a Drake DR7 receiver.
$20 plus shipping or trade for octal relay sockets
with screw terminals.

Steve

5176. Re: Motorboating at higher volume with strong signal

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-02 20:59:23 UTC
From: Reg Edwards <g4fgq.regp@btinternet.com>
Message-ID: <9fbk25$ek6$1@neptunium.btinternet.com>
Source record: 52787

Motorboating is usually caused by feedback from the output audio
stage plate circuit to an earlier stage in the receiver.

The final plate and earlier stage have the HT DC supply internal
impedance in common. The HT internal supply is a feedback
resistance.

Connect another 8 or 16uF capacitor across the HT supply. OR
reduce the grid capacitor in the PA to 1/4 of its present value. Or
reduce the grid resistor to 1/4 of its present value. Do anything
to reduce the loop gain at the very low oscillation frequency.

HQ-129X with matching speaker. A very clean receiver which works perfectly. $150

HQ-170 and parts HQ-170. Good (not great) condition. $145

HQ-145A works extremely well. There is a spot repainted on the front panel which is the right color but can be noticed. $135

SX-110 works extremely well. Front panel is very good. Dial numbers are perfect. It does have some scratches on the case (not bad). $115.00

All prices are firm and do not include UPS charges from 92101.

John, K6KOI

Hello group- If you have any 6SN7 and 5687 tubes that are surplus to your needs, perhaps I am interested.

Most brands/configurations are acceptable.

6SN7 NOS or strong-testing on both triode sections, used.

5687 prefer NOS Tung-Sol and Raytheon brands (un-used) only

Please reply via email with particulars should you have any to sell.

Thanks for the read :o)

Kind regards, Joe Pratt

Hi Joe,

I have some used 6SN7s, how many do you need?
And since we both have TV-7s, where do you want
the minimum test reading to be.

I'll bet I can supply 20 or so. We'll trade for something
if you want.

Let me know senor!

Best wishes,

Jim McShane

5202. 807 Oscillator Information

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-03 14:09:06 UTC
From: TCNET058@ysub.ysu.edu
Message-ID: <4828EC2S86.TCNET058@ysub.ysu.edu>
Source record: 52713

Recently I aquired a pair of RCA Model UL-4392 807 tube crystal controlled oscillators. I think these were out of a RCA BTA-5F AM transmitter. I drew up a diagram, but there is a part in the thing I cannot identify.

If anyone has any information on this thing it would be of great help as I would like to fire it up on 160 meters.

Also, does anyone have a 160 meter crystal laying in a junk box they would part with? I have lots of 80 and 40 meter xtals, but nothing for 160.

Thanks for reading this.

Source record: 52720

Hello all,
I am offering my Johnson 500 RF Deck up for sale. I bought it as a project a couple years ago without the P.S./Modulator. It was tested on a working PS and seemed fine. After aquiring an old broadcast xmitter the project got shelved and I no longer need the unit. The front panel does have some scratches- I guess overall about a 7 or 8 out of 10 on condition. The case was stripped and powder coated by the previous owner but never painted the original Johnson maroon color. It is now a primer gray color.The chassis is in nice shape and appears original with no hacking or crazy modifications. I also have the original Johnson 500 manual. I want $1000 plus shipping for the unit. I will also take partial trades. I am looking for a Power Supply and rack mount kit for a KWM2. I also need a UXR-96 receive module for an ICOM IC-970 VHF/UHF rig. Also needed are two ICOM SP-20 speakers. Check out pictures of this rig @ http://members.aol.com/~jimmoci/johnson500.html
Thanks you & 73
Jim

P.S. For those not familiar with this unit it is just the RF Deck. There is no Power Supply/Modulator. THIS IS NOT A PLUG AND PLAY UNIT. You will need to build or buy a P.S. and modulator to make it work. It is sold as is because it is a 45 year old boatanchor!

Check this one out on fleaBay. Sorry I missed the item number, but just search on "HRO" and "homebrew" to find it. It's got almost a week to go.

Someone completely sorry-stated an HRO. Actually did a very neat job of it, but looks like he cannibalized another set in the process, way back when. Very good pictures.

Job was done in 1970s by an SK. I'll let you guys argue over the ambient temperature at his current QTH :-). --Mike K. AA1UK

For Sale: R-390A/URR Receiver.

Details: 67 EAC totally remanufactured by Chuck Rippel June, 2000.

Has the solid state ballast tube module (adjustable type)
IERC tube shields.
.08 mv sensitivity -140dbm noise floor
Progressitron PTO
Bud Cabinet with hinged top lid, painted matte black.
The most stable R-390A I have ever owned, under 100 hz drift
from cold start to 1 hour.
rectifiers are solid state 3 amp type.
Complete front panel repaint job.
This is the finest R-390A I have ever owned/operated. I have
owned 33 R-390A's over the years.
I am selling this receiver reluctantly because of chronic lower
back problems.
Purchaser will receive many extras, tubes, manual, a custom made
6 ft. PL-259 to Twinax cable.
$1,200.00 plus shipping from 39501.

Super Pro

I need a schematic of a RF Communications model rf-301
I was told it is a Harris Unit
also know as a an/urc-58
Does anyone have any info?

Thanks
KA7HPG/3

5221. NAAFI pronounced "Naffy". Reference the Magneta receiver on sale by 'Export radio'.ut.

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-03 23:17:39 UTC
From: Terry S <tsanford@nf.sympatico.ca>
Message-ID: <3B1AC593.3B51C19A@nf.sympatico.ca>
Source record: 52732

The initials if I recall correctlty stood for "National Army Air Force Institute". (NAAFI). Their canteens and their vans, often painted in military drab colours, were a feature of World War II.
So the word "Naffy" or even the abbreviation "Naff" entered the language.
Terry.

5222. Racal RA17C-12 and GPR-90 FS

Source record: 52733

I will deliver these receivers to Hamcom in Arlington, Texas on June 8th and 9th if
someone wants them. I really don't want to ship.
1. TMC GPR-90 Communications Receiver, nice condition, very early model without the crystal calibrator, in original cabinet with original manual. See on page 408 of Osterman's book on receivers. It is listed as "very scarce".
Price is $700 delivered to Hamcom.
2. Racal RA-17C-12 Communications Receiver. This is the North American Version with American Tubes, S-Meter, More Audio Output, Coaxial Connectors, etc. It is in very nice shape with top cover, copy of manual, and Racal Brochure.
Stability is super with the Wadly Loop. See on page 329 of Osterman. It is listed as "scarce".
Price is $800 delivered to Hamcom.
Digital Pictures are available of both of these receivers upon request. They both work great on all bands.
Thanks, Charlie Hugg, K5MBX
Abilene, Texas

5228. Need Manual for Yaesu FL-200B Transmitter (not amplifier)

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-04 02:27:20 UTC
From: vibroplex@mindspring.com
Message-ID: <d7d0c297.0106031827.368a818e@posting.google.com>
Source record: 52739

Dear All,

I just picked up an old Yaesu FL-200B transmitter. I know the model number sounds like an amplifier but it's just a transmitter. I'm trying to find a manual for it. I checked Tannenbaum, W7FG, and Pete Markavage's online catalogs and I didn't see one listed. I did find the paged scanned in on the "bama" site which is helpful but they don't print out very well (the image size is larger than a regular 8.5 x 11 page). Does anyone know who sells a manual for this transmitter? If you have one, I'd be happy to pay copying costs and postage if you will make one for me.

Thanks for any help you can give me as I'd like to get this radio back on the air!

73,

Derek Cohn

Source record: 52740

For Sale:

Drake RV-3 Remote VFO and Speaker unit. Nice condition. Chassis is still a nice copper color. Cabinet has no rust. Has a few scratches, but not deep. Front panel is very tidy. Knobs are original and the unit is complete. Great addition for the TR-XX line of transceivers. No manual. Figure shipping on about 12 lbs from my zip 95827 at http://www.ups.com or same amount via priority mail at http://www.usps.com I will box properly for either mode of transportation. The unit is excess to my needs. $140 plus shipping as noted.

tnx for the read es 73 Check or MO is fine.

Bob, KE6F

FS: I have 3 Collins receivers that I am going to sell as one lot. All 3 receivers have 9.5+ front panels with original knobs and are very clean. They all work and there are manuals for each one. I am taking them to the Ham-Com ARRL Convention in Dallas next weekend to sell for $1200/all and are the following models: 75S-1, 75A-2, & 75A-3. This is a good chance to take the one you want and sell off the rest. If I don't sell them between now and next Thursday you can see them on the table there.

Source record: 52655
Cross-posted to: alt.ham-radio.marketplace,rec.radio.swap,rec.ham-radio.swap,rec.radio.amateur.boatanchors

FOR SALE
Yaesu FT-101EE HF transceiver with original manual, microphone and AC power cable.
160 through 10m plus 11m SSB, CW, AM and digital modes. Has built-in 120V AC and 12V DC power supplies, MOX, VOX, PTT, NB, RF ATT, RIT and calibrator for 25 kHz and 100 kHz markers. Metering for plate current, ALC and power output level. This radio also has phone patch connectors in back.

This rig sparkles! It still has the original plastic on the faceplate and the front panel is completely mint. Handle is intact. There are no scratches anywhere on the cabinet.

This is, without a doubt, the best looking, and best working FT-101EE I have seen in years. Looks like it has hardly been used since new. Plastic is still on the front panel which is immaculate.

Works fine on all bands, and all functions are working properly.

Will sell for $325.00 plus shipping

Picture and details available on my web site at:

http://home.cfl.rr.com/happysurfer/trade.htm

Super clean, all original, clean build.
has SSB, CW, and wide AM 5KC filter
all bands within 1.5 KC, extremely stable.
This is one of the late one's of its line, it's more sugar blue than olive
green !
$225 or $150 (without AM filter)

Looking for "good" R-390A
(long Island)

From: Larry Saletzki <wa9vrh@ocslink.com>
Message-ID: <9fh7ol$m5d$1@news.dpc.net>
Source record: 52662

Hi everyone here is the plan for June's First Wednesday CCA AM night on 3880kcs.

NOTE: We are going back to our one hour per timezone during the Summer months!

REMEMBER you DO NOT have to be running Collins gear to checkin. Everything is welcome!

We will have 4 main ncs. One on the East coast, Midwest, Mountain area, and West coast. The main ncs will have others in their area helping with their hour. (Please note ONE HOUR). At the end of their hour the main ncs for that region will contact the next regions ncs and turn ncs over to them etc.
etc. etc.

Each ncs will start at 08:00pm in their time zone.

Starting at 8:00pm EDT (0000 UTC) East coast ncs will start the net
At 01:00 UTC East coast ncs will turn ncs to Midwest ncs
At 02:00 UTC Midwest ncs will turn ncs to Mountain ncs
At 03:00 UTC Mountain ncs will turn ncs to West coast ncs

comments please to wa9vrh@ocslink.com

Have fun and enjoy the great sounding AM signals. 73's Larry WA9VRH

5253. RE Tektronix 555 dual beam scope

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-05 00:50:17 UTC
From: millerke6f@aol.com
Message-ID: <20010604205017.23809.00002782@ng-df1.aol.com>
Source record: 52663

Hi All

Well I made a big big big mistake. I went to Livermore this weekend and for reasons that I cannot state I managed to purchase and transport home a hooooooge Tektronix 555 dual beam scope complete with cart AND external power supply. I figured that I could use the cart to roll my Tek 7904 around on or use it as a roll around painting scaffold--

Now the real problem isn't the fact that I bought the beast; the real problem is that I plugged it in before I started the dismantaling process and the damn thing worked just fine with all functions reporting as specified in some manual living far far away.

It even came with a couple of plug ins to include an OP-AMP plug in that allows you to design a pair of cool OP-AMP configurations on the fly. Now that's a nice toy. Unfortunately it's all tube stuff and I don't want hazard a guess as to the total power drain of this monster in our present California Power Crisis. But to keep this tale of woe as short as possibe. I just cant bring myself to tear this thing up for the few zillion tubes that lay under its old blue skin....even if they are desired by the Audio Phreaks for their "SONIC" essence.

But before I try to find a place in my already bloated garage for this Elvis weight class icon, perhaps some of you folks could fill me in on this unit's specifications and the signifcance of the dual beam vs the more conventional electronic switch schemes.

Thanks to all for the read

Bob Miller

From: jimmoci@aol.com
Message-ID: <20010604222922.02410.00000646@ng-cm1.aol.com>
Source record: 52667

Hello all,
I am offering my Johnson 500 RF Deck up for sale. I bought it as a project a couple years ago without the P.S./Modulator. It was tested on a working PS and seemed fine. After aquiring an old broadcast xmitter the project got shelved and I no longer need the unit. The front panel does have some scratches- I guess overall about a 7 or 8 out of 10 on condition. The case was stripped and powder coated by the previous owner but never painted the original Johnson maroon color. It is now a primer gray color.The chassis is in nice shape and appears original with no hacking or crazy modifications. I also have the original Johnson 500 manual. I want $1000 plus shipping for the unit. I will also take partial trades. I am looking for a Power Supply and rack mount kit for a KWM2. I also need a UXR-96 receive module for an ICOM IC-970 VHF/UHF rig. Also needed are two ICOM SP-20 speakers. Check out pictures of this rig @ http://members.aol.com/~jimmoci/johnson500.html
Thank you & 73
Jim

P.S. For those not familiar with this unit it is just the RF Deck. There is no Power Supply/Modulator. THIS IS NOT A PLUG AND PLAY UNIT. You will need to build or buy a P.S. and modulator to make it work. It is sold as is because it is a 45 year old boatanchor!

Back in the early '70s I did similar kinds of things...modifying pre-war and WWII equipment, cannibalizing a bc-453 in an attempt to build a panoramic scope, etc. Back then a Super-Pro or an SX-28 was only about as old as an early model Yaesu or Kenwood would be today. I wonder what people will be doing to some of these PC interfaced transceivers in 30 years, and what people will think of those who made these modifications 60 years from now...

I saw that HRO, and I thought it was rather cool (although the one I bid on, and was WAAAYYY outbid on was the one which had only 2 months use and was just like new...)

Source record: 52678

Hi,

I would echo what you have said. One of the major reasons I'm here restoring old radios is the stuff I did to them back in the 60's and 70's. Based on the example set in the 40's and 50's I didn't give a second thought to tearing up a piece of surplus gear to turn it into what ever I thought I needed.

The stuff I did taught me a lot about electronics in general and tube electronics in depth. The money I spend today on boat anchors comes from my job in electronics. The skills I use are the same ones I learned back in the 70's.

Certainly if I had the same stuff today I *might* not do the same things to it. I can afford to spend more than $20 on a radio today, that makes a difference as well. I have no regrets at all for the stuff I did back then. Based on the government's other actions if we had not been buying all those radios they would have used them for land fill.

Just my 2 cents worth.

Bob

What about BAMA?

http://bama.sbc.edu/heath.htm

They have the full schematic and most of the manual. Since your only
trying to fix it, and not build it, everything you should need is there.

I really enjoyed the HRO story. I owned one from about 1947 until about 1990 ,it was an ex military unit I think.. in the 50s & 60s these receivers wouldn`t bring over, maybe, $50...I converted mine from 2 volt tubes to 7 pin min tubes like 6BA6 etc. it always worked great. you look at this rig and say ,someone destroyed a classic ..I say, someone took an old obsolete receiver that had little value at the time and had a great time creating a masterpiece.have fun Harold W4PQW.

```
---------------------------------------------------------------------
FORSALE - MINT Icom 735 HF rig
---------------------------------------------------------------------

I have an absolutely mint condition Icom 735 HF rig that
I'd like to sell. The rig includes the optional 500-Hz
CW filter, the optional EX-243 electronic keyery,
and the original hand mike with up/down controls. I bought
the rig as a "backup" and have never used it (other then to test it
out for about 1 hour). It's like new. I also have the original box and
manual. It's also ALWAYs been in a smoke free environment.

ICOM 735/cw filter/elec keyer/mic
$525.25.25.25.25.25.25.25.25.25.25.25.25.25.25.25.25.25.25.25.25.25.25.25.25.25.

Guaranteed that you'll like it.

Hi,

6U5 valves NOS are in stock again. The label on them is 'Haltron', but
they never made valves themselves (as far as I know) so they are
obvious rebranded. They look just like an RCA 6U5.
The price is NOK 186.70 each or about US$ 20.30 I can send a picture.
E-mail me if interested

Regards,

Arnold Goksyr

DEMOSTENES - N6899 Balestrand, Norway

One of my big heartburns is the guys who brag how they got a 75A4 for $50, often from the widow or kids of a deceased ham. Up until now it's just been my personal affront at a dishonest practice, but today I ran across the following:

Texas Deceptive Trade Practices Act (Texas Business and Commerce Code Section 17.45) which prohibits:

ï¿½an act or practice, which, to a personï¿½s detriment:

(A) takes advantage of the lack of knowledge, ability, experience, or capacity of a person to a grossly unfair degree, or

(B) results in a gross disparity between the value received and the consideration paid...ï¿½

It appears to me that, in Texas at least, such a "deal" could be unlawful. I would anticipate that other states may have similar statutes. I hope some of the bottom feeding coyotes out there are nabbed by this in the near future.

Well Dave, I appreciate your feelings but I have to think such laws will
open a can of worms for everyone.
Consider a purchase at a flea market, swapfest, garage sale or wherever
people gather to buy and sell.

I certainly don't want to see a price on something that is real cheap and be
required to say "Oh no. This is worth 10 times that much. I insist on
paying more". Further, at such a gathering it is "Buyer beware". You
generally have no guarantee that your purchase is worth what you paid. You
are not forced to buy/sell.

While the intent of such a law may be worthy, I can't help thinking that
this is just another law that will be ignored or abused.

Thanks,
Alex

I agree with you sentiments, but you know that there will be no legal remedy for such situations.. I guess the only thing that we can do to protect survivors is for clubs to provide a disposal service for equipment left behind.. Estate sales usally prove to be 'bargain sales" as it is, but local clubs can guarantee the the inheritors receive at least a reasonable amount of money for the equipment. Many clubs do this and take a nominal commission that is paid into the club treasury.. Perhaps the ARRL should publicize this more.

FS: 3 Collins receivers as one lot. All 3 receivers have 9.5+ front panels with original knobs and are very clean. They all work and there are manuals for each one. I am taking them to the Ham-Com ARRL Convention in Dallas next weekend to sell for $1200/all and are the following models: 75S-1, 75A-2, & 75A-3. This is a good chance to take the one you want and sell off the rest. If I don't sell them between now and next Thursday you can see them on the table there.

This thread reminds me of when I was 16 and had an amplifier for sale.
I put an ad in the newspaper listed the ham amp for $200. A ham called
and came out to see the amp and fell in love with it. He bought it for
the asking price. The only thing, he said , was that he needed a receipt
for the amp. He said please make out a receipt for $50. This wasy I can
tell my wife that it was a good deal and she won't get on his case for
buying more useless radio junk. I thought he was kidding but he was dead
serious. Is it possible that the widows think the stuff is worth less
than the average ham thinks it is ??? That would never happen.....
right guys ?????
You guys better fess up and tell your old lady how much you really paid
for all that junk. If she doesn't kill you; at least she can get a fair
deal for it when you become a silent key. Even better keep an inventory
of your stuff with approximate value along with your life insurance
policy.

Does anyone have any of the "lamp shade" material as used in the Drake gear? I think the blue variety is available, but I would like some other colors. Any leads would be appreciated.

(This is for an antique RCA console radio)

Thanks for reading,

Barry - N4BUQ

A mis-application. This act is to protect BUYERS from Sellers. The
section in question is at the followint website, so read for yourself:

http://www.capitol.state.tx.us/statutes/bc/bc001700.html#bc018.17.46

Briefly, as long as the SELLER does not mis-represent the merchandise
for sale,
the law has been followed.

The SELLER is allowed to sell at any price he chooses, as long as he
fairly
represents what is for sale. He can give it away as a gift if he
chooses.

However, nothing in the law requires the SELLER to sell an item at
fair market value. Or prohibits a BUYER from buying something at
below-market price.......

Or better yet, leave instructions in your will that all your radio
equipment is to be disposed of by E-Bay auction only. That will guarantee
that your heirs will get back more money than you paid for the gear in the
first place... :>)

5305. RF probe needed...

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-06 02:12:33 UTC
From: John <jh.lewis@worldnet.att.net>
Message-ID: <lkgT6.63918$t12.5069782@bgtnsc05-news.ops.worldnet.att.net>
Source record: 52614
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

I've lost the RF probe for my signal generator - it's about a 1/2" diameter screw on thread mount, with an alligator clip and probe on the other end...pretty much standard stuff for doing radio alignments.

Does anyone have one to sell or know where I can get another one? The signal generator is a Paco, not sure of model number...been with me for years and still works like a charm - if it has the probe...

Thanks for any help.

John

For those with an interest in collecting, restoring, and especially
operating
military communications equipment, please consider joining the armyradios
mailing list..

The armyradios mailing list is now at 400 members with many not only
in the United States, but also Europe, Asia, and Australia..

Group discussion is a great way to share leads on where to find stuff,
how to fix it, and how to find others on the ham bands that like to
connect with one another and use their gear ..

For further information, see the armyradios area at the
http://www.tactical-link.com website, especially the

http://www.tactical-link.com/armyradios_discussions.htm

area...

Source record: 52625

My impression, based on the design of the R390,
is that most things that would go out of alignment would
effect selectivity, or sensitivity, and not especially the
frequency accuracy of this beast since the L.O.'s
are xtal controlled with variable-frequency
IF's via the slug-racks and the heart-shaped cams..

Of course if the PTO assembly is messed up then it's
a different story, especially if the mechanical range of the
dial-zero is out of whack..

Equally good: A list of the equipment and what you paid for it (and condition - new or used). At least, that will give them a basis of what to expect. This is also helpful should you want to sell it yourself, before you die.

Not quite the same thing. If someone puts an item in a garage sale at a
price far below its worth, then there is no deception involved. The person
was just foolish to not try to get some idea of the item's worth.

If someone offers a spouse etc a price far below what an item is worth, when
that person knows quite well that it is worth much more - then there is gross
deception. This is the case that would be covered by the Texas law.

: While the intent of such a law may be worthy, I can't help thinking that
: this is just another law that will be ignored or abused.

Probably ignored, as most people won't even know it exists. I don't see
how it could really be abused.

Just curious, how did you lose it?

Anywayz, if you have a tobacco shop nearby, talk thenm out of one of
those those aluminum cigar tubes. Add a 1n34, a cap and resistor, and
you have an RFprobe.

While I too dislike people who take advantage of others I do have an
observation. It is the responsibilty of the person selling the item to know
what it is worth before they attempt to sell it.

Once again people look to the government to protect people from themselves.
Just another useless, unenforecable law on the books!

Just my humble opinion.

Regards.

5328. Re: R390A alignment

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-06 12:10:55 UTC
From: Bob Camp <bob@cq.nu>
Message-ID: <j5pT6.61989$Bn1.10072961@news02.optonline.net>
Source record: 52637

Hi,

I agree on frequency accuracy. There unfortunately is pretty much nothing
you can do to net the radio back to full accuracy by alignment. Once the crystals drift
there is no adjustment to bring them back in. The PTO has limited
adjustment, but most require surgery to bring them back in to range today.

Since the selectivity is mostly determined by the mechanical filters in the
390A alignment doesn't have much affect on selectivity. You might see some
image problems with an out of wack high IF but I doubt it. Even with a
broken core in one of the IF transformers I have a radio that works just
fine.

Sensitivity is the main issue. If you use the Chuck Rippel 10 db sensitivity
test (using the VU meter for a 10 db rise above noise). The radio should run
below 0.5 microvolts. Most seem to run half to 1/4 of that. His test is not
a standard AM sensitivity test, but it's fast to run and since he has a
large database of radios he has checked you pretty much know what to expect
when you run it.

Take Care

Bob Camp

Exactly what we need . A law to keep us from paying too much!

Seriously, there is no way to pass a law to protect the ignorant.

Besides that, 75A4's probably should be worth closer to $50.00
than the $1500 I've seen them sell for. Of course, this law should exempt my
75A4.

For what it's worth...

Dan

I've got one unmodified (from what I can tell) in my shack. A few questions...

How do I connect power to it?
What was the LF range coverage? Mine has that module.

Any web pages on the transmitter?

5335. Help: Trio JR60 / Lafayette HE80

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-06 19:36:59 UTC
From: g8hxe <g8hxe@iclway.co.uk>
Message-ID: <3b1e86e6_3@news1.vip.uk.com>
Source record: 52545

I obtained a TRIO JR60 receiver (very similar to the HE80) in a non-working state some time ago and now have it showing signs of life on all bands except the 144 MHz VHF
section which remains stubbornly dead - although the set generally does not seem as sensitive as one that I had several years ago.

As all the oscillator trimmers have needed substantial "adjustment" to get the thing working on any of the bands and I suspect that something similar will need doing for the 2 metre tunable IF - the trouble is I have no alignment information and can't even make a guess as to what the IF should be as all the markings on the VHF oscillator crystal are unreadable.

Please can anyone help with alignment details and the trimmer layout (for either the JR60 or the Lafayette HE80 as they are both so similar apart from the VHF section) so that I can align the receiver front end and possibly get the sensitivity back to what it should be like, and possibly even a circuit
diagram or user manual ?

Also, does anyone know a source of paint which will match the original blue colour of the case - mine has been badly repainted in black at some time!

73,

Keith, G8HXE.

That's a demodulator probe for a signal tracer.

You're missing connector is a standard Amphenol
mike connector, and was used on many Heathkit
rigs in the sixties. I'd suggest replacing the
connector with a BNC female chassis mount, and
use convential RG58 (stranded center) with the
appropriate alligator clips for your work.

Pete

5338. Re: ART-13 info?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-06 20:54:01 UTC
From: Doug <doug@ycsi.net>
Message-ID: <9fm599jmf0@63.90.193.213>
Source record: 52548

Main power connector is to the left, with big center pin. The ART-13 will run with 24 volts at (around) 10 amps for filaments and autotune motor, 400 volts for low b+ and 1200 or so for high b+. I've had a couple and now have one just like yours, unmodified. Think the LF mod went down to about 268 khz or so and up to above the bdcast band, but dont remember for sure. I took my first "13" and modified it for grid block keying to allow faster operation
and quiet that pounding antenna relay. Worked pretty well.

Connectors are available, and some are being made new. But expensive.

Good luck

> ($200 - $300 dollar range) for HF radio gear?

Not that is stable or has a decently calibrated output.
The cheapest new (and decent) generator I know of
is made by Ramsey. I believe it's somewhere around
$1000. A quick search will bring up their site so you
can verify.

> Looked at all the stuff on Ebay, and I'd prefer not to buy used...

Take your time and you'll find something nice there.
Check other auction sites that have less traffic for
better deals. And don't be afraid to ask questions
of the seller. Avoid the ones that claim to know
nothing about the item and are selling it purely as-is.
Keep an eye on these forums too. Most guys that
aren't just trying to dump something fast for any
amount are going the auction route, but they usually
post on the swap forum as well.

> Thanks for any info.

You're welcome and good luck.
I've been shopping for a good used
signal generator on and off for
a couple of years. Expect to
pay a dollar a MHz for something
that is synthesized (stable enough
to be useful) with a calibrated output
that works properly and doesn't
require a forklift to move. ;-)

>One of my big heartburns is the guys who brag how they got a 75A4 for
>$50, often from the widow or kids of a deceased ham.

I know this is going to piss off a lot of people, but I think Ebay auction of a deceased ham's or SWL's radios is the onlyfair way to assure that they get market price (willing buyers).

Flea markets or garage sales are a big risk for widows. Somebody will offer scrap metal prices because THEY don't know any better either...not necessarily dishonest, but uninformed. The universe of buyers is just too small for specialized items to get fair prices.

I think Ebay has done more to prevent dumpster disposal of valuable hobby items than any other activity, though newsgroups and swap pages deserve credit as they all have opened up a worldwide marketplace. I think the hobby is richer for it.

I had a URM25-D or F or something and it was a pretty good performer after
20 minute warmup. I think Fair Radio might still sell these. I think it went
from 10kHz to maybe 50 Mhz.
For a few (quite a few) bucks more, there are many HP 8640 .5-512 mHz gens
(maybe $500-1000) and there is a military version that is quite
resonable...I've seen them at swaps for a few hundred bucks.

A good one to keep an eye out for is also the Boonton 102 or 103 series of generators. They use the 10K series of ECL chips in their dividers, so you can still get those parts. The only thing that you can't find anymore is that Optimax RF output amplifier, but the same goes for the output amplifier in the 8640. Around 350 dollars would be a good price for the Boonton unit, while 300 to 500 dollars would be the ball part for the 8640. A year and a half ago, Rockwell-Collins was selling the 8640s for 25 dollars apiece, out of the inventory disposal store in Cedar Rapids.

==========
So did the Army and RAF. The NAAFI's were clubs with a bar and billiard table for use during off-duty hours. But if there was no mobile NAAFI van complete with serving ladies on the dockside when a ship came into port there was a riot in town that night. I don't care if I DO go blind.

The ports served by NAAFI ladies, all middle-aged civilian mums just like your own mum back at home, were as distant as Aden, Mombassa, Cape Town, Bombay, Colombo, Trinco.

Alex and Suez were not really distant stations - you could send your laundry home from there.

Get your knees brown Charley !

I will deliver these receivers to Hamcom in Arlington, Texas on June 8th and 9th if someone wants them. I really don't want to ship them.
1. TMC GPR-90 Communications Receiver, nice condition, very early model without the crystal calibrator, in original cabinet with original manual.See on page 408 of Osterman's book on receivers. It is listed as "very scarce".Price is $700 delivered to Hamcom.
2. Racal RA-17C-12 Communications Receiver. This is the North American Version with American Tubes, S-Meter, More Audio Output, Coaxial Connectors,etc. It is in very nice shape with top cover, copy of manual,and Racal Brochure. Stability is super with the Wadly Loop. See on page 329 of Osterman. It is listed as "scarce". Price is $800 delivered to Hamcom.
Digital Pictures are available of both of these receivers upon request. They both work great on all bands.
Thanks, Charlie Hugg, K5MBX
Abilene, Texas

5363. Echophone EC-3 knobs needed

Im selling some of my Ten Tecs to help pay for my Omni 6+ as follows

Triton 4 in excellent shape with matching power supply, filters, owners manual
$275

Triton 4, filters, blanker, dc cable, very decent backup rig, rebuilt PTO,
manual copy
$200.00
Omni D, warc, blanker, rebuilt PTO, 500hz cw filter, dc cable, manual $275.00
Omni C, , blanker, 500hz and 1.8 filters, warc, dc cable, manual $325.00
Triton 540, vox power supply 252, filters, 160 converter, digital readout Ten
Tec, manuals, new finals and driver and rebuilt PTO at factory, manuals--
$350.00
Also have matching vfos for Omnis and Tritons available-either with the radio
or sell after radios are sold.
Thanks and 73s Lew KlNDV

5369. Why no FILTERS?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-07 14:23:41 UTC
From: ham_guy@webtv.net
Message-ID: <9780-3B1F8E6D-104@storefull-136.iap.bryant.webtv.net>
Source record: 52579

In looking at my latest AES catalog, I noticed several ads listing a transceiver at a "SPECIAL" price. Then in the fine print, a list of filters that can be purchased for (over 150 bux) that apply to the radio.
Then, at the bottom they say "IT IS RECOMMENDED THAT FILTERS ARE INSTALLED BY A DEALER." By the time the radio is "put together" its cost has risen to almost double the advertised price.
I know great computer "DEALS" usually say "Monitor Sold Separately" etc.... but the monitor doesn't have to be soldered into the PC. This appears to be a very deceptive practice that everyone has become accustomed to so nobody complains about it.
How about if I was to sell a car and then tell the buyer... "Oh by the way... I have all the electric window motors and door locks and shock absorbers for the car, if you'd care to buy them too."
Bought a radio lately with no filters in it? JJ

5370. Re: Why no FILTERS?

Well, using your car analogy. You can order a car with a V6 or a straight 4. With an automatic transmission or with a manual. With a sun roof or with none. With leather or without. And so forth.

I suppose not having a standard filter means the buyer can customize the transceiver as he/she sees fit.

Vote with your pocketbook if you don't like it and purchase something elsewhere where you have to accept what the manufacturer puts in each and every one.

>Does anyone still manufacture a relatively inexpensive signal generator
>($200 - $300 dollar range) for HF radio gear?

Leader still makes relatively low cost instruments. I have one of
their older solid state sig gens (analog dial frequency setting) that
I use for aligning old tube sets all the time. I don't know if it
would be useful for aligning a high resolution digitally tuned radio.
The analog dial has some built in uncertainty that doesn't matter with
ol, AM/SW radios but might make a big difference in a set that can be
tuned in 100 Hz steps. I bought it used for $50.

FWIW, I'd much rather use an old military generator (e.g. URM 25) and a freq counter than an inexpensive "commercial" generator. Much, much better piece of equipment at half the price.

I use a little RCA WR-50B who's place on the bench can be measured in
terms of cubic inches rather than cubic feet. Thats a very important
aspect for me!
It was less than $30, has sweep functions and is remarkably stable.

Hello
I know it's not really a Boatanchor but I've just got a Stoddart NM-25T Radio interference and Field intensity meter and am looking for information about it as I think it's pretty rare here in the UK.
The unit seems to function well after I put one of the "biscuits" back into the tuner turret, any information would be useful but I have a few specific questions:-
1. What should the CAL level be? - it's not marked on the meter
2. What type of antenna would be used with it?
3. It has X & Y scope ouputs - would these be used to plot a manual frequency sweep onto a storage scope or X-Y plotter or was there some means of automating it?
4. What IF(s) does it operate on? - it has an IF output at 455KHz but as it tunes 455 I assume it's dual conversion at least.
5. What filter bandwidth does it have?
6. What type is the Y output jack?, it's like a smaller diameter 1/4" if you see what I mean.

Thanks in advance for any help, any specifications or pointers would be good and a circuit would be really helpful.

Thanks

John

When I bought my TS 570D 2 years ago I added the 500 Hz CW filter as an option.

When I bought my IC746 in November last year I added the 350 Hz CW filter as an option.

When my wife bought her Chrysler LHS she added EVERYTHING they have available as options.

What's wrong with customizing a radio or other item (car) to meet specific needs/wants?

> Bought a radio lately with no filters in it? JJ

You're missing the point. Most radios come with a moderately-wide ssb filter, standard. If you don't do CW, there's no point in buying CW filter(s). If you don't do RTTY or other data modes, there's no point in buying data-optimized filters. If you don't listen to AM shortwave much, there's no use in getting a wide AM filter. Filters are expensive. The manufacturers put in only the minimim needed; typically, a moderately-wide ssb filter, because that's the mode most hams use. Whatever ELSE you NEED, you can buy, you can pay for.

I've installed filters in radios. Sometimes it's easy. Sometimes it's a pain in the ass, and I've had to buy specialized tools just to get the damned radio apart. You makes your choices.

If you want to bypass analog, mechanical filter installations altogether, you might look at the Ten Tec Jupiter transceiver. It uses "digital" filters, and comes with, I believe, 34 filter widths, standard, in the basic radio price.

Source record: 52496

I have a Model 90651-A Millen GDO (S/N 687) for sale.

This is the later model(gray) meter that uses a transistor meter amplifier. It comes complete with seven color-coded coils and a matching carrying case. Frequency range is 1.7 to 300 MHz. I have the schematic diagram and can supply scanned images of the manual on magnetic disk. The unit is in very good condition.

Despite the words on the top of the carrying case, "Hinge guaranteed to withstand over one million openings", there is some separation at the plastic hinge although it is still attached.

The Millen dipper is second only to the RF Measurements Corp Model 59 dipper in quality and performance. I have two of the '59s, making the Millen surplus to me.

I am asking $100 post paid in CONUS.

Wes Stewart

Source record: 52504

Hi Jim, here's some painting tips.

First of all, unless there's significant pitting, deep gouges, or rust, you probably don't want to sand down the cabinet nor strip it. You can fill/patch surface imperfections with Bondo (available at auto outlets). Be sure to sand it flush.

Now here's how to paint the speaker (also applicable to other Drake 4-line gear)...

1. Remove the speaker grill from the cabinet.
2. Remove the speaker from the grill (4 screws/nuts).
3. Cover the logo plate on the front of the grill with masking tape. Use a knife to carefully cut the tape around the edge of the plate..
4. Spray paint the front of the grill as described below, using Krylon 1608 Smoke Gray aerosol paint.
5. Remove any feet from the cabinet and spray paint it as described below with Krylon 1613 Semi-Flat Black.
6. Re-assemble.

If done carefully, the results will be very satisfying.

==========
Painting instructions:

SAFETY FIRST: Wear a good quality repirator, one that is made to remove organic solvents (not just a dust mask). Lacking that, paint outside or in a VERY well ventilated area. The solvents in the paints can do real neurological damage. Believe me, I KNOW!

Now, down to painting:

First clean off the surfaces with Naptha (the solvent, not the soap). It's a good wax remover/mild degreaser that evaporates fast, and leaves no residue. Then set up your painting area such that you have a single bare 75 to 100 watt light bulb (like a clip-on lamp without the reflector) located away from you at about head height, putting the cabinet between you and the light, and oriented so that it casts a bright glarey, or "spectral" reflection off the surface you will be painting. Then moving side to side like a machine, spray on your first coat, keeping your head located so that you can see the glare off the cabinet. Don't try to get perfect opaque black on the first coat, just go for even coverage. Wait about 1/2 hour, then put on your second coat, this time going for nice and black.

General aerosol painting techniques: keep your spray can 8 to 12" from the object. Work methodically, don't overshoot (put down too much

paint) on any spot, and keep moving at about 12 to 15 inches per second. Keep the nozzle pointing forward, and as level with the ground if possible, no more than 45 degrees from horizontal, and never vertical or it will drip and mess up your work. Start the spray before you reach the leading edge, and only release the button after you leave the trailing edge. Work in one direction only, choose right to left or left to right, and then stick with it.

If your paint looks even in that glare, it will do fine. If you start to get shiny stripes of thick paint, back away from the object and/or make your stripes closer together.

Let the second coat dry for about 15 minutes, and then you're ready for the texture coat.

Then (and this is the magic) back up around 3-5 feet and MIST the Krylon onto the cover, sorta like a fog of paint. Move the can around in a gentle circular motion, evenly misting on the entire surface. This will give you a really beautiful texture that, IMO, rivals the original paint. Resist the urge to put on too much texture, a little goes a long way.

No it's not the equal of the original paint, but it's mighty nice, not too glossy, and not hard to do. And it doesn't cost $75 and two weeks per cabinet.

Try it, you'll like it!

Hello all,
I am selling several hard to find Ham Clocks; reads off the time in any country, at any time of the day.
All are discontinued. Very desirable and will look great on your table with your radio gear.
Please email me for prices and pictures.
Thanks

While this sounds fine, the typical XYL of an SK is not going to be in
a position to place the items on e-bay and then pack and ship the
goods to the winners (?). This is typically where the clubs come in
and can do all this for her. Doing this is not cost free, so it IS
reasonable for the club to deduct the 'out of pocket' expenses
(packing, etc.) from the proceeds, and most widows would make a
generous donation to the club for their help.

5403. Heathkit SB-230 P.S. Transformer Testing.

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-08 15:35:24 UTC
From: Michael Fenton <mfent@voyager.net>
Message-ID: <3b20f1de$0$62142$bbae4d71@news.net-link.net>
Source record: 52513

Picked up an SB-230 at a rummage sale and I suspect the p.s. transformer is bad. When I first and second time I hit the switch it trips the breaker. The third time it will stay on. I have the transformer disconnected from everything but the supply. It draws 2 amps with nothing connected to it and it seems to draw over 10 amps when I first hit the switch. Am I correct to assume it is bad? 3 of 6 of the electrolytics are leaking badly also and I suspect may have put a strain on the transformer. Can it be rebuilt or rewound? Any insights would be appreciated.

Thanks Mike

If you have the schematic and some proper test equipment, you can
'reverse engineer' the transformer quite easily. As long as it is
"conventional", several places sell such units that would do. If it is
a special, then there are places that will recreate the transformer.
The cost is pretty heavy, though, so for such an instrument as that,
you would likely be better off to pick up another one---it would be
cheaper.

Check out http://www.pwdahl.com/index.html as one possible source.

Check the primary wiring
Someone without a manual may have wired the transformer primary windings
wrong.
You are going to have to rebuild that power supply, Harbach electronics has
kits for that.

>it seems to draw over 10 amps when I first hit the switch.
You mean an in-rush or constant ?

INCORRECT:

Section 17.45 of the Texas Statutes deals ONLY with definitions of
words and phrases, NOT with any legal requirements.

The section here, which was misquoted, is simply the definition
of "Unconscionable action or course of action" , and that's all.

To quote, or misquote, a section of a "dictionary" and to
claim that it is against the law according to statute
is, in my opinion, an "unconscionable action"..

You see, with the INTERNET, each of us can actually look up the
actual statutes for ourselves. No need to selectively quote
pieces of a sentence out of context.....

No such law.....Chapter 17 is used to protect the
BUYER from MISREPRESENTATIONS by the SELLER. No liability
is accrued to the BUYER for paying the SELLER'S asking price
on anything..... Morally, maybe a problem, but legally, no...

Andy

PS> Next time, why don't you just quote the whole passage
without deleting half of it, or , better yet, give the
website. Stop trying to troll for headlines....

My 102 power transformer has two windings, one 135 volts, and the other 6.3 volts (by mesurement).
By the tubes it has to feed I would say maybe 1 amp at six volts and 30 mA at 135...
I get a 33 volt drop across a 2,2K resistor, so actual current load is 15 mA or so.

The box is big and you could use almost anything. One of those isolating rasor outlet transformers
could give you 120 volts and you could use a separate 6.3 volt transformer. For your safety, DO
use an isolating transformer to get your 130V DC, just using a diode can kill you.

5417. Aerovox has filed for bankruptcy

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-08 23:03:25 UTC
From: "Charles A. Days" <oldradiodays@mediaone.net>
Message-ID: <3B215999.6294BEE2@mediaone.net>
Source record: 52527

Aerovox has filed for bankruptcy under chapter 11.

Aerovox announced on 6/7/01 that they have filed for chapter 11 protection from
creditors.

Recently, Aerovox had moved there manufacturing location from Belleville Ave. New
Bedford to the New Bedford Industrial Park. Despite a tax increment deal for the
new location, management has been unable to operate profitably. Other influences
are the reduced demand for their products in the power factor field and imported
products.

Many Radio Collectors are familiar with the Aerovox company as a dominate
manufacturer of capacitors and see their products in many receivers.

The incentive to move their manufacturing operation was prompted by the fact
that the previous facility is badly contaminated by insulating oil. The now
empty building, formerly a textile mill, is scheduled for demolition and
disposal down to bedrock.

Source record: 52529

I've got a problem with the final circuit on my Tempo 2020 HF rig that is caused by a failure of the Zeners in my grid bias circuit. I've got both the Operators and Service Manual, but I'm still stumped on how to find a replacement for the diodes.

They're identified as Zener DZ750522A and they appear to have a Henry (Uniden) Part number of DDAY038001. I'm not getting any hits when I search either part number and wonder if there is a modern equivalent (or near enough replacement.)

I realize this radio has enough silicon in it to disqualify it from true BA-hood, but I thought this group might have some clues about that vintage part.

73 and thanks for any advice you can offer,

Marcus Harton nz4e

That's the best bet. Every area has it's share of pond slime who prey
on SK widows. "Old Joe would have wanted me to handle it." This
happens with other hobbies/activities besides ham radio.

I think the Yellow Pages would be a bit too thin for this
purpose...unless you double-them-up.

Perhaps it makes sense to designate people you trust to handle the disposal of your collections.

But I still think it's important to make sure your other half knows which items are the most valuable, and has some general idea of what they're worth.

If you know your time is limited, it also makes sense to sell what you can at realistic prices.

I knew a guy who had a lot of high end astronomical equipment who was terminally ill. If a filter he had was currently selling new for $75, that's what he wanted for his mint, but used one. Friends still bought some stuff to help him out, but if he had realistic prices, people would have bought more.

I think part of the problem was he knew he was dying but he really wasn't ready to sell it.

A couple weeks after he died, the astronomical society contacted the family to see if they wanted help selling what was left and found they were in the process of having a tag sale. Most of the stuff was already gone. A realistic value for his collection would probably have been in the range of $40k.

5428. F/S Hallicrafters SX 88, HT 33a. HT 32a and SX 101 mk 3

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-09 12:20:08 UTC

Message-ID: <wLoU6.894$rS4.46164@eagle.america.net>
Source record: 52538

F/S Hallicrafters: HT 33a rf amp, complete and very nice looking unit. Minimum cleaning effort and very few cosmettic defects. HT32a exciter, same circumstance as rf amp. SX 101 mk 3a, same condition but not quite as nice looking even though its had a little bit of initial cleaning. All three units are in well above average condition. $250 for each or $ 650 for all 3. Hallicrafters SX 88 available for $ 2000. Receiver cabinet in poor shape, needs to be repainted. Gen coverage dial glass has been replaced with plastic and Hallicrafter "h" logo missing. Radio works fine. None of above has had any modifications or restoration effort by me, other than a little cleaning. Buy the lot for $2500. Questions to Phil, e mail p_carpenter@msn.com or telephone 413 323 4088. Thanks for reading the posting.

5429. F/S National NC 300 with Conv. box and 2/6m units

Source record: 52539

Howdy nameless Heath troubleshooter,
Based on the info Pierre from Quebec posted for you re his IG102 sig generator, I looked in an old Hammond catalogue I have here and came up with the common 262x6 series .....15mA @ 120volts sec model would be 262B6. These 262x6 series are all 120vac secondary (not CT) and are either x6 for 6.3 vac filaments or x12 for 12.6 vac filaments. Up to 75mA secondary HV current, they're an open bracket design and from 100 to 500mA they were their X mounting (above chassis with clam shell end caps). Where are you located.....I might have one kicking around here yet (used to be a popular one for small projects before dumbing down became fashionable)

From: Steve Lenaghan <sales@southwest-telephone.com>
Message-ID: <3B223E94.1E31B7A7@southwest-telephone.com>
Source record: 52401

FA IFR FM/AM 1000S, ends Monday
The IFR FM/AM 1000 S Communications Service Monitor integrates the functions of several test instruments into a single compact and portable unit.

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1603469202

Signal Generator 100 Hz - 999.9999 MHz
-133 dBm to -33 dBm
Communications Receiver 1 - 999.9999 MHz , AM / FM / SSB
Sensitivity typically 1 uV
displays frequency error, deviation
BFO +/- 1.5 kHz
Power Measurement 0 - 10 / 0 - 100 Watts direct reading to 225 MHz
Internal Oscilloscope
Spectrum Analyzer
Internal Battery

The hinged top compartment provides plenty of space for the power cable, antenna, test cables and alignment tools. Comes complete with AC and DC power cables.

Feel free to email me with any questions. Thank you for looking, and Happy Bidding!

All true.
The problem is, though, that most of the manufacturers assume that all of us
want SSB, but that only a subset want CW or data modes. They are also wedded to
the idea of the filter as a fixed component.
>
>If you want to bypass analog, mechanical filter installations altogether, you
>might look at the Ten Tec Jupiter transceiver. It uses "digital" filters, and
>comes with, I believe, 34 filter widths, standard, in the basic radio price.

The Kachina did this, too. Also the IC-775 and '756PRO. But the Icoms are not
inexpensive sets, and the DSP based rigs often sacrifice basic radio
performance in the process of DSP implementation.

The rig that breaks all the rules is the Elecraft K2.

http://www.elecraft.com

CW comes as standard - SSB is an add-on! The basic filter system is
customizable by the user to four widths from about 2000 to 150 Hz. (It uses a
special type of crystal ladder filter that has adjustable bandwidth).

Hello,

The following valves are for sale. They are unused unless otherwise specified, and mostly in original boxes. They are all in stock and can be shipped immediately to anywhere in the world.

2 pcs 3069M Large, round CRT in super heavy duty packing material each in a wooden barrel. One in

completely new, obviously never unpacked (only by me for inspection), the other one seems also to be new and unused but it has

been opened by someone. US$ 250.- each

8 pcs F16-10LD CRT by GEC (some boxes says 'Haltron' on the outside. I have not opened to verify). They

are obviously all unused. US$ 150.- each

1 pcs F16-10LD CRT as above, but made by Mullard. US$ 150.-

1 pcs F16-10LD CRT as above, but this one is used. It has a little spot on the screen. US$ 75.-

4 pcs 7BP7 CRT. The boxes says 'Haltron' I have not looked inside. Unused and unopened. US$ 100.- each

5 pcs 5FP7 CRT. The boxes says 'Haltron'. Some are opened and some are sealed. All the valves are

obviously unused US$ 75.- each

6 pcs P535/1E STC pulse modulator valve. Also coded CV 427. It is similar to 715C. All unused. US$ 50.- each

1 pcs P535/1E Same as above, but this one seems to be used. US$ 30.-

6 pcs C1148 EEV pulse modulator valve. Unused and in original boxes US$ 35.- each

12 pcs C1150/1 EEV pulse modulator valve. Unused and in original boxes US$ 38.- each

3 pcs C1166 EEV pulse modulator valve. Unused and in original boxes. US$ 40.- each

1 pcs QF 451 Ferranti. Looks like a radar TR switch and unused. US$ 20.-

1 pcs KS 9-40D Mullard klystron. Unused in sealed box US$ 20.-

4 pcs M509 EEV magnetron. Also coded CV 3982. Unused in
sealed box US$ 50.- each

2 pcs M599 EEV magnetron. Unused in sealed box US$ 50.- each

1 pcs JP 9-75 Mullard magnetron. Unused in sealed box US$ 50.-

7 pcs 24B1 STC trigatron valve. Unused in original box (Strange
looking valve) US$ 30.- each

11 pcs 725A Western Electric magnetron. Unused in sealed boxes.
US$ 30.- each

Can someone kindly confirm the power output and power requirements of the Icom IC2KL

I know it has a 12 volt DC input but do not know the current rating for the power supply or the power output

Thanks

Pete

5457. Radio Shack electronic gadgets/ the best/worst?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-10 10:47:00 UTC
From: radioman390@cs.com
Message-ID: <20010610064700.23794.00003638@ng-df1.news.cs.com>
Source record: 52417

Radio Shack has been a great source of amusing electronic gadgets over the years. Currently they offer a (non-electronic) golf "scope" for $20 which is nothing but a rangefinder; and lots of other stupid stuff too. I admit there are many great items too.

But in the past I've bought:

a distance measuring device (acoustic)
a DSP noise reducing device (really pretty sophiticated)
a biorhythm calculator (*looking for another one)
an astrological calculator
an active antenna for SW
talking alarm clocks
remote controls
personal alarms

the list goes on

but the most legendary (revered even amongst RS employees) is the Electronic Wind chime.
You hang it outside, and instead of mechanical sounds, any movement triggers a raucous distorted approximation of a wind-chime type of sound .It's not only ugly, but stupid as shit. What WERE they thinking?

But this brings up the question, is there a WORSE Radio Shack product that deserves mention? I suspect there is, but what?

I'm not talking about quality or performance, but a conceptually flawed item that prompts the response "that's the dumbest thing I've ever seen."

For now, let's limit it to RS.
With RS outsourcing everything from the orient, I'm sure there was a fertile Oriental mind at work, developing an electronic hula hoop for RS to market.
What was it?
Suggestions? Comments?

5458. Re: Icom IC2KL amp

Newsgroup: rec.radio.amateur.boatanchors

Source record: 52306

The IC-2KL operates on 42vdc, @ 25amps MAX.
There is a DC-DC converter inside that converts the 40vdc to 12vdc for control and switching.
The PS-2KL, can operate on 120 or 240vac(works cooler and with better regulation on 240)
The amp is rated at 500 watts output continuosly on SSB, and for 10 minutes on RTTY. The RF transistors are expencive ,$600 for two mathced sets, so be sure to use the ALC feedback settings of the amp.

I have a Grundig Satellite Transistor 6000, Receiver.
The audio output transistors are drawing excessive current, They have strange numbers and colors on them.
My Grandfather was hard of hearing had played it to loud and burned up the audio outputs.
They *may* be darlingtons
I would like to try to keep the existing HI FI audio circuit with the Bass Treble controls
Does anyone know any web source of schematics, info or cross references on these ?

Joe

It is possible that emitter biasing resistors may have shifted values,
and may be the root cause of the excessive current.

Grundig is still in business, so original parts may still be available
for that set. Why not post the numbers on the transistors--perhaps
they could be crossed to a NTE replacement part as well.

Best regards

Peter

Some of you may think that Ron is wrong in stating that http:// is needed
to make a link (i.e. URL) work.

As far as I can tell, the need for http:// in a link is dependent on the
browser being used to execute that URL.
My elderly Netscape 2 needed the http:// prefix but my IE4 is quite happy
without it.

I'd go along with Ron's suggestion that you prefix a URL with http://
because people using old browsers will be able to use the link.

Thanks peter
This situation gets even worse as I got deeper
!.........no numbers at all.
All the power transistors have color codes (like resistors)...Yes color
bands !
The audio module is packed like sardines and assembled into a puzzle of
folded PCBs
screws, bent together aluminum fingers.
(Built like a old Blaupunkt Mercedes radio)
Looks like the best thing is to build a small amp with a common inline IC
and passive tone control and enjoy the radio for the meantime
(I will save the module)
The Satellite 6000 is a real German made radio from 1966 (not a Sangeon
Korean or Chinese)
See it little sister the 6001

Joe

Try a post to the rec.antique.radio+phono newsgroup.. The
group is more focused on vintage tube technology; but given
the age of the radio someone might be able to help you with
the set--they are some knowledgable German radio collectors
over there.

Source record: 52426

First off - KEEP YOUR HANDS OUT OF THE AMP!!

If you don't know what you are doing - do NOTHING.

The voltages in there are 100% DEADLY!!

Get someone who knows what they are doing inside a linear to help you out
in person.

IF the filter caps are NG - THAT is your problem.

DON'T PUT YOUR PAWS ON THE FILTER CAPS UNLESS YOU KNOW WHAT
YOU ARE DOING!! They can be charged up enough to KILL YOU!!

Do you have a ham license? If not sell the unit to a licensed Ham - it's not for

11 meter operation.

Regards,

_-_-bear WB2GCR

In addition, many of the newer browsers actually engage a
search feature to complete the URL, and may find a valid
link with a prefix other than "http://" and send you there instead.

Incorporating incomplete link addresses is a little like using
slang to explain something you didn't look up.

While Ian is correct in his logic, I would suggest old browsers
should be updated ASAP, and not just for this reason. There are
many new HTML tags which old browsers do not recognize or handle
incorrectly. Updating is free and easy. Do it!

5472. Maryland Hamfest - Father's Day

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-10 20:08:37 UTC
From: windbrkr@Zerols.com
Message-ID: <MPG.158d9dcb23499a9b9898f0@news.erols.com>
Source record: 52431

The Frederick Amateur Radio Club (FARC) will host its annual Father's Day Hamfest on Sunday, June 17, 2001 from 8:00am to 3:00pm, rain or shine. (Tailgating access from 6:00am.)

It's at the Frederick County Fairgrounds on East Patrick Street in historic Frederick, Maryland. Easy access from I-70, I-270, US-15, US-40, etc. Plenty of parking.

Talk-in on the 147.060(+) MADRA repeater.

We'll have Radios, Electronics, Computers, Acres of Tailgating, Indoor Commercial Vendors, free VE Testing and more.

Good food and refreshments available.

On the web go to http://www.qsl.net/k3erm/ for more info and a map.

General admission is a $5.00.
Tailgating spaces are $5.00 each + general admission.
Indoor tables are $10.00 each before June 11th, $15.00 after.

Since 1978, one of the largest and most popular hamfests in the Baltimore/Washington metro area. Don't miss it!

Questions? E-mail k3erm@qsl.net or direct to me.

Thanks & 73,
Bob K9CMR

There are a lot of other addresses besides the http:// prefix. Your IE4/5
just assumes and then goes there. You should always include the full
link-- not all www. will work. Most links are http://, so you browser
is right most of the time.

Steve.

I go along with my own suggestion that if people have older browsers, that they find someone who knows
what they are doing to upgrade the browser and to heck with them since they are in ancient times and need
to catch up. Now IE even has the capability to autodetect ftp sites if you enter in just a plain ip address.
As far as netscape, i can't beleive anyone still uses it except linux and OS2 users.

My nephew (who's learning about boatanchor restoring) would like to know what is meant by "connect an 'output meter' across the speaker terminals and adjust for so and so output..." when manufactures discuss alignment procedures.

He would like to know what type of meter they're talking about, and if you simply connect a lead to each speaker terminal?

I told him I'd ask - thanks for any help!

John

Hi John,

The gizmo is simply an AC voltmeter. All you are doing is measuring the power going into the speaker.

You have several alternatives, all of them pretty cheap:

1) HP 400 series AC voltmeter - generally selling for < $20 with tubes in it or < $40 with sand in it.

2) HP 410 series voltmeter - (my favorite) again generally under $40 but may or may not have a working probe with it.

3) What ever Radio Shack has on sale this week. Get one with an analog meter, not a digital one.

4) A good old Simpson 260 or Tripplet. These are priced all over the map ....

There are a *large* number of alternatives. Just about anything that will measure audio frequency AC will work.

Enjoy!

Most commonly they are refering to a VTVM, set to read AC, and fairly low voltage(like 5 or less). Many adjustments result in slight increases in audio level- in fact, too small to detect by ear. But the change will be quite obvious on the meter.

Remember that the meter is being strictly as a relative measurement- tune for max indication unless told to tune for a dip or null.

Another alternative is a little volt/ohm meter I got from Surplus Sales of
Nebraska. It's a surplus job, 1986, $5.95 and comperable to a $25 meter Radio
Shack sells. Analog dial -- nice for the price.

5493. BC-645 / ABA-1 INFO WANTED

Date: 2001-06-10 22:55:01 UTC
From: Lamb <k7fm@teleport.com>
Message-ID: <zKSU6.865$OT3.538440@nntp3.onemain.com>
Source record: 52451

I have a pristine ABA-1. It looks exactly like the BC-645 and I thought I would get some further information and ask the local aircraft museum (home of the Spruce Goose) if they might want it for a display.

I know the BC-645 was an IFF unit (Identification Friend or Foe). The December 1956 CQ states that the BC-645 was built by GE under top security for identifying friendly aircraft. But, they were all stored in a warehouse and not used. They even had thermite bombs inside for self destruction. CQ mentions that either the enemy got hold of the info, or the top brass were afraid the enemy would get ahold of the info. So, they never used any of them. Does anyone know which story was true?

And, what is the difference between the ABA-1 and the BC-645? Mine was built by GE in February of 1941 - before the war. As a pilot, I would be somewhat concerned about having one of these things on the airplane, wondering if this feature would torch the aircraft.

So, what is the "rest of the story"?

Thanks, Colin K7FM

Additionally, you can find clear colors for directly painting lamps in the model train catalogs and "better" hobby shops.

I read, and found to be the case, with my ATC that about 750pf of external "C"
was required for 75 meters; about half that for 40. Attach it to the terminal
marked "C" on the antenna side of the transmitter. Don't connect it to the
antenna directly as this will leave it in-circuit during receive.

Well I still say that the most important thing about making a clickable is:

NEVER TYPE IN AN URL: bring up the page -- copy the URL and paste it in
your E-Mail, NG, etc
That way NO ERRORS and you won't have to worry wheter you need an http://
or a www or whatever

A 2 week check on various posts found 25% of the URL's were wrong because
some one typed it in!!

Also if all hams would use an alias for their E-Mail, e.g. ac6v@amsat.org
or ac6v@arrl.net -- then it is easy to remember easy to type in, and no
notifying 800 people when you change providers!

Example -- you are mobile QSOing with ac6v and he sez E-Mail me at
74150.2161@mattechmail.com - fat chance you'll copy that - even at home on
the first read-thru. But ac6v@amsat.org is a snap. And NO the amsat list
is not available so no spam worrys.

A Zener diode is a Zener diode. I have a good surplus place locally. All you need to know would be the ZD breakdown voltage and the device's maximum power dissipation, and you'll be all set. Should be able to derive this from the schematic.

Drop me a note if you'd like to discuss.

I beleave this diode scales the bias adjustment pot.
Try any 60 volt one watt diode, it you are still over biased throughout the range of the bias adjustment drop to 45 volt.
You should have adjustable -39-60 on G1
Those Tempo's cook to death

5504. Re: Alignment "output meter" ?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-11 02:08:36 UTC
From: Patricia Gibbons <wa6ube@tactical-link.com>
Message-ID: <9g19f9$438$1@slb0.atl.mindspring.net>
Source record: 52461

"Output meter" as defined at that time was the
precursor to the "VU" or volume unit meter, which
generally has a logarithmic scale.. It's an audio version
of an "S-meter" if you want to make a comparison.

The older "output meter" was calibrated so the zero-dB
was equal to a 5 milliwatt signal across a 500 OHM load

Today, any common VU meter would work fine if hooked across
the speaker-leads and the volume adjusted to get a reasonable
reading when peaking adjustments with a modulated signal
injected at the antenna terminal from an RF signal generator.

To be a purist, an audio xfmr may be used to match the audio
output impedance of the receiver to a 600 OHM termination that
would have the VU meter across it..

Like others have stated in this thread however, many basic "VOM"
type meters will have a "DB" scale ..

Message-ID: <47343202.0106101841.1b65bc0f@posting.google.com>
Source record: 52464

These look great, but don't work so great.

Dug them out of my closet, but I have never
operated them myself. The R4C lights up, static across all bands, no hum, but also no signals heard. Has one 500 Hz CW filter, no NB, standard xtal set, cosmetically a solid 9. The T4XC lights up but no dial lights and does not appear to have any output. I'd give it a 9 for cosmetics except that it has one light, 2" scratch along the left side where the faceplate meets the case, and a couple 1" long scratchs on the aluminum PTO dial.

Comes with MS-4 and AC-4, shipped in 4 boxes. Includes all the cabling between both rcvr/xmtr.

At the least these are excellent parts rigs, at the most they only need minor repair to get back on the air. All offers considered, but I won't guarantee I'll take any of them. I will NOT break the set. I'll assume that shipping is NOT included in your offer.

tnx es 73,

Casey, KS7J

Hi!

I'm refurbishing an old Henry 2k-3 amp - I have the upper deck
schematic,
but no power supply schematic. I could trace it, and work on it as is -
but there
are a few parts that have been *replaced* that may or may not be
appropriate
in type or value.

So, anyone who can supply:

a) emailed - scanned copy
b) emailed - PDF (best!!)
c) snail mailed photocopy
or
d) URL to one on the 'net

PLEASE EMAIL TO ME!!
I may not catch your post - since the braindead admins on this system
keep only
3 days maximum worth of posts up. :- (

BTW- If you happen to have any flush mount panel meters (no cut-out
needed, just for the
two meter terminals) of *any value*, let me know too - the original ones

are toasted here.
I'll have to work out a replacement/retrofit if I can't find any flush
mount types)

Thanks,

Okay - BUT the Elecraft is a QRP rig, and non-standard in and of itself.

The idea that filters are OPTIONS is NOT new. Go back 20 to 30 years. If you ever expected to have filters as standard - you need/needed to go back to boatanchors when almost ALL receivers came with either a full set of crystal lattice filters or mechanical ones.

Now EVERYONE wants an APPLIANCE that THEY cannot fix, comes in one box, has every bell and whistles, and doesn't want to pay squat for it.

Now I wonder why there are no longer Collins Ham rigs, Heathkits, Hallicrafters, & etc.

>Okay - BUT the Elecraft is a QRP rig, and non-standard in and of itself.

They are coming out with a 100 W amplifier option. Some hams have already built their own outboard amplifiers to run more than the stock 10-15 watts. See the website and links.
>

Agreed. In fact, many first and second generation HF transceivers had only the SSB filter - no other options.

>Now EVERYONE wants an APPLIANCE that THEY cannot fix, comes in one box, has
>every bell and whistles, and doesn't want to pay squat for it.

Nope. Not me, for one. Last "appliance" manufactured rig I had was a Ten Tec, which I sold in 1984. Been homebrew, kit and "restored from basketcase BA"ever since.
>
>Now I wonder why there are no longer Collins Ham rigs, Heathkits,
>Hallicrafters, & etc.

Each company that is gone has a different story.

Some did not make the transition to SSB very well.

Some did not make the transition to solid state.

Some were bought out by larger outfits who had no desire to be in the ham radio business.

Some were wiped out by Japanese competition.

Some simply lost touch with the amateur market and put out products that were not in line with what hams wanted at the time.

Note that Ten Tec started up in 1968, right when the other American mfrs were starting to disappear. Ten Tec flourished in the same environment that wiped out the others.

My instructions to my wife are "call the local college club, ask it to
pickup EVERYTHING electronic that she doesn't personally want to keep
(her HT, etc.), ask the club for a written estimate of its value, then
deduct that much from taxes."

Bingo! Widow "what to do with all this junque" problem solved.
Similarly, college club gets either operating equipment or sells
equipment and buys what it wants.

I have one that I haven't gotten around to testing out, let alone putting on the air. With my various BA SSB xcvrs and Viking II AM station, I doubt I'll be getting to it. I got it cuz I just like Hammarlunds -- rcvrs, that is. Anyone want to make me an offer, and pay for shipping from mid-coast Maine?

It's pretty clean. Top of the front bezel is missing some paint and has some crud where something was stickered on it, but front panel is very nice. All original knobs in fine shape. The bandswitch rotates to the 160m position, but I'd have to look inside to see whether that band is equipped.

I didn't see a manual for it when I was rooting thru my paper collection today, but I'd be glad to look again if someone is interested in the rig. 73, Mike K. AA1UK

Jim - Good for you! I have ONE newer solid state rig. Makes a good
frequency counter/standard. The remainder are "hollow state", and only ONE
of them even has SSB mode.

Too many hams "talk" a good line about knowledge and technology, but haven't
a clue how to deal with drifting VFOs, negative feedback, and how to REPAIR
a RADIO.

A few years ago our local QCWA members got together and
organized a group to help with problems like this. We called
it SKAP (Silent Key Assistance Program). I think it was written
up in the QCWA journal.

The way it works is as follows:
- The widow contacts SKAP and requests help.
- A group of 3 hams inventory the equipment and make a list with
approximate values (Low and High prices).
[These hams must all agree, in writing, not to purchase any of
the equipment or act as agents for anyone else who wishes to
purchase the equipment]
- The widow is given the list along with a list of local radio clubs.

It has worked very well for us. I did run across one group in
southern Oregon claiming to be SKAP who's members didn't
sign the agreement and were making purchases on their own
behalf from the widow, before the equipment list was made
available to the general public. (I found out that one of the crooks
bought an $800 [new price] antenna for $40). I believe I managed
to get them to drop the SKAP name.
If you want to form a group be sure to require the signed
agreement from the members. If you're planing to deal with such
a group, make sure the hams involved sign the agreement. If they
don't, they're probably just a lot of crooked opportunists looking
for an easy victim.

Source record: 52336

Could some familiar with Southern England swap meets (rally) help me out. I may be in England in July for one of these weekends, 14,15 or 21,22 . Is there a really good rally I should try to attend....? I would enjoy seeing all the used or vintage radio gear and may drop a few pounds on a radio item to take back home.

Is there any good boatanchor places to visit in or around London...?

thanks, John KF2JQ

It sounds like a good idea, but what do you do if someone who is volunteering to help out stumbles onto something they've been looking for, or just falls in love with an unusual item?

I think it would make sense to develop a way these people could buy the item at a fair market price. Perhaps they don't participate in evaluating those items, or perhaps they are permitted to ask for the right to top other offers.

5563. FS/Johnson Roller Coil/Capacitor

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-12 22:48:08 UTC
From: nospam_n7ws@arrl.net
Message-ID: <3b269c1e.86999066@news.triconet.org>
Source record: 52343
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

I have for sale the plate tuning capacitor and roller inductor that I believe were used in the Johnson Thunderbolt and/or Desk KW. The capacitor and inductor are gang-tuned via a set of gears. The inductor is Johnson P/N 229-204 and the capacitor is P/N 154-38-2.

The mounting brackets, gears and dial cord pulleys are included, as is the Johnson front panel escutheon, although the latter is pretty scratched up.

I *do not* have the dial pointer and track.

With the exception of the escutheon, the components are in as-new condition. If you are restoring one of these rigs or if you are interested in homebrewing a moderate/high power amp or antenna tuner that will cover all bands without a bandswitch, then this may be for you.

Asking $125 or reasonable offer post paid in CONUS.

Wes Stewart n7ws@arrl.net

If you feel that you may have a conflict of interest, do not participate in that particular inventory. Ideally there should be a pool of hams available for this task.

If equipment ownership is more important to you than service to the community then you probably should not participate in the program.

BTW : The most difficult part of this whole thing is handing the widow the equipment list and club information and walking out the door. You really would like to help more, but to do so would compromise the program.

My firs suggestion would be to post to some of the news groups and list servers like you have here. I have an SB-201 and an SB-221 that I've added the 10 plus some warc to... it really wasn't that easy unless you have the heatkit supplied paperwork. I did it on my own some time back using my 200 and 220 as guides, my goodness it was a pain in the pazoo.

The guy looking for the 80 meter coil..? I'd just make one using informaton supplied in the Handbook. Since your working around the input section anyway, might be a good idea to bump up the Q value to make the amp match the exciter better than normal.

cheers

5591. 6 Mtrs hot on National NC-173

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-14 04:45:31 UTC
From: knudsenmj@aol.comOscar
Message-ID: <20010614004531.04332.00000171@nso-bj.aol.com>
Source record: 52298

Last nite (June 13) I could tell something was up when my favorite area FM station got blown away by another station from who knows where? So I fired up the R8 on its VHF converter and sure enough, 6 meters was full of CW beacons from the Souther US, Mexico, and Latin America! And SSB QSOs all over the place -- some sort of contest going on, but the OMs were taking the time to chat and exchange much more than necessary -- just glad to work such DX.

So I figured, here's a chance to see if the 6m band on the old NC-173 (ca. 1948, all octal tubes) was just there to enhance sales, or would it work? Sure enough, on the same antenna, I could copy some of the SSB QSOs. Not as well as the Drake by a long shot, and the dial read 49+ MHz versus 50.2+ on the Drake, but not bad for octal tubes and a band needing alignment. That NC-173 is pretty hot on all bands since I replaced the 6J5 oscillator, which was cutting out onthe lower half of every band.

Next time I'll see if the NC-270 works on 6m. 73, Mike K AA1UK

For Bell 2425 1961 stereo receiver.

Have one & it may be the only one ever built that did BOTH FM-AM simulcast
and FM-MPX stereo.

Certainly last Bell listed in Sams - was after TRW take-over.

Moderately clean, but 2 bad outputs.

Output xfrms were "hi fi" things that had this 'stack:' 1st tube plate wdg,
half spkr wdg., 2nd tube plate wdg., rest of spkr. wdg.

Reason is to reduce phase shift so neg. feedback can be done around output
xfrmr.

But that too restricive - any "universal p-p 8-10W" output OK. Will
just do w/o neg. feedback.

Thanks,

Marty

Hi Marty:

I have a bunch of transformers. I believe I have a oair of p-p 6V6 output transformers. Hopefully, you have a response. I did not want to leave you high and dry - but it might take a bit of work to unsort them. I do know which floor they are on, though.

So, if you do not get a satisfactory response, let me know and I will start the search.

Walt, you lucky dog!
Two units yet. Good deal.
A really interesting radio in that it only uses three different tubes; designed for long-time-at-sea use by fishing vessels.

Mine is dead on most bands, but hot as a pisol around 12 Mhz. Interesting design.

Late yesterday afternoon I was getting some low-band TV skip also. I
wasn't really sitting down watching and was not able to ID anything.
But, it was indeed opening! First one I've seen this season.

5604. Echophone EC-1 alignment instructions needed -

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-14 19:06:09 UTC
From: John <jh.lewis@worldnet.att.net>
Message-ID: <BW7W6.320$LA1.104370@bgtnsc04-news.ops.worldnet.att.net>
Source record: 52313
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

Turns out the alignment sheet I got off the net last night for my Echophone EC-1 is not the right one... It's marked "EC-1" and was in the Echophone directory, but for instance, the 30mc alignment procedure says to place the band selector on band 4, which is kind of difficult as both of the Echophones I have (the EC-1 and the EC-1A) are 3 band units.

If you have the proper alignment procedures, and could forward them, it would be most appreciated - I'd be willing to pay for any costs involved.

Thanks for any help,

John

This coming Sunday....

*** !!!! In our Traditional GARAGE and lot !!!! ****
so come rain or shine or super heat the Flea is on !!!

********* $1 buyers discount with hardcopy of this notice ********

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
Sunday June 17th 2001
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >2000 cars!

Buyers admission is $5 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $20 for the first and
$15 for each additional at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

SEASON PASS + Advance Discounts

A sellers discount season pass is available which
offers a 33% discount. See the advanced registration
form below for full seller info.

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Separate lines will form prior to gate opening
for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all

sellers (6'8" clearance).

Talk-in: 145.23- (PL 88.5) W1BOS/R and
W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)
MIT Radio Society (W1MX)
Harvard Wireless Club (W1AF)

For more info / advanced reservations 617 253 3776

********** $1 buyers discount with hard copy of this notice ************

<<<<<<<<<<<<<<<<<<<<<< cut here >>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>

Mail the coupon below by the 5th of the month to be a Prepaid Vendor.

FLEA at MIT 2001 Rates

SELLERS

This year each vendor must have a Cambridge Vendor License.
We will do all the paperwork to get the one day Cambridge licenses.
To keep the spaces affordable we are discounting your first space.

5615. 5R4GY and 5R4WGY-Difference

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-15 13:57:45 UTC
From: ydussault@sympatico.ca
Message-ID: <3b2a13ec.5417470@news1.on.sympatico.ca>
Source record: 52374

I just bought a Viking II. It has 2 5R4WGY tubes in it.
What is the difference with 5R4GY?
Thanks for any info.
VE2ATD-Yves

5616. Re: 5R4GY and 5R4WGY-Difference

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-15 14:25:28 UTC
From: Bob Camp <bob@cq.nu>
Message-ID: <sVoW6.28086$tR.3162312@news02.optonline.net>
Source record: 52376

Hi Yves,

The 5R4WGY is the rugged version of the 5R4GY. For amateur use they
are identical tubes.

For all the details on both tubes check out:

http://www.duncanamps.co.uk/cgi-bin/tdsl3.exe/show?DES=5R4GY&SID=0002A
C8B465556DD

I suspect that the W version will do better in a high shock, high
vibration environment but that's about it.

Enjoy!

Bob Camp

Electrically, there's no difference. The "W" designation indicates a tube supposedly more rugged mechanically.

Source record: 52378

I used to build their p-box kits when I was a kid and liked the regenerative SW receiver (there- boatanchors). Problem was, the boxes were polystyrene so would melt as soon as you tried to solder the connections. What a dopey concept!

Ask and see if you can find somebody with Rider's Volume 14 to scan you
a better copy. I don't have it here. Try rec.antiques.radio+phono.

A Ham Band only receiver from the Late '50's. Updated version of the NC-300 with more features for SSB. Qmultipler replaced crystal filter, better AGC, second convertor xtal controlled. I have the NC-300 makes a great AM receiver with 8kc IF at 80kcs. Hefty and well built with an easy to read slide rule dial. Wouldn't part with mine but I got it for $50.

Hi

I have many 40 meter novice band and phone band crystals in FT243 holders that I would like to swap for 40 meter or 80 meter low end crystals in the (extra) cw portion.

Please let me know if you are interested in a swap. I can test the crystals in Johnson, Heath, B&W rig(s) before trading.

Thanks.

Hi Joel

You could try

http://home.cfl.rr.com/happysurfer/relays.htm

They have a list of Amperite time delay relays but the one you want is not listed.

However they say they have others for you to enquire about

I've had a couple of these and I've never gotten around to putting one on the air. I've come to realize that they are too heavy for me to deal with anymore.

The one I have is complete. It has the osc/xtal plugins in place. It even comes with an original manual albeit in so-so but usuable condition! You'll have to round up some tank-coils.

I don't think it'd be too hard to get it going, but if you wanted it to look really good, it'd more more of a restoration project.

This is a pick-up item only! I'm in Tulsa, Oklahoma. I'll wait a REASONABLE amount of time for you to pick it up.

The price is a FIRM $300.

Reply via Email. I'll repost immediately when it sells.

Thanks for the read.

But Marty said "receiver", not "tuner". It was not uncommon for tuners to
do this, receivers that would do it were unusual.

5644. Midland ARC Swap Saturday June 16th

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-16 04:23:10 UTC
From: Roger Halstead <rdhalste@tm.net>
Message-ID: <OaBW6.619$Tt6.192964@monger.newsread.com>
Source record: 52253
Cross-posted to: rec.radio.amateur.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.swap

Tis a bit late for posting, but the Midland Amateur Radio Club is holding their annual swap at the Midland county fairgrounds (Midland Michigan) Saturday the 16th of June from 8 till noon, or so. The farigrounds are just West of the US-10 and Eastman road interchange.

Westbound take the eastman exit, go straight across Eastman and you'll be on Airport Road. The fairground entrance is about a 1/3 of a mile west on the north side.
Eastbound, take the Eastman Road exit, turn right on Wackerley St, 1/2 mile to Sturgeon. Turn right, go over US-10, turn right on Airport Road and the fiarground entrance is about 2/3rds mile on the left. (airport Road and Wackerley run right along side the expressway)

We've sold over a hundred tables and it looks like it's going to be very well represented with sellers.

Trunk sales available...Everything from boat anchors to computers.

Come on up to enjoy the hospitality.

Talk in on 147.00.

5646. New project...Hallicrafters SX-17

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-16 05:52:39 UTC
From: Jerry <mudshark@qnet.com>
Message-ID: <3B2AF427.3D19A03E@qnet.com>
Source record: 52255

Just picked up a Hallicrafters SX-17 the other day. It has most of its original knobs (looks like two of them are stray RME knobs), a hideous repaint of the cabinet (gonna have to strip and re-do it right), no pointer for the dial (hmm...what can I fabricate for this?), and no sound.

Gonna have to keep my eyes open for correct knobs. I am not sure how I am going to tackle the pointer yet. The paint job should be pretty easy. No sound, hmmm...

The output stage (push-pull 6V6s) has appropriate voltages, and when I touch the grid of the output tubes, I get a quiet hum. No hum when I touch the grid of the first audio tube. Also, no B+ on first audio tube. Haven't checked for shorted caps yet...that is tomorrows task. Sure hope the audio input transformer is ok...

Jerry

I worked for RadioShack for about 24 years, then I got better. Here is my list of the silliest items:

The TRS-80 MC-10 computer -- a tiny version of the old Coco, too small of a keyboard to do anything with, and almost no software support. Probably collectable by now (or not).

The wind chime (already covered)

The inflatable RC Robot

Almost any other of the Christmas toys...some of them just made you shake your head and wonder...

Those CB radios with the telephone receiver for a mike (the only CB radios we didn't sell out of during the CB craze)...and speaking of CBs, how about that little converter for your car radio to tune in the CB channels?

What do I miss? Shelves full of brand-new sweep tubes at relatively cheap prices!

>it'd more more of a restoration project.

Or great for parts to build a new rig. I owned one in 1954 (KL7BCQ at the time) and believe it is one of the most under-rated (derated) transmitters of all time. It is bulky and heavy, but it's also high quality.

In my opinion, it should be owned by a technical person.

5662. FS: Drake TR-7, stock

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-16 16:55:42 UTC
From: k9sqg@aol.com
Message-ID: <20010616125542.29754.00000692@ng-fr1.aol.com>
Source record: 52271

Have a stock TR-7 for sale. Absolutely no mods or options; no noise blanker, no AUX-7 board, no filters, no power supply, and no fan. Just the TR-7 with digital display. It is a very clean unit with 90 watts out on 10 meters and up to 140 watts out on the lower bands. I'd rate the cosmetics at an 8.5-9. Comes with an original owner's manual. Price is $375 plus UPS shipping and insurance.

I am likely to be getting a PS-7 supply so if the TR-7 doesn't sell, I'm going to add the power supply and sell it as a package deal.

Thanks for reading this posting and enjoy those Drakes.

73s,

Evan

Source record: 52275

When using an output meter or audio level meter to do alignments, be sure to disable the avc or turn the rf gain down to the point where the avc does not act or it will dampen the reading on the output meter and it will be hard to see any changes in the tuning that you are doing.

From: Gary Schafer <gschafer@mediaone.net>
Message-ID: <3B2BED7F.DA6096A2@mediaone.net>
Source record: 52276

Mark,

If you can't find one right away you can make it work with the old one assuming that the secondary is still ok. Usually the primary burns out. Put about a 7.5k resistor in the plate of the audio driver tube (and screen, triode connected) then couple to one of the 1625 grids from the plate of the driver with a capacitor. The secondary of the driver transformer connected to the grids as it was will provide the phase reversal for the other 1625. The audio will be a little lower but it will work until you can get a replacement transformer. The DX100 that I have was wired this way when I got it.

Hello--

Alas, Meshna's is apparently well out of business for at least ten years. John Meshna died and his son ran the business for a while but apparently didn't care to continue it.

One of my most memorable surplus-shopping expeditions took me on a tour (escorted by John himself) of the basement of Meshna's Lynn, MA, store. I felt like a field mouse walking through a meadow, but the floor-to-ceiling stacks
weren't meadow grass... just boxed WW II surplus gear!

To this day, I wonder what happened to the contents of his shop....

Hi gang,
What is the group's wisdom on removing a heavy builup of cigarette
smoke residue from the metal and plastic parts of a radio?
Also, this radio has a large sliderule dial plate that is a piece of
plate glass with the dial scale painted (?) on.

Thanks!

72...is that like sort of OK regards? :)

I grew up in a house full of smokers. The best thing I found was Windex. Worked on Ham gear, the TV screen, and especially on the interior of my parents car. Maybe that is why they always liked it so much when I asked to borrow it! (I couldn't stand to drive their car until I removed all the sticky, yucky brown stuff from the upholstry, door panels, headliner, windows, etc. Any wonder that one died of emphysema, and the other from lung cancer?)

Be careful with the sliderule dial, sometimes the paint comes off. Also, sometimes it doesn't. Depending on your radio, there may be a replacement dial made for it. You may want to check this out before you clean the original. Always a good idea to have a "plan B" to fall back on.

Well, I checked out the interstage transformer...the primary has about 1.5 meg resistance across it...seems just a little high. Also, one side of the transformer primary has about 280 volts, the other side has about .1v. So....where do I find a replacement? And...how did it die?

It would be a good plan to copy the dial glass on a scanner or a copy
machine before you do anything. You should be able to make one if push comes
to shove

Bill,

While your statement is generally true, I would strongly advise Netscape
4.7x users to NEVER upgrade to 6.0
or newer, or at the very least, take a look at it off the
machine of some other hapless chap who has done the "upgrade".

6.0 has junked up the interface
with tons of tiny useless icons and thrown away the old
interface scheme for no apparent reason, and slowed down the browser
considerably in the process. So far, I know
of no one who hasn't regretted doing this "upgrade."

Fair warning.

The best stuff I ever found was "the old" Fantastik. They reformulated it
the last few years and it does not do as well. But if you have a 5 year old
bottle lying around you will find it just "melts" the nicotine off.
For knobs, I make a "bath" of "old" Fantastik, water and dishwashing
detergent (to keep the Fantastik from streaking). I allow the knobs to soak
an hour or so and then attack them with an old toothbrush.
Good luck.

5679. Help! FT-902DX (or 901?) Power wiring?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-17 12:38:46 UTC
From: jeffa@ix.netcom.com
Message-ID: <3b2ca334.819810@nntp.mindspring.com>
Source record: 52290

I've purchased an FT-902dm without an AC cable, and the manual copy I ordered, which just arrived, does not specify how the 12 pin "Jones" connector on the back should be wired for AC operation.

The radio is in need of much TLC, but being clueless as to how to even power it up, I can't begin to fix it.

If possible could someone please tell me what the wiring connections are? (Or if anyone knows how the 901dm should be wired for AC - I'm hoping it uses the same connector system as the 902dm).

Thanks!

EICO 710 Grid Dip Meter
In excellent shape with all the plug-in coils, the original box,
and a spare tube.

All for $40.00 plus $5.00 US shipping

5683. Hallicrafters S120 problem? (BFO)

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-17 13:38:45 UTC
From: jwg6@cornell.edu
Message-ID: <9gibt5akv1@news01.cit.cornell.edu>
Source record: 52293
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.boatanchors

Seeking info from anyone who is familiar with the S120 (SW500):

The BFO on my set does not seem to be functioning properly. When BFO is switched on and the control is advanced, SW BC signals seem to come up in strength; then turning the bfo up further produces a pronounced squeal. I'm not sure what is going on here.

When the BFO is turned on, no strong heterodyne/beat signal comes on. At least not like in a typical cw/ssb rcvr. If the bfo is advanced past the "squeal", cw and ssb can be tuned, but the note or audio are very "thin" and not pure-sounding.

Any info or suggestions would be appreciated. Thanks!

5684. FS: 120V AC Magneto Generator

Does the set have a product detector? I suspect not, and that
is why the recovered SSB audio has more distortion than a SSB
receiver would. If it is using a simple diode detector with a BFO,
the BFO will influence the AGC action and signal strength variations.

Shotgun posting forsales to several newsgroups, and especially
including discussion only groups, is indeed SPAM.

Why don't YOU buy up his endless supply of freggin hand crank
generators so we don't have to hear about them on a weekly
basis? It would be appreciated by many.

I am looking for a gen.coverage (1.8-30mhz.is fine) receiver like a
Kenwood R-2000,R-5000,Icom R71,Yaesu FRG100B,etc. Must be in ex.cond. or
better and work 100%. Also...it MUST have a muting jack. I want to use
it with a transmitter.
Pleae let me know what you have and your asking price. Please email me
direct at kf6ikc@webtv.net

Take care,
Stan

If I may comment, please. It's refreshing to see this discussion taking
place.
But surely one encounters these 'moral dilemmas' from time to time in
this 'dog eat dog' and 'you rub my back' world? Eg. You borrow something
and it breaks. You fix it regardless of cost and return it 'better' than

it was before you borrowed right?
A suggestion, if I may. If I particularly wanted an item would it not be moral for me to get an independent evaluation of it, actually the three amateur method will do this anyway, but another outsider not involved in the actual inventory, to comment on how that particular item was valued. Someone the widow would see as independent and trustworthy? It's a rough time as the survivor, I happen to know.
Then I would pay that amount or maybe somewhat more, say 10%, or even it out to the next hundred dollars or something that would be seen to be scrupulously fair or even a little bit too high. Nothing wrong with being considered a little too generous!
Honour (oops, HONOR) would be satisfied and one's conscience would sleep nights?
Handled well the people involved might even manage to get a little more in the way of dollars for the surviving spouse than throwing it on the open (ham) market?
This comment is in good faith.
Terry.

From: jimmoci@aol.com
Message-ID: <20010617114348.07037.00001657@ng-mg1.aol.com>
Source record: 52207

Hello all,
I am offering my Johnson 500 RF Deck up for sale or trade. I bought it as a project a couple years ago without the P.S./Modulator. It was tested on a working PS and seemed fine. After aquiring an old broadcast xmitter the project got shelved and I no longer need the unit. The front panel does have some scratches- I guess overall about a 7 or 8 out of 10 on condition. The case was stripped and powder coated by the previous owner but never painted the original Johnson maroon color. It is now a primer gray color.The chassis is in nice shape and appears original with no hacking or crazy modifications. I also have the original Johnson 500 manual. I want $975 shipped for the unit. I will also take partial trades. I am looking for a Power Supply for a KWM2. I also need a UXR-96 receive module for an ICOM IC-970 VHF/UHF rig. Also needed are two ICOM SP-20 speakers. I am also looking for a Ranger 1 and some Collins equipment. Check out pictures of this Johnson 500 @ http://members.aol.com/~jimmoci/johnson500.html
Thank you & 73
Jim

P.S. For those not familiar with this unit it is just the RF Deck. There is no Power Supply/Modulator. THIS IS NOT A PLUG AND PLAY UNIT. You will need to build or buy a P.S. and modulator to make it work. It is sold as is because it is a 45 year old boatanchor. Thanks!

5698. Re: Hallicrafters S120 problem? (BFO)

Newsgroup: rec.radio.amateur.boatanchors

There is a manual online which I found, and actually, according to that, the "BFO" control is supposed to function as I described earlier. It is used to peak signals on AM, and past the "squeal" threshold it is used for copying CW.

So -- it does not behave like your conventional bfo control as found on other (more substantial) receivers.

I'd be a little stronger than that....don't use Windex on any kind of etched glass dials......it removes the etchings very nicely. There's not a problem using it on the other (clear) side of the class, but be very carefull.

For etched glass dials, I never used anything stronger than warm water, and then I've tried that on a small area first.

I use a diluted solution of Dawn dishwashing detergent and water,
nothing more. It takes off all the "mong" and sticky precipitates
from the smoke. Wash down the rig and then look at the towel.....
YUCK! Just about 2 tsp in a gallon of water. I think the
suggestion about scanning the dial plate it a good one. You'd be
in a far better postion to reconstruct the lettering.

Best luck

Doug, K7YD

I believe this receiver uses an IF stage that is regenerative, when you turn the bfo control on and advance the control the stage approaches the point of going into oscillation. Up to the point of oscillation the stage becomes more sensitive, after reaching the point of oscillation the oscillations are used as the BFO. After you tune in a cw or ssb signal reduce the RF gain and see if that clears it up somewhat.

I use Fantastic and Simple Green. After trying several methods this I found works the best. Just remember to test first. Every radio and every manufacturer used paints and lettering that changed with age, for example: some Rangers and Valiants will loose the lettering at the smell of windex and others won't. You can take the paint and the lettering right off some Hallies with windex or other chemicals. Icom in the 80's used easily removed paint on the lettering of some radios. Even the ever popular Yaesu FT-1000MP has had lettering issues. The best way I found to clean the smoke/grime is to test first and then just soak it down with Simple Green. Wait two minutes and rub it off with a soft towel. After cleaning the shiny shiny surfaces I like to use McGuires paste wax.

Jan 4x150A - make offer

All items plus shipping. If you are interested in an item feel free to make
an offer.
There will be some more items to list, I need to go back in a few weeks and
pick
some more equipment up to sell for her.

Thank you,

Joe

5716. FA: More rare RACAL equipment

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-17 22:07:18 UTC
From: Mark <mark@armscroft.demon.co.uk>
Message-ID: <3B2D2A16.6050801@armscroft.demon.co.uk>
Source record: 52225

Hi folks,

I have placed the following rare RACAL equipment on eBay today.

RA1772 HF receiver -

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1247502855

RA1792 HF receiver -

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1247599469

Speaker -

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1247622581

Check 'em out!

All scarce and in good condition.

Yves,

While 3579 has long been considered the "boatanchor CW" frequency, it
is a terrible choice. Birdies and traffic from Newington plague it making it
tough to enjoy. 3550 has been popping up the last year as a popular
alternative and I have worked hundreds of vintage rigs on that frequency.
3885 seems to reign if AM is your forte.

> windex

Some lettering paint will come off with water or ANY other liquid, so BE CAREFUL. I have a Majestic radio dial whose lettering fell off slicker than a whistle when I gently dabbed it with clear water!

If you remove the dial glass, you may see a few tiny marks (part numbers, for instance) around the very edge of the glass in an area that's not visible when the dial is installed. This would be a safe spot to test whatever cleaning method you are going to try.

If your lettering can't be safely cleaned at all, you can still clean the clear spaces between the painted marks, using Q-tips and a steady hand. This makes quite an improvement in most cases.

Source record: 52242

I picked up a very nice and clean 5100 Transmitter. Status is unknown however it was hooked up in a deceased amateurs station. It looks complete but can not say if it is original or not. I believe there to be several mods. It has been sitting several years and is dusty inside. Chassis is in excellent condition and components look excellent also. Tuning is smooth and all controls feel smooth. Has 110V antenna relay attached to the back. Taking offers. It is HEAVY so prefer local pickup. Because of the weight, I'll connect you with a local packing and shipping company and you can work directly with them. I'll deliver it to them. I'll also trade for a Drake nice TR-4, 4c, 4cw - with PS.

Westley's "Bleche-White" whitewall cleaner *instantly* dissolves nicotine stains, grease, etc. Usual caveats apply; however, I've never had it ruin anything that I wet down with water *before* spraying on Westley's.

You've never seen one without a bunch of holes drilled in the cabinet?
Hmmm. I have. LOTS of Rangers don't have a bunch of holes drilled
in the cabinet top! If one with a bunch of holes is a 9.8, would one
lacking all the extra holes then be a 11.2? 12.4?

Thanks to all that responed to my query. I settled on the
water-ammonia-409 mix, which is working just great. Have not tried the
dial plate yet, but the plastic and metal parts look like new.

If you are a smoker, and want more motivation to quit....clean a
"smokey radio". Blech! I don't know what is worse, the ammonia ala
dirty diaper smell, or the brown sludge that rolls off the parts.

Makes you wonder why someone out there doesn't sell some decent kits. Think
of the manufacturer savings on assembly labor. Bring back Heathkit!!

Are the colors displayed in that Ranger picture correct? I thought there was
some green on Rangers. This one is all grey. Repainted incorrectly?

5745. FS: Mirage D1010 440 brick amplifier, 440 FM beam....

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-19 02:29:52 UTC
From: Arthur Sowers <arthures@magpage.com>
Message-ID: <9gmdf0$rt9$0@216.155.0.50>
Source record: 52105

I have an old D1010 for sale.

10 watts in, 80-100 out. 440 mHZ.

It has no preamp, but two slide switches. One for FM-SSB (controls delay hang), one for power on-off. I don't have any manual for it. I bought it maybe 15 years ago, used it not that much. Recently moved from an area where there was enough 440 activity to warrant its use to an area where there is zero 440 activity even though 440 repeaters are listed. It has SO-239 connectors on back. Heavy stranded copper cables come out backside.

Looking for $80 for this.

440 FM beam for sale:

Also, I have a 10 element 440 FM beam (also with a SO-239 connecting to the gamma match). This was bought a long time ago and always used in an attic where it's still in mint appearance. Its made by HyGain.

Looking for $30 for this.

You pay shipping.

There are lots of great kits available now. Most of them are qrp rigs but they are very nice radios. The closest thing to a Heathkit is probably an Elecraft K2...an extremely nice little radio (HF transceiver), probably runs rings around any Heathkit, performance-wise (and yes, I've built and owned several Heathkit radios...). There are other nice ones from Small Wonder Labs, Ten-Tec, Wilderness Radio, and others. Some of the qrp clubs have come up with some really nice kits as well, particularly The NorCal guys.

They're out there if you look around a little. Not many tube rigs these days, tho...

Usual disclaimers apply...no financial interest in the above, yadda, yadda, yadda...

I thought it was mint just looking at it but I noticed he didn't misrepresent it in his listing and just called it "excellent". I say it is in mint condition, my opinion only, and if it didn't have that minor mod it would be in new condition, not mint. Whatever you call its condition you can't argue with it being a simply beautiful representation of a Ranger II...period. Wish I could afford it sitting on my desk. I too have the holes in my Ranger II (the brother of the brother of the original owner must have done it) but the rest of its condition isn't nearly as nice as that one, especially the inside part. I don't buy on ebay though......yet.

I have a working Swan 500CX/SS-16 special station forsale or trade.
Includes 500CX/ss-16
117XC supply speaker
VX-1 VOX
410C external VFO
22B VFO switch
Good tubes.
Station has some scratches but looks decent. Includes original manual.
Not bad for a 30+ year old radio. Will entertain reasonable offers of trade
or cash. Looking for older SW equipment, older PENTIUM laptops, etc. might
trade for just about anything except your kids or bills.
All items are plus shipping and prefer not to split.
Butch

5768. --> NEED: SCHEMATIC FOR HENRY 2K-3 PS

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-19 22:00:15 UTC
From: BEAR <bearlabs@netzero.net>
Message-ID: <3B2FCB6F.6572B032@netzero.net>
Source record: 52128

Hi!

I'm refurbishing an old Henry 2k-3 amp - I have the upper deck
schematic,
but no power supply schematic. I could trace it, and work on it as is -
but there
are a few parts that have been *replaced* that may or may not be
appropriate
in type or value.

So, anyone who can supply:

a) emailed - scanned copy
b) emailed - PDF (best!!)
c) snail mailed photocopy
or
d) URL to one on the 'net

PLEASE EMAIL TO ME!!
I may not catch your post - since the braindead admins on this system
keep only
3 days maximum worth of posts up. :- (

BTW- If you happen to have any flush mount panel meters (no cut-out
needed, just for the
two meter terminals) of *any value*, let me know too - the original ones

are toasted here.
I'll have to work out a replacement/retrofit if I can't find any flush
mount types)

Thanks,

_-_- bear WB2GCR

If a radio with holes is "excellent" or "mint", what would you call a radio without holes?
Too bad everyone doesn't use the Collins Collectors Association grading system. It can be viewed at "collinsradio.org" and should be adopted more widely. It doesn't matter what adjective you use as long as the buyer and seller assign the same meaning to the words.

Mine is not a II, but has the VOX and grid-block keying factory add-on behind the left side of the front panel. And there is only ONE, small, hole drilled in the top -- not over the VFO slugs, but over the VOX sensitivity pot. Or CW break-in timing pot, whatever that pot is (my manual is for the earlier version). --Mike K. AA1UK

Well, maybe. But time & technologies have changed too. That 'high end' Heathkit probably wasn't as good as many of the kits now. I remember the good old days of Heath & Knight & Collins & Drake & Hallicrafters, etc. too, but current technology makes it pretty easy to duplicate the performance of many of those rigs for a lot less money. Check out the specs & reviews of the K2...it meets or beats radios costing a lot more.

Haing said that, I wouldn't turn down the chance to build another SB-100 or even a DX-60...but it'd be more for the nostalgia than for the performance of the finished product. I wouldn't need a magnifying glass, either... :-)

BTW...a K2 probably has as many parts as an SB-100 and the assembly manual is every bit as good as Heathkits...

I also have one of these rigs with a serial number of 5,100,076 does that qualify it as the "Gold Series" or is there some other special marking on the radio to indicate that it is or is not the Gold Series??.....
thanks for your time in ansering my question.....
good luck in selling your radio....

Damn, I have one of those in an unopened box sitting in the closet. I bought two of them a couple of years ago. Built one and left one alone. Paid $40 for each as I remember. They are not much as far as radios go. Not much more than an AA5 with an RF stage and a SW band. The kit doesn't even come with a cabinet.

I don't understand this one at all. Unbuilt vintage AA5 kits show up on ebay all the time, usually selling for less than a couple hundred bucks. This one doesn't appear to be exceptional in any way -- it doesn't even appear to include a cabinet.

Weird! Maybe the fellow who bought it is a descendent of the original Meissner designer, or something?

That may be true for some equipment, but surely not for all. I mean, look at the current prices for MOST new HF rigs, and look at the prices for MOST new HF amps. I have a friend that picked up a perfectly good SB221 for about $250. Most amps I have seen lately are in excess of a kilobuck for a kilowatt. My friends amp will do legal limit and then some. I, for one, would love to see someone offering good kits for amplifiers. I'd sure like to try my hand at building one. I guess I came along a little too late for that, though....

After visiting here for a while, I've noticed that you've elected yourself as "spam monitor." Did these groups give you this job? I doubt it. One of the reasons I subscribe to magazines and newgroups is to see the ads for whatever. As long as the FS or FA ad is radio related I don't consider it spam. I would suggest that you focus on sex spams or anything not related to radio or electronics, and let the rest of us enjoy the FS and FA for what they're worth. If you continue with your unwanted anti-spam spam (and, yes, what your are doing is a form of spam), I will put you in my killfile as have many others and you will be blowing smoke. We don't need you to decide what we can and cannot view!!!

Get a life, would you!!

>I, for one,
>would love to see someone offering good kits for amplifiers. I'd sure like
>to try my hand at building one

I was born in time -- first station was all Heath and Knight kits, so was my 6m rig.

Trouble is, linear amps consist mostly of a very few big, expensive, parts. The labor to assemble is relatively small compared to the parts cost, so you might not save much on a kit.

OTOH, maybe you would, since those big parts *have* to be assembled by (expensive) human hands, and can't be wave-soldered by robots.

Then there's the FCC type acceptance, and the notion that you might accidentally knock a couple turns off the 21 MHz coil tap while building it :-)

Still, it would be fun, right? 73, Mike K. AA1UK

Hi:

The 565 is plentiful and not worth crying over. A friend picked up 4 of the 560 series scopes at a local swapmeet for $20 - with the plug ins. I have two now that were given to me and both work perfectly. Hopefully someone will want the scope tube as a spare to keep theirs running. Once they go down, they are probably not worth fixing. They were wonderful in their day and still are a fine piece of test instrument - if you can buy them for $25 working and understand they have a very limited bandwidth. Great to replace your Eico or Heath scope with, but they suck at looking a 6 meter signal. A decent scope today will easily look at 2 meter signals.

73, Colin K7FM

It's surely the "only" one that I've seen with six bolts or covers to hide the holes through the top of the case "over the VFO". Mine surely doesn't have that feature! That's UGLY!

5870. Brit needs help with Collins TCS TX

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-22 21:14:38 UTC
From: Roy Gledhill <Look@My.Sig.File>
Message-ID: <auc7jtkeg6tqfeaq2tk8o1r5amrm3v3m2t@4ax.com>
Source record: 52081

Hello from the UK!

I need help in order to bring a TCS-12 transmitter back to life.

This is the story so far.

When the transmitter and matching receiver arrived in the post, I found (but was not dismayed to find) that both had received at some point a "mechanical event" of some description. The transmitter - which I am most interested bringing back to life - had suffered as follows:

- top and bottom right hand front panel screws removed, and lever force applied as if to remove TX from cabinet; result, lost screws and front panel bent like a banana; similar but lesser damage to left side,

- RF ammeter outer case smashed,

- PA current meter loose glass,

- 12A6 valves/tubes loose in case,

- interlock switch fractured,

- tuning capacitor flopping about,

- right-hand cast chassis member totally fractured in half,

- left hand cast chassis member fractured at front bottom corner.

In addition the set had been modified by:

- power connector replaced by octal socket,

- mic/key socket replaced by standard 1/4" jack socket,

- additional jack socket next to replaced one,

- two wires unsoldered from mod transformer,

- Voice/CW switch not original.

I should say that all components seem to be present, and are in very good condition (nice and shiny, etc).

At first I put both sets to one side, until a few months later I spied at a rally/fest/bootsale a complete chassis and front panel, minus all components, for the sum of 5 pounds/7 dollars.

I also had bought, two years ago, a seemingly new PA current meter, complete with transit shorting strap and fixing screws.

I reckoned I had enough parts to restore the mechanical condition. So, one Sunday, when the better half was out, I stripped the TX of broken parts, and replaced them with the spares I had accumulated. I replaced the PA current meter, and used the old meter case to replace the broken RF current meter case. I also replaced the TX case after swapping the shock mounts. After six hours work I had a good-looking clean radio.

Later, I traced the circuit for the heaters and relay supply, and applying 12V found that one 1625 PA valve/tube was o/c. I also located the 220V rail.

I've also done many other small mechanical jobs (such as finding and replacing the retaining collar on the MO switch shaft, which had plenty of fore-and-aft movement) and generally got the TX well back into shape.

Unfortunately, I can't find any connection between the octal pin wiring (labelled 3, the 400V connection) and any circuitry meant to carry 400V.

At this point I can't get any further along the path to recovery. I need at least a circuit diagram, and also a power connector plug and socket, and an original jack socket for the key/mic (I have a T-17 mic), and I also need to know where the two loose wires (from the 1625 modulator grids) connect to the mod transformer.

Please offer any help/guidance you can; parts for these radios (including screws and nuts) are not common here in the UK; and I haven't yet found a web site that sells a TCS manual.

I dearly want to get this radio functioning again. I've been lucky up to now, and I'm in sight of this goal. Over to you!

I had this sold, but the potential buyer ended up being a tire-kicker.
He never saw the rig.
It's complete (the gray cabinet) less tankcoils. All the knobs and
meters are in place.
There is some rust on the cabinet surface, but it is an excellent
restoration project.
It comes with the original manual (covers missing). I think it could be
put on the air quite easily.
I want $300.00 (firm), pick-up only, Tulsa, Oklahoma. I've had this for
many years and always intended to restore it.
However, I now have a bad shoulder and can't lift it.
Thanks!

Perhaps it is an SB 220 with a very ill-advised mod!

What's the best thing to clean up an old boat anchor chassis?

There is no rust, but it is discolored from it's age, and there is a lot of thick grease (probably old contact cleaner?) around the tuning caps.

I've seen some old boat anchor chassis that look clean as mirrors - anyone care to share the secret? :))

John

5892. WTB: Drake MIC PLUGS

Can anyone help me with a couple of RIGHT ANGLED mic plugs to for my Drake TR4C and T4XC?

I only have the straight ones and they stick out a bit.

Please e-mail simon@nomis.co.uk with price etc...

Many thanks

Simon

5897. Re: Mint Johnson Ranger II transmitter

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-23 23:20:38 UTC
From: Larry W9MDX <net1@netohio.com>
Message-ID: <3t9Z6.1293$pe.28491@e420r-atl3.usenetserver.com>
Source record: 52007

I could be a real smart *** here because I've been had by someone who doesn't understand what "MINT" means but I promise not to. Mint is not an opinion. Mint is simply ... "as new" ..., such as a coin that is uncirculated, where the term came from. I know it is a lot to ask that everybody keep on the same page when describing the condition of used electronic equipment and the fact there there are those who say that there is "new" and there is "mint" is the craziest thing I have ever heard! I am going to include the link for you to the CCA rating description so that you can have an idea of how "some" of the old gear is described. Please take a look. Look specifically at "MINT".

Thanks
Larry W9MDX

http://www.collinsradio.com/html/cca_grading.html

PS. Holes drilled in the top of the case and plugged disqualifies it immediately as MINT or even EXCELLENT or even GOOD. It would have a CCA rating of "FAIR". I am not saying that it is undesireable because I have one of these transmitters and I love it and this one is nice ... but I personally
had to buy 4 (yes) four to get one that was fairly represented and worth the $$$ that I paid for it. Three other jokers cheated me out of hundreds of dollars by misrepresenting their Rangers. They all said that they were MINT.

I'll even sell you one that was called mint and I'll give it to you for $195 plus shipping! The guy was so nice that he included the 10 uf oil cap that was connected to it via a wire run through a hole in the case. I'll include it to and then I can say that it meets original factory specifications specifications!

From: leosolon@southslope.net
Message-ID: <3b35dc9f.984522@news.southslope.net>
Source record: 52011

This Hallicrafters SR150 radio has not been used for 15 yrs. Was
given to me. . It has (2) two SR150/120 power supplies that go with
it. The power supplies have been worked on. One has leads for mobile
connect. Looks are good. Radio is dusty and has a very small
scratch on the top where it has probably been hit with a sharp object.
Will ship, but the power supplies are heavy. Radio is not heavy.
Will not say anything works. Tubes have been tested and tested O.K.
Offers , trade, throw out of the car as I pass by your house.
Mike, WQ7L

John:

I have had good luck using GoJo hand cleaner. Use the original, plain white Go-Jo without the pumice and orange perfume. Apply with an old tooth brush and wipe with a paper towels. Go-Jo seems to cut through the dirt, grease, and grime very quickly and does not damage paint or other markings on the chassis or panel. As a bonus, your hands are clean when you are finished!

Best Regards,

Ed
Canyon Lake, TX

5903. Help Identify This Power Supply

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-24 16:26:30 UTC
From: Bruce Stock <stockb@accessone.com>
Message-ID: <WwoZ6.146607$Bz6.61763@sjc-read.news.verio.net>
Source record: 52013

It looks like a typical vintage SSB-rig external AC power supply. Same general circuit configuration as the Heath HP-23, but the transformer is about twice as big as the one on a 23.

No manufacturer's name anywhere, but the model number on the supply is SSB-5.

The no-load outputs are: 930vdc, 450vdc, -144vdc, and 13vac.

It would be nice to know what rig this originally went with, so I can get the actual ratings for the outputs.

Any insights are very much appreciated.

Steve:

The Scott Philharmonic was equipped with 30- or 33-tubes (AM-FM version) and is therefore referred to as the Philharmonic 30 or Philharmonic 33. The earlier Full Range High Fidelity receiver was equipped with 23-tubes and is frequently referred to as the Allwave 23. Each of these receivers had different dials. Which one do you have?

Norman

A friend of mine has found one at an estate sale of a SK. The widow is selling all of the old equipment, but doesn't have the manual for this particular radio. If anyone has this manual in electronic format, or could give me a good explanation of the tune-up process, I would greatly appreciate it. Also, what is a fair price for such a rig? My friend wants the radio, but doesn't want to cheat the widow out of what it is worth. It isn't in the best of condition (at least from it appearance). It has quite a few paint chips, and looks like it has been stored for several years.

Thanks in advance,

JWheeler

In the condition mentioned, no more than 250, if that.
If it's been in 'storage' there is no knowing how many parts have been
crudded up.

I'd rather have a radio that was running at least once in a while.

Dan/W4NTI

Possibly something that used 'sweep tubes'...considering the plate voltage
of 930. Also with that '13v' (12.6??) is another reason.

I'd say either SWAN or a GALAXY suppy. Send me a pic and perhaps can ID it.

5921. Military manuals for trade

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-25 01:00:11 UTC
From: Ron in NC <kc4yoy@pop.trellis.net>
Message-ID: <01c0fd12$00a18d40$4c4c96d0@ron>
Source record: 52031

Hi Gang,

I have the following manuals for trade;

Navy Model TCS Collins Radio, dated April, 1941

U.S. Army Signal Corps, dated 1943
Transmitter Model AVT-112A (RCA)
Receiver Model AVR-20A
Power Supply Model AVA-126A
Antenna System Model AVA-120

Navy Model RCH, E.H. Scott, dated Sept. 1944

All in very good or better condition.

I will trade all 3 for a manual for
Navy AN/FRR-21, AN/FRR-22, AN/FRR-23.

73,

Ron

Not really that crazy. The dishwasher works fine, but you've got to be carefull on what you put into it.

Coils, air variables etc come out very nice. You have to use the heated dry cycle to ensure that ALL water is evaporated. You don't want rust forming.

Alternately, I know of people that will gently clean a chassis with warm running water and let dry in the sun. Again, you need to make sure ALL the water is removed. Also, tape up such things as the transformer openings, IF can tops etc; you don't want water getting into places where it can't be quickly removed.

Don't put etched glass etc in the dishwasher, paper parts etc.

Message-ID: <CYHZ6.1616$1P3.840720545@newssvr17.news.prodigy.com>
Source record: 52038

I'm fortunate enough to have the best stock of NOS power tubes I've had in a long time. These tubes are only going to go up in price as time passes, so if you want NOS, act soon.

Here's some examples of current stock:

(8) 6JE6C/6LQ6 various US made brands, all new tubes, $38.50 ea. Some excellent used on hand for $18.50 ea.

(8) 6JB6A, 7 RCA, one GE branded Zenith, new in the original boxes, $19.50 ea.

(1) 6JS6A RCA, may be new but ??, $24.50

(1) 6JS6B Sylvania, new in the original box, $44.50

(4) 6JS6C, 3 Sylvania & 1 GE, new, may be branded Zenith, some white boxed, $42.50 ea.

(1) 6JS6C Japan made, used tests good, $18.50

(3) 6LF6 GE, NOS/NIB, rare hard to find tubes, one in a white box, $47.50 ea.

(1) 6LX6 GE, new in beat up original box, drop in sub for 6LF6, use with above trio for a nice quad of 6LF6, $38.50

(7) 27LF6 Amperex, absolutely the best of the **LF6 tubes! Huge bottles, incredible quality, all NOS. Three are in white boxes, the other four are in the originals. Rare, hard to find tubes, $44.50 ea., or all 7 for $295.00.

(9) 40KG6/PL509, 5 Amperex, 4 Siemens, beautiful new tubes, all but one in the original boxes, $11.50 ea.

(8) 5998 Tung-Sol (premium higher mu 6AS7G), some look and test new, others are used. Very hard to find ST bottle tubes. Priced at $17.50 for new testing tubes, $9.00 ea. for used.

(11) 6146B/8298A GE, all but two in their original GE boxes, $21.50 ea., $42.50 per pair. (there's more 6146 on my site)

The new genuine 7591A Electro-Harmonix tubes are in stock! $21.50 each single, $44.50/matched pair, and $89.50/quad. Please note: these are NOT repinned 6L6s or 5881s, those tubes were designated 7591XYZ by Sovtek. These are genuine 7591A tubes, and good ones to boot!

(10) 3B28, branded Electronic Enterprises or United Electronics, big 4 pin tube with a large top cap. These are essentially an 866 rectifier but without the mercury vapor. Great looking tubes, new in white boxes, $27.50 ea.

5AR4/GZ34 Sovtek, now in stock. $11.50 ea. (note: the very good 5AR4 China are also in stock at only $8.50 ea.)

(2) 866-A RCA, new in the original boxes, $21.50 ea.
I also have (1) excellent used $11.50

(2) 866AX Amperex, original boxes, new tubes, $16.50 ea.

(1) 872A JAN, 1944 date, General Electronics brand, original beat up box, $49.50

(4) CHY-1616 Hytron, cool 1943 dated US Navy tubes in the original boxes, $6.75 ea.

(100) 12AX7WA JAN Philips, new military stock, an excellent NOS 12AX7! This tube is going to get scarce real soon, as the major wholesaler is running out, the last of the NOS??, $9.75 each.

Shipping is free (USA addresses only) with a >$75.00 purchase. Sorry, still no credit cards, but hopefully soon! Check my site for many more tubes...

Thanks very much!

Jim McShane

5929. BC-348 Problem/fix?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-25 14:33:52 UTC
From: doran platt <doran.platt@noaa.gov>
Message-ID: <3B374BD0.B325888B@noaa.gov>
Source record: 52040

I acquired a second BC-348 at a local hamfest. Cosmetically, it is great. When I fired it up, I noticed that the sens. was about 10uv, pretty bad! I checked out all the regular suspects; tubes, caps, et al, all to no avail (well, maybe some add'l IF gain with a new tube). I then noticed that the gain would pop up on all bands on the lower 20% of the tuning range. Sort of like the L.O. coming to life? I checked out the tuning cap for shorts, etc. but no problems, there. I then noticed a pot mounted on the end of the tuning cap shaft. My book is incomplete, so I couldn't find a discussion of this resistor. Anyway, I loostened it, folded it back and did some measurements. The schematic I have had a notation of something like 3.8K (?). This pot was about 20K for 80% of rotation, then dropped to about 20 ohms. I pulled it apart to see the resistive element. I De-Ok'ed it, etc and re-checked it. Same readings. So, I cut the pot out, joined the affected wires with a nominal 20 ohms. The receiver works just fine, now. Sensitivity is at 1uv or a bit better. Question: What's this pot for? Gain Balance maybe? What value is it supposed to be? Does it have a special taper to it? Thanks for any insights.
de Jeep/K3HVG.

> This sounds crazy but I heard some Heathhit guys removing coils, dials,
> VFO's and using dishwashers.
> I use alcohol and a tooth brush.

Alcohol and a tooth brush is a great solution. Use Q-tips to reach the tight spots. Many other household cleaners can be used -- it's not rocket science! A metal polish can be used to restore some shine if you like that appearance (and depending on exactly what the chassis is made of; some metals shine better than others).

I would avoid the dishwasher unless you had stripped the chassis practically bare. Old boatanchors have parts with wax & paper which were never intended to survive a boiling carwash! Not to mention that you would need to very carefully relubricate everything such as tuning capacitor, potentiometers, etc. It is less destructive and probably less work in the end to clean it by hand.

Phil

5937. Re: BC-348 Problem/fix?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-25 19:05:45 UTC
From: edengel@gvtc.com
Message-ID: <a10ef16b.0106251105.29178ffb@posting.google.com>
Source record: 51947

Doran:

That pot is for gain equalization across the tuning range. According to the
TM, the pot is described as a "Noise Compensator" and it's value is given as
"Variable 3500 ohms +/-10% to 10 ohms, .1 watt." Furthermore, the TM states that
"The characteristic increase of internal receiver noise, when tuning from
low to the high frequency end of a band, has been corrected by means of the
variable resistor(the pot in question). The noise compensator resistor
is mechanically connected to the shaft of the ganged tuning capacitor
with an electrical connection to give minimum resistance at the
low-frequency end of the band." Electrically, the pot is in series
with a 470-ohm resistor in the cathode circuit of the second RF amp.
The manual doesn't mention anything about the taper.

Most of the BC-348 mods that I have seen over the years suggest
removing the pot from the circuit. Basically, just jumper across it.

Hope this helps,

Ed Engelken
Canyon Lake, TX

5938. FOR SALE: National 1-10 receiver w/manual:

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-25 20:13:16 UTC
From: yardleyite@aol.com
Message-ID: <20010625161316.11993.00002212@ng-mq1.aol.com>
Source record: 51948

National 1-10 receiver w/manual. This was National's entry into the VHF field in 1936. Very Very Scarce. It's missing the bottom plate, otherwise complete. Does not have a standard "doghouse" supply but does have a coil in it. It uses the (then) newly developed "acorn tubes". It has the original connector for the power supply but this probably hasn't been plugged in since WW II. The gear driven vernier VFO is smooth and there are no apparent missing pieces other than the bottom cover. The case is clean.
I'm interested in swapping for whathaveyou? Please send all replies directly to my email address.

Hi All,
I have a National NC46 general coverage receiver and matching speaker for sale. Both are in good condition cosmetically and both work well. This receiver was manufactured by the National Co. Malden, Mass. between 1945-1947. Coverage is from .55-30MhZ in 4 bands. It is all original and even has the original warning sticker mounted inside the lid. It has 10 tubes, all test good. The unit works very well on all bands and has recently been serviced. All leaky caps have been replaced and the unit has been aligned. Included in the lot is the matching speaker which works perfcetly. Both pieces are in very good condition. I am asking $150.00 plus shipping from the 07860 zip code.
rgds,
Mark S.

The BN-1 is one of a series of small, battery operated, tube radios
(transceivers and receivers) produced by Western Radio of Kearny, NE.
The BN-1 was aimed at the Novice (hence, the "N") and covered
80/40 Meters, was XTAL controlled, and was battery powered
(hence, the "B"). It was available as a BN-1K (kitform) and also
the BN-1A (improved circuitry). The normal small cabinet was
fiberboard material, although a metal case was available for $3.50!!!

The tube was a dual triode (3A5) that served as the XMTR and RCVR.

You started QRP with a single 45 Volt battery
and could work up to QRO with a couple of 90 Volt batteries.

They normally adversized with small (one colum inch) ads in the
back of Electronics Illustrated and Popular Electronics.
The Western Radio (WESKIT) line also included:

Allband Transceiver (BAB-1)
Six Meter Xcvr (BA6-1)
Two Meter Xcvr (BA2-1)
Citizens Band (C27B)
All Band Receiver (BR-1)

If all this nostalgia peaks your interest, Sheldon Wheaton,
KC 0 CW, has a BN-1 illustrated on his web site at:

http://www.sky.net/~swheaton/bn1.html

[[Thanks, Sheldon!]] :-)

I had one of these as a kit (isn't that always the story); but,
traded it to a local radio shop for a batch of SWL books,
(Actually a good deal at the time - before nostalgia set in!)

If you have one of this cute little rigs you'd like to part
with, drop me an E-Mail at: willi6@erols.com

Is it to much to ask that posters of FA and FS ads give a little description of the item, so we know if it's worth the effort to follow their URL to the auction?

Some of us read our mail and newgroups offline between bulk up/download sessions, and can't just click every time a URL shows up. You want us to bid on your stuff, make it worth our while. Tnx, Mike K. AA1UK

Funny, I was going to post and ask about this sooner or later. I was thinking that at least this de-sense pot should be cut out on the top band, so you wouldn't have it cutting back your RF gain at 17 MHz!

According to my manuals, this acts only on the 2nd RF stage, which is good, but I'm glad someone else has suggested cutting it out completely.

BTW, I think this was used only on the older series BC-348s with the grid-cap tubes and antenna trimmer, like the "R" model. The later "Q" models with single-ended tubes don't seem to have this pot on the tuning cap. So it appears the US Army didn't like losing their edge on the high band either.

Hey.. thanks Ed!! That did it. I wasn't too far off in my assesment. I did jump the pot with 20 ohms.. for lack of a better idea. It's pretty hot now. That old pot was indeed bad. I've never seen a pot do what it was, but all's well in the end. I'm going to have to get a "real" book, one of these days too, I guess. 73 from DC

I have for sale a West German SEM-35 VHF military manpack tranceiver. The
SEM-35 is comparable to the PRC77 in size and performance.
The set is complete with original accessories; backpack harness, handset,
long- and short whip antennas.
Specifications:
26 - 69.95 MHz, 50 kHz channel spacing, 1-Watt output.
It runs from normal D-type cells or from a 24 V vehicle battery. Price
US$160, shipping cost for economy shipping will be US$40 extra. I can Email
picture if interested

==========
Mike:

I believe the original designers of the BC-348 envisioned it being used with the AVC turned off most of the time making the gain equalization feature useful. The BC-348 uses a combination RF/AF gain control and it would have to be readjusted often at you tuned from one of the band to the other. With the AVC on, this gain equalization feature is not needed.

You are correct about the newer BC-348s like the "Q" model not having the gain equalization pot. There are other differences besides the use of single-ended tubes. The newer sets use mica compression trimmers in the front-end instead of air variables like the older versions. The new models also went to point-to-point wiring in place of the board-mounted components. In general, the late model BC-348 were made a bit cheaper. Many of these changes were probably made to speed up the production during the war.

Best Regards,

Ed

5963. FS.RACAL RA1772 HF RECEIVER

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-26 14:38:27 UTC
From: "radio-exports.com" <info@radio-exports.com>
Message-ID: <tjh9djc5c2586b@corp.supernews.co.uk>
Source record: 51974

For Sale RACAL RA1772 HF RECEIVER

Here in the UK,radio-exports.com have for sale an extremely fine example of this high grade,commercial, RACAL HF Receiver.

If you are not entirely familiar with this receiver,the following specification will be of considerable interest.

Frequency coverage is 15kHz to 30 MHz.
Selectivity 13/3/1.2/0.2 kHz -6dB
Image rejection >80dB
Stability +or- 1.5 /10 to the power of 6
IF rejection >80dB
Audio Output 1W 8 ohms.
Modes,AM,SSB,CW,RTTY.
Input BNC 50-75 ohms.

Features.
Headphone Jack,
1.4 MHz IF out.
1MHz I.O. out.
Mute
RF Gain
Speaker (Panel Mounted)
Panel Meter indicating Signal Level,AF Output,RTTY Tune and internal voltage checks.
Local Osc.In/Out
AGC On/Off,Fast,Slow.
Two Tuning Speeds.

Operation is from 110-125 or 200-250 volts ac 45-65 Hz,so the set can be used almost anywhere in the world.

Size is 19" x 7" x 16.14" and the weight is 45 lbs.

Condition of this particular receiver is extremely good.
The front panel is unmarked.
All switches and controls are original,and are correct for this particular Racal model.All are unchipped.

The receiver has been thoroughly tested and is in full working order.

The price of this superb and relatively scarce receiver (especially in this condition), is a very competative $825 US Dollars.

Please note that this price INCLUDES the cost of thoroughly packing the receiver for transit also INCLUDES the cost of Air Freight to the USA.Other

countries quoted with pleasure on request.

If you would like more information or wish to reserve this receiver,please contact:

Graham Leo info@radio-exports.com

Thank you for your interest.

The correct plug/jax are actually .206" in diameter.....same as Collins
used. the right angle style are getting a little difficult to secure,
but I've not had problems getting the standard stright types.

I have recently scanned paper copies of the following Allied (Radio Shack) AX-190/SX-190 SW receiver docimentation:

owner's manual
service manual
73 Magazine reviews and modifications
CQ Magazine reviews and modifications
QST Magazine modifications
NASWA articles
NASWA technical manual (lots of mods)
magazine advertisement

All 100 pages are scanned at 300 or 600 dpi depending upon detail and legibility of nth generation my paper copies. Files are saved as .gif images, about 20MB for all of it.

I am looking for a permanent home for this stuff on a web page or ftp server so people will be able to download at will. If you would like to host the stuff, let me know and I'll send it all to you.

In the meantime, anyone who wants this stuff can send me an email and I'll send as much of it as you want. Check your mailbox size first, please. Alternatively, send me a blank CDR disc, and postage paid return envelope and I'll burn a CD and send it back to you.

I have just purchased an EICO 324 S/G and need a frequency counter if someone has one at a reasonable price.

5971. FS: GREAT DRAKE STATION

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-26 21:33:53 UTC
From: mccrk@aol.com
Message-ID: <20010626173353.06387.00000482@ng-mp1.aol.com>
Source record: 51981

Here's a one-owner Drake station that comes along with original manuals, a spare matched pair of finals and I'll throw in a Shure 444D microphone with three-circuit plug in the microphone's original box.

The station includes a T4X-B transmitter, SPR-4 receiver (with additional not-yet-installed crystals, built-in noise-blanker) MS-4 speaker and power supply in the speaker cabinet. Everything works, and everything is unusually clean for a 30-year-old ham station. The receiver and transmitter have the transceive modules built in, and the transmitter and receiver have crystals for all bands, 160-10. The SPR-4 receiver is unusually sensitive, and the calibration--1 khz--is quite close. I've had this equipment since the early 70s, and I've used it very infrequently. It's in great condition.

I'm asking $900 plus shipping, which, with professional packing, could raise the cost significantly. I would prefer local pickup in the Washington, D.C., metropolitan area.

Steve, W3DEF

Source record: 51990

Hello,
Thanks for reading this post!
I have a late 50s rack transmitter. The power tube is missing so I don't know what it was. The transmitter was setup for 5 band, AM/SSB operation. The panels are silver gray hammertone and they are in good condition.
The PS and Modulator has some rust on the transformers but the chassics looks OK.
I don't know if any of this stuff works or not but I figure the parts are worth about $100.00. Shipping on you or delivery within 150 miles of Springfield, MO.
It has 2 great looking dials and it would make someone a great old homebrew system once its restored .Pic's are available.
E-mail me with questions.
Tnx and 73...John

Howdy

For Sale: Phillips JAN 5763 NOS

Tested and matched on my calibrated TV-7D/U tester. These tubes are New-In-Box and very new looking and testing. Perfect in all regards.

Matched quads (4 tubes) for $15 per set, plus postage. Postage is USPS Priority Mail only (no handling fee). Foreign orders welcome, shipping will be by Small Packet Air Mail.

These tubes are all strong testing and each quad measures within 1 point of each other on my calibrated TV-7D/U.

These are Phillips ECG, USA, white box. Box says 8/85 - perhaps some of THE last tubes made in America??

I guarantee these tubes to test new or your money back.

Here is a picture of one:

I have discovered that page 4 of the service manual for the SX/AX-190
is missing from my approximately 100 pages of stuff.

Page 4 has a diagram showing locations of adjustments and the
procedure for aligning the 455 kHz IF.

Does anyone have a copy of page 4 of the service manual? If you can
scan it and email it to me, or snail mail a paper copy to me, I will
send you a CD with ALL the info on it. If you scan it, please use
either 300 or 600 dpi.

Thanks,

MR

Hi all. I have a LOADED Drake TR-7 with PS-7power supply and external MS-7 speaker in excellent, no-compromise condition that I'd like to trade for a like condition ICOM IC-706 MKII G transceiver.

This TR-7 is cosmetically and functionally outstanding, and has the full complement of 4 filters, NB-7 noise blanker and Aux-7 range module. Manual included.

The TR-7 was the ultimate Drake transceiver; easy to operate and very high-quality construction throughout. On Ebay a TR-7 with these options would fetch upwards of $1000.

Give me a call, let's see if we can do a trade.

Thanks!

5994. Mic connection for late model Viking Ranger TX

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-27 18:40:42 UTC
From: knudsenmj@aol.comOscar
Message-ID: <20010627144042.18603.00001047@nso-ck.aol.com>
Source record: 51855

I've got a Viking Ranger that's the later version with the grid-block keying and PTT subchassis in the upper left front corner. The mic connector is a screw-on type with two hot contacts. I figure the screw shell is common ground, one contact is audio in and the other is PTT to ground. But my manual copy is for the older version, so I have to ask these stupid (?) questions:

1. Is this the correct, original connector? Wiring to it looks factory.

2. Would I be committing BA rape if I replaced it with something more conventional, like a stereo phone jack?

3. OK, who's got a male connector for this that I can put on a mic or use to make an in-line adapter cable? Tnx es 73, Mike K. AA1UK

PS: The rig seems to tune up fine; I just haven't been able to test the modulation, beyond touching the audio contact with a screwdriver and getting a buzz out of the modulation xformer. With a mic hookup, I could put this on the air.

Life is a game. Play to enjoy!

6002. History of Western Radio

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-27 23:18:59 UTC
From: "Peter J. Bertini" <commquart@home.com>
Message-ID: <DRt_6.118023$v5.8918242@news1.rdc1.ct.home.com>
Source record: 51863
Cross-posted to: rec.radio.amateur.boatanchors,rec.antiques.radio+phono

This little company in Nebraska probably graced more
pages in Pop Electronics and other early electronic
hobbyist mags than I would care to count. Can someone
shed some light, or references I could look up, that
highlight the history and products offered by Western Radio
over the years? Are they still going?

6020. NEEDED BA IF Transformer can

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-28 11:54:13 UTC
From: Dale Parfitt <parinc@GTE.net>
Message-ID: <3B3B19C3.299D6D8B@GTE.net>
Source record: 51880

Just acquired a Mosley CM-1 RX, and a previous owner had "chewed" off the top of one of the IF cans. These are 0.8" square and almost 2" tall. This particular one is held on by a clip below the chassis- all fairly common. Does anyone have a similar can- from any radio-that would be willing to sell off a can- transformer is OK, just the can is ruined.

Thanks,

Dale W4OP

Hello Fellow Am'rs
Am again taking Ranger-1 & Ranger-2 panel & cab refinishing. Now with my new screen printing arrangement much faster turn around time. Price for set (cab, pan, bezel, crystal knob) for either $250. exchange or yours.

Viking Valiant-1 refinish, $300. Sorry but had to go up on this radio because of the "hassel". MUCH more time & complexity & material to do.

I NEED TO KNOW: How many of you have a Valiant-2 that you need refinishing. How many need Viking-2 that need refinishing.
Contact me for any details. Check my web page for pics.
Thanks

Just to let you know I also refinish the Hammarlund HQ-180 series radios.
Cot for complete cab & panel is $250. + shipping. Or I can do just the
panel, you do your own cab. $195. + shipping. Finish nr original or better.
If there is enuf interest I will set up to do the HQ-170 radio also. I have
a complete electronic shop & I align Hammar radios. Call for details.

6027. FS: Hammarlund HQ-170

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-28 17:59:05 UTC
From: gene <sop@erols.com>
Message-ID: <01c10012$f24983c0$72362c42@sop>
Source record: 51887

When I was a kid, listening to my Knight Space Spanner, I dreamed of having a real receiver. Well a couple of weeks ago one followed me home from a hamfest. Suffice to say, it looked a lot smaller sitting on the vendors table then it does in my shack. I really wish I had room for it, but it's got to go.

It's not a rare collectable item (that might change if I put it on ebay. grin) Good: It works. It has a clock that also works. There are some new capacitors that have been wired in. All knobs are there and I believe they are original and correct, but I'm no expert. The panel marking is clear and readable and not scratched. It comes with a copy of the manual. Bad: There is one tube shield missing and I don't have one in my junk box to replace it with. Should not be a big deal. There is some tarnish on the chassis, but not real bad. I tried buffing a spot with some 0000 steel wool and the chassis shined up nicely but the black spots were still visible. I really didn't try that hard. If that's important to you, you probably have a technique of your own. There are a couple of rough spots on the top of the case that indicate rust underneith. Not showing, but I know it's there. The front panel has some pinpoint rust spots on it. They weren't/aren't bad enough for me to pass it up. Good/Bad: Depends on your point of view. Bad if you are a collector, good if you are a user, but a previous owner added BNC connectors for the main and 6 meter antenna connections. I guess if it bothered you, you could remove them and put opps buttons (you may call them hole plugs) in the holes.

I'm selling it for what I paid for it plus packaging and shipping costs. I paid $150. I will wrap the receiver in bubble wrap and put it in a new box. That box will be packaged in a larger box with plastic peanuts. I will have to buy the boxes and the bubble wrap, but I have the peanuts. I expect the packaging materials will cost me $7-8. Shipping will be what it costs based on the buyer's shipping preferences.

I'm not a dealer out ripping off widows of SK's at estate sales and trying to get rich on the Internet. Just an impulse buyer that got what he thought was a good deal on an item that he thought he wanted and found he didn't have room for. You can call me in the evenings(Before 10PM EST) at 703.385.9344 (Fairfax, VA) or email me at sop@erols.com.

I think I used 7.5 amp ones in mine but can't remember if that is
right.

I like Chris/Dick's answer better.

From: pete owen <nutmeg@w-link.net>
Message-ID: <3B3BCBA4.FD7CFF40@w-link.net>
Source record: 51896

Got a real BA here. Tektronix model 535a with type CA dual trace plugin for sale. $50, pickup in Seattle; this one is HEAVY. No probes, using them on the new scope. Lots of paper some copies some original Tek.

Haven't used it for a while, used to trigger like a rock, delayed timebase, warms the room when in use.

Please reply direct to nutmeg@w-link.net.

6038. philco model 48-482 f/s

i have a old 48-482 philco radio to sell

it has 3 bands
short wave 9.3 to 15.5 mhz AM
88 to 108 mhz FM
550 TO 1700 KHZ AM

its all here lights up hums a little but no rec
all the tubes grow but somethings out !

i think this dates around 1945 to 48 ?
could be a easy rest-o for someone or lots of parts

$ 50 plus some shippinghelp WT around 25 pds

thanks

Assumming you use the right fuse!! I just obtained a DX-100B, and I checked the fuses before variac tests. From the manual, I figured around 6 Amp fuses would be the max.

The previous owner had 30 A fuses in the plug!! I think there could have been a lot of melting in that case even with the fuse!! Maybe that explains a charred audio driver tranny!!

Always, always, always, check them fuses on newly purchased BA stuff!!

Cleaning out the closet, I have some ARRL Handbooks I no longer need or have room for. They're all in good shape but with some wear...no loose pages or broken spines, tho...

Here's the list...prices include shipping:

1974 - Paperback - $10
1979 - Paperback - $10
1982 - Paperback - $10
1990 - Hardback - $12
1993 - Hardback - $12
1995 - Paperback - $12

I'll take check, money order, PayPal, or cash if you wanna risk it.

Email if interested.

Okay guys - He asked what is the "value" of the two fuses in the plug of a DX-60. I already answered him direct, but:

1) The heathkits of that day:
A) Had a fuse on each leg
B) Only ran two wires.

2) The DX-60, DX-60A, and DX-60B "all" ran with 3A fuses.

Hi Mike,

Yes, that's the original connector...assuming it's on the rear of the radio, bottom left as you look at the back.

Don't change it! Get a connector from Ack Electronics in Atlanta. They stock them, not cheap, but perfect...made by Amphenol.

Yes, Pin 1 is audio, Pin 2 is ground I assume if the PTT mod has been done, it'll work just fine with the two pin connector, if not, you'll have to manually switch from Txmit to Standby.

Larry, N0XB
Viking Ranger Lover

6062. Drake t4x Question

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-30 01:10:39 UTC
From: wb2kjl@aol.com
Message-ID: <20010629211039.19239.00001202@ng-mq1.aol.com>
Source record: 51922

Is it common to have a problem with the relative output meter position? I've got a new used t4x, and it tunes up the old fashioned way, ie dip the plate increase loading... There is good output on a separate watt meter. However I get no reading on the transmitters own relative output meter when I depress the push rod to the right of the meter. Is there a problem with the pot?or the switch?

6063. Drake t4x - another question

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-30 01:46:29 UTC
From: wb2kjl@aol.com
Message-ID: <20010629214629.11618.00003560@ng-fc1.aol.com>
Source record: 51923

Would the IN270 meter detector component be suspect, and where is it located?

Is there a drake message board?

wb2kjl

6064. Nazi multi band receiver at Livermore swap..

Wally and I will be at the Livermore swap meet with the above radio.
Wally picked it up personally at the end of World War 2 and hand
carried it home in his duffle bag. He will also have several wood cased
Weston tube tester for sale to test those 2A3's...
see you there...

6066. FS: B&W 852 Kilowatt tank circuit

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-30 02:40:17 UTC
From: jimmoci@aol.com
Message-ID: <20010629224017.15090.00001003@ng-fj1.aol.com>
Source record: 51926

For Sale: B&W 852 Tank circuit. See pictures online @
http://members.aol.com/jimmoci/bw852.jpg and
http://members.aol.com/jimmoci/contact.jpg
Good shape except one contact. It makes contact but the original type contact
is not there. Someone repaired it and it looks functional but cannot be sure.
$75 packed and shipped to your door in the continental U.S.
Tnx,
Jim

6067. FS: Drake TR-7 and PS-7 excellent

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-30 03:27:44 UTC
From: k9sqg@aol.com
Message-ID: <20010629232744.10981.00001665@ng-ba1.aol.com>
Source record: 51927

Have an excellent condition TR-7 with DR-7 and PS-7 for sale. Includes the original owner's manual. No accessories included but this would be a good base from which to build a complete TR-7 station. $475 plus UPS shipping. Unable to ship outside CONUS.

Enjoy those Drakes.

73s,

Evan

6075. Drake 8 kc filter for TR-7/R-7 "new" FS

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-30 13:41:08 UTC
From: k9sqg@aol.com
Message-ID: <20010630094108.10908.00001701@ng-ba1.aol.com>
Source record: 51935

Have an 8 kc filter that came with a station package that I had bought from a gentleman in California. The filter is excess to my needs. It has never been installed as evidenced by the lack of solder on the terminals and no nicks on the mounting studs and surrounding areas. $75 shipped CONUS only.

Thanks for reading the posting.

73s,

Evan

6076. Re: B&W 852 Kilowatt tank circuit

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-30 14:25:44 UTC
From: "R. Alfred & Gwen Whiting" <gdwhiting@erols.com>
Message-ID: <9hkct8$2ii$1@bob.news.rcn.net>
Source record: 51933

My recollection of the coil is that there was not a contact there originally. B&W sold extra contacts so that you could switch in extra capactance when on 80 meters. I built an amplifier using the coil and added an extra B&W contact. If you get a flurry of mesages trying to buy it, please steer them to me. I have an amplifier of which i am thinking about converting to six meters and ifI do, I won't need the coil-- so I might sell it.

Thanks

Al K3BRS

6077. "RF" people last BBC tonight

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-06-30 16:55:19 UTC
From: Joe <joe.amp@NOSPAMverizon.net>
Message-ID: <Xvn%6.5972$1m4.1095682@typhoon1.gnilink.net>
Source record: 51937
Cross-posted to: alt.guitar.amps,rec.radio.amateur.boatanchors

The BBC broadcasts to the USA Canada and Australia goes silent forever
tonight
8PM eastern time
5975, 6005, *6190*, 9660 kHz
New data base is up (see more frequencies)
http://hfradio.org/hfstation/

I noticed a "spin" in the BBC's reporting since
the new crowd took over.
American issues like race,gun control,social issues etc. are now presented
from a 'holier than thou' perspective.
American reporting is now presented to make us look like dumb colonials and
so forth....
Personally I feel who cares....."The hell with them and there ass
kissing"
Hope the attempt to befriend "Liberal" mainstream flop's
No great Loss tonight !
I also wont be giving up my recently restored and re-XTAL'd R-390 to listen
on a PC in this life.

No loss Joe. In fact maybe some more of those megawatt BS stations will go away. Give us hams more frequency range, such as 40 meters, etc. At least give us more room to bargain with.

Dan/W4NTI
